PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **AI-assisted documentation tooling** using **Claude API** and **prompt engineering** to automate content classification, tagging, summarization, and quality validation workflows; reduced manual documentation review time by **40%** through structured JSON-based constraint guardrails and intelligent content enrichment.
- Built end-to-end **LLM integration pipelines** orchestrating data ingestion, AI processing, and content generation at scale; implemented **RAG (Retrieval-Augmented Generation)** systems to enable Q&A; assistants and AI-driven search experiences over structured content repositories, increasing content discoverability by **65%**.
- Developed **data pipeline transformations** for DITA XML and structured content using **Python (pandas, NumPy)** to chunk, index, and enrich documentation metadata; designed schema-driven transformations ensuring content is semantically structured and AI-ready for downstream consumption by LLM systems.
- Integrated AI capabilities into existing **Git-based content workflows** and **CI/CD pipelines (GitHub Actions, Azure DevOps)** to automate documentation authoring, validation, and publishing without disrupting writer experience; implemented automated link validation and structural consistency checks reducing defects by **55%**.
- Collaborated with documentation leaders, platform engineers, and product stakeholders to define **AI-ready documentation standards**; contributed technical specifications for metadata models, content semantics, and context enrichment to enable reliable AI reasoning over technical content.
- Maintained production reliability of documentation platforms through **monitoring, incident response**, and **performance optimization**; implemented alerting and automated healing for content pipeline failures, achieving **99.5% SLA** uptime for documentation delivery services.

SKILLS

AI/LLM Engineering – Claude API, prompt engineering, RAG pipelines, LLM integrations, AI-assisted workflows, structured JSON prompt design, constraint guardrails.

Languages & Frameworks – Python, TypeScript, JavaScript, Flask, FastAPI, Java Spring Boot.

Data Engineering & Pipelines – ETL pipeline development, data transformation, content pipeline orchestration, Git-based workflows, CI/CD integration, Azure DevOps, GitHub Actions.

Structured Content & XML – DITA XML processing, schema-driven content models, XML parsing and transformation, semantic enrichment, metadata modeling.

Data Analysis & BI – Power BI, Tableau, data visualization, DAX, Power Query, pandas, NumPy, statistical analysis.

Cloud & DevOps – AWS (EC2, S3, Lambda, CloudWatch), Docker, containerization, Linux, shell scripting, monitoring and alerting.

Databases & Query – SQL, PostgreSQL, MySQL, Oracle, data modeling, schema design, ad-hoc query optimization.

EDUCATION AND TRAINING

PROJECTS

AI Documentation Automation Platform (HCL Technologies)

- Architected and deployed an **AI-assisted documentation system** leveraging **LLM APIs** and **prompt engineering** to automate content classification, tagging, and quality validation across enterprise documentation repositories; reduced manual content review overhead by **40%**.
- Implemented **DITA XML transformation pipelines** using **Python** to parse, chunk, and semantically enrich structured content; designed metadata injection workflows ensuring documentation is AI-ready for retrieval, indexing, and reasoning by downstream LLM systems.
- Integrated AI capabilities into existing **Git-based authoring workflows** and **CI/CD pipelines** using **GitHub Actions**; automated link validation, structural consistency checks, and content completeness validation, eliminating **55%** of documentation defects before publication.
- Developed **RAG-powered Q&A; and search assistants** enabling users to discover technical content through natural language queries; improved content discoverability metrics by **65%** and reduced time-to-answer for documentation searches by **50%**.

AI-Powered Resume Generation & Content Workflow Orchestration (Personal Project)

- Engineered end-to-end **LLM-driven content automation** using **Claude API (Anthropic SDK)** with advanced **prompt engineering** and **structured JSON constraint guardrails** to generate tailored resumes at scale; orchestrated multi-stage **AI workflow pipelines** handling content ingestion, transformation, and output generation.
- Built scalable **data pipeline architecture** integrating **Apify web scrapers** → job description ingestion → **Claude LLM processing** → **reportlab PDF generation** → **GitHub Actions CI/CD** → **Vercel deployment**; automated end-to-end content generation reducing manual effort by **90%**.
- Demonstrated proficiency in **API integration, prompt engineering best practices, CI/CD automation, and cloud deployment**; showcased hands-on ability to design, build, and deploy production-grade AI systems that enhance user experience through intelligent content generation.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
