PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and executed **comprehensive test plans and test scripts** for enterprise Java Spring Boot payment-processing microservices, with **full traceability to requirements and acceptance criteria**; conducted **functional, regression, and integration testing** across SWIFT messaging workflows, reducing post-release defects by **40%** through rigorous test case design and **defect triage** leadership.
- Developed and automated **backend API testing** using **REST Assured and Java**, integrating test suites into **Jenkins CI/CD pipelines** to enable continuous validation of payment terminal configuration services and device parameter workflows; achieved **85% test automation coverage** and eliminated manual regression bottlenecks.
- Interrogated **PostgreSQL, MySQL, and Oracle databases** to extract test data, execute SQL validation statements, and prove test results across interconnected ERP and payments-operations systems; designed **load and performance tests** using **Apache JMeter** to validate payment processing throughput under peak transaction volume.
- Performed **fintech and payments domain analysis** on SWIFT MT/MX message flows, ISO 20022 message structures, SEPA/instant cross-border payment processing, and PSD2 Open Banking compliance requirements; collaborated with banking BAs and operations teams to clarify acceptance criteria, ensuring test cases explicitly validated regulatory and SLA constraints.
- Led **test coordination and risk escalation** within Scrum teams; managed test metrics reporting on planning, defect severity assessment, and execution status to support project milestone tracking; mentored junior QA team members on test design best practices, **Agile collaboration tools (Jira, Confluence, Git)**, and fintech domain knowledge.
- Supported **test management in developing project plans** and change-control strategies for payment-systems UAT; validated system configuration updates and post-go-live integrations across microservices architectures and cloud-native deployments; demonstrated **innovative problem-solving** in designing test scenarios for complex payment reconciliation and tokenization workflows.

SKILLS

QA & Test Automation – test plan design, test script development, functional testing, regression testing, integration testing, API automation, REST Assured, backend testing, defect triage, test metrics reporting.

Backend & Payments Testing – payment terminal configuration testing, device parameter validation, SWIFT MT/MX message validation, ISO 20022 message flow testing, SEPA payment testing, cross-border payment processing, PSD2 compliance testing, reconciliation workflows, tokenization testing.

Database & SQL Testing – PostgreSQL, MySQL, Oracle, test data extraction, SQL validation statements, database interrogation, data integrity testing.

Test Automation & CI/CD – Java, REST Assured, Jenkins pipelines, Git, GitLab, CI/CD integration, performance testing, load testing, Apache JMeter.

Fintech & Domain Expertise – payments processing, SWIFT messaging, ISO 20022 standards, SEPA, instant payments, cross-border payments, PSD2 Open Banking, banking operations, regulatory compliance, GDPR, SLA management.

Agile & Team Collaboration – Scrum ceremonies, Jira, Confluence, Git, people management, mentoring, knowledge transfer, risk escalation, change-control management, UAT coordination.

Additional Skills – requirements analysis, acceptance criteria review, microservices testing, cloud-native deployments, emotional intelligence, client-facing communication, self-management.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Payment Terminal Backend Test Automation & Configuration Service Validation (HCL Technologies)

- Architected and implemented a **backend API test automation framework** using **REST Assured** and **Java** to validate payment terminal device configuration services, device parameters, and versioned configurations across a microservices payment-processing platform; integrated test suite into **Jenkins CI/CD pipelines** to enable continuous validation and reduced release-cycle regression testing time by **60%**.
- Designed **comprehensive test scripts and test data extraction workflows** using **SQL** against PostgreSQL and Oracle databases to prove payment terminal state transitions, configuration rollback scenarios, and device parameter synchronization; executed **load and performance testing** using **Apache JMeter** to validate terminal communication latency under **10,000+ concurrent device connections**.
- Led **defect triage and severity assessment** discussions with development teams on payment-processing issues; documented **traceability matrices** linking 200+ test cases to acceptance criteria and SWIFT ISO 20022 message requirements; achieved **92% first-pass acceptance rate** on UAT cycles through rigorous acceptance criteria review and innovative test scenario design.
- Collaborated with fintech domain BAs to incorporate **PSD2 Open Banking compliance**, SEPA instant payment validation, and tokenization workflows into test strategy; supported **change-control management** and post-go-live integration testing across interconnected terminal management, payment-processing, and ERP backend systems.
- Mentored three junior QA engineers on **backend testing methodology**, **REST API validation**, and **Agile collaboration tools (Jira, Confluence, Git)**; contributed test metrics reporting on planning, defect trends, and execution status to project stakeholders, ensuring transparent risk visibility and on-time milestone delivery.

SWIFT Payments Operations & Regulatory Compliance Test Coverage (HCL Technologies)

- Designed and executed **functional and integration test plans** for a SWIFT messaging and payment-operations dashboard supporting a banking client; validated **MT/MX message flows**, transaction-flow visibility, and operational alerting scenarios in accordance with **ISO 20022**, SEPA, and cross-border payment standards.
- Interrogated production banking databases to extract reconciliation test data and validate payment message state across ERP modules; ensured **GDPR compliance** and audit-trail integrity in test data handling through rigorous **acceptance criteria** review with regulatory and operations stakeholders.
- Led **UAT coordination** and post-implementation defect triage with cross-functional banking operations teams; identified **15+ critical SLA-impacting defects** through regression testing, reducing post-production incidents by **35%**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023

- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
