PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and delivered **full-stack, cloud-native Java Spring Boot microservices** with **RESTful APIs** and **React** frontends, handling **distributed systems** integration across **AWS** (EC2, S3, Lambda, CloudWatch) and achieving **99.5% uptime SLA** in production.
- Integrated **Large Language Models (LLMs)** and **generative AI capabilities** into enterprise applications using **Claude API (Anthropic)** and prompt engineering, orchestrating end-to-end **AI workflow automation** with structured JSON constraints and guardrails for scalable product features.
- Built and operationalized **IoT telemetry ingestion pipelines** processing device events and sensor data via **AWS Lambda** and **EventBridge**, implementing **device status monitoring**, health alerting, and **edge computing** patterns for smart building integrations with **sub-second latency**.
- Architected **data pipelines** using **Python** (pandas, NumPy, scikit-learn) and **SQL** to gather, analyze, and synthesize insights from large, diverse datasets; built **Power BI dashboards** and **Tableau visualizations** for operational reporting, reducing manual data synthesis by **60%**.
- Executed production incident response and troubleshooting using **Splunk**, **Dynatrace**, and **CloudWatch** observability tools, identifying hidden problems in logs and system behavior; reduced mean-time-to-resolution (MTTR) by **35%** through proactive pattern analysis and automated alerting.
- Deployed containerized applications using **Docker** and orchestrated CI/CD pipelines via **Jenkins**, **GitHub Actions**, and **Git** branching strategies; implemented infrastructure-as-code practices with **Kubernetes** manifests and **Helm** charts for reliable, secure application delivery.

SKILLS

Backend & System Design – Java Spring Boot, Python, microservices architecture, RESTful APIs, distributed systems, system design, application development.

AI & Machine Learning – Large Language Models (LLMs), generative AI productization, Claude API, prompt engineering, PyTorch, TensorFlow, scikit-learn, Hugging Face, RAG-style retrieval, workflow orchestration.

IoT & Device Management – IoT architectures, telemetry ingestion, event processing, device status monitoring, device health tracking, smart building systems, edge computing patterns, device management protocols, IoT security best practices.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch, EventBridge), Docker, Kubernetes, Helm, CI/CD (Jenkins, GitHub Actions), cloud-native development patterns, event-driven architectures.

Data Engineering & Analytics – SQL (PostgreSQL, MySQL, Oracle), data pipelines, ETL, data warehousing, distributed computing (Spark), Power BI, Tableau, pandas, NumPy, data modelling, exploratory data analysis.

Observability & Operations – Splunk, Dynatrace, CloudWatch monitoring, production incident management, SLA management, system reliability, operational stability, logging analysis.

Frontend & Full-Stack – React, Angular, TypeScript, modern UI frameworks, full-stack feature development, user experience integration.

EDUCATION AND TRAINING

PROJECTS

SWIFT Messaging & Payments Operations Dashboard (HCL Technologies)

- Engineered production-grade **full-stack application** integrating **SWIFT messaging** (MT/MX formats), **ISO 20022 message flows**, and **SEPA** payment processing with **Java Spring Boot** backend and **React** frontend, delivering real-time **transaction-flow visibility** and **operational alerting** for banking client.
- Implemented **microservices architecture** with **RESTful APIs** for interconnected system integrations (ERP modules, legacy enterprise business systems) across **PostgreSQL** and **Oracle** databases, ensuring **data accuracy** and **regulatory compliance** (GDPR, audit trails) across cross-border payment flows.
- Deployed **Splunk** and **Dynatrace** observability solutions for production monitoring, SLA management, and **P1/P2 incident response**; conducted root-cause analysis on payment processing anomalies, reducing operational incidents by **40%** through proactive pattern detection and alerting rules.

Ireland Jobs Tracker – AI Resume Generation Engine (Personal Project)

- Architected end-to-end **generative AI workflow automation** integrating **Claude API (Anthropic)** with **structured JSON prompt engineering** and constraint guardrails, generating JD-tailored resumes at scale using **claude-haiku-4-5** model with **99.2% accuracy** on formatting and content alignment.
- Built **full-stack application** orchestrating data flow from **Apify web scrapers** → job description ingestion → Claude-powered content generation → **reportlab PDF** generation, deployed via **GitHub Actions** CI/CD pipeline and **Vercel**, handling **1000+ resume variants** per week.
- Demonstrated hands-on expertise in **LLM productization**, **prompt engineering**, **AI workflow orchestration**, and **cloud deployment patterns**; applied advanced Python scripting and API integration techniques directly applicable to LLM/generative AI integration in enterprise products.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
