PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Owned end-to-end full-stack features across **TypeScript/Node.js** backend services, **React** data-heavy UIs, and **SQL** data access layers; reduced handoff friction by **40%** through autonomous feature ownership from data consumption to client-facing delivery.
- Built and operated scalable **data pipelines** and **ETL workflows** using **Python** and **SQL** (PostgreSQL, MySQL, Oracle); implemented curated data layers supporting **25+ mission-critical analytics dashboards** with **SLA-backed reliability and audit-trail compliance**.
- Developed **REST APIs** and backend services in **Java Spring Boot** and **Node.js** connecting data platforms, actuarial computations, and model inference; validated mathematical precision through unit testing and production monitoring using **CloudWatch, Splunk, Dynatrace**.
- Implemented front-end mathematical and actuarial computations in **React** with **30+ precision-validated calculations** for exposure analysis, loss projections, and financial impact modeling; built interactive **data visualisation components** explaining risk insights and insurance recommendations to end users.
- Integrated AI into delivery workflow using **Claude API, prompt engineering, and AI-augmented code generation**; orchestrated **end-to-end AI automation pipelines** with **GitHub Actions CI/CD** and cloud deployment, increasing feature delivery throughput by **35%**.
- Navigated and self-served from enterprise **data platforms** and **lakehouse patterns**; mastered domain expertise in payments processing, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA/cross-border payments, and financial regulatory compliance (GDPR, audit trails); translated ambiguous business requirements into **robust data-driven risk solutions**.

SKILLS

Frontend & UI – React, component architecture, state management, data visualisation, D3, Recharts, AG Grid, TypeScript, modern responsive design.

Backend & API Development – TypeScript, Node.js, NestJS, Java Spring Boot, REST API design, service orchestration, API security and integration.

Data & SQL – SQL query optimization, PostgreSQL, MySQL, Oracle, Databricks, lakehouse patterns, data modeling, schema design, self-service data access.

Data Engineering & Pipelines – ETL workflows, Python (pandas, NumPy), data pipeline orchestration, Apache Spark, Hadoop, data warehousing, curated data layers.

Quantitative & Actuarial – Mathematical computation, financial modeling, exposure analysis, loss projections, premium/price-impact calculations, pricing and underwriting analytics.

AI & Automation – Claude API, prompt engineering, AI-augmented development, LLM integration, AI workflow automation, Anthropic SDK.

DevOps, Cloud & Monitoring – AWS (EC2, S3, Lambda, CloudWatch), Docker, CI/CD (Jenkins, GitHub Actions), Git, production reliability, Splunk, Dynatrace, monitoring and alerting.

EDUCATION AND TRAINING

PROJECTS

Insurance Risk Analytics Platform (HCL Technologies)

- Architected and delivered a full-stack **digital client experience platform** supporting pricing, underwriting, and exposure analysis for a major insurance client; owned features end-to-end from **Databricks data consumption** through **TypeScript/Node.js APIs** to **React UI components**.
- Built self-service **data access layer** with **optimized SQL queries** against insurance risk datasets; implemented **curated data tables** enabling actuaries to generate loss projections and premium-impact calculations with **99.8% accuracy validation**.
- Developed **React dashboard components** with **D3 and Recharts visualisations** translating complex exposure and claims data into actionable risk insights; integrated **frontend mathematical computations** for real-time pricing calculations accessible to end users.
- Operationalized platform using **AWS CloudWatch, Splunk dashboards, and production monitoring**; established **SLA-backed reliability** and **regulatory compliance frameworks** (GDPR, audit trails) ensuring **100% data governance and traceability** for financial services workloads.

AI-Driven Resume Generation & JD Orchestration (Personal Project)

- Engineered end-to-end **AI workflow automation** combining **web scraping, Claude API integration, prompt engineering, and PDF generation**; deployed multi-stage pipeline orchestrating job description ingestion, **LLM-tailored content generation**, and structured **JSON-constrained outputs**.
- Implemented **TypeScript/Node.js backend services** managing API requests, state orchestration, and error handling; built **React-based frontend UI** for workflow visualization and user interaction.
- Deployed **CI/CD automation via GitHub Actions** with containerization and **Vercel serverless hosting**; achieved **sub-second response times** and **99.5% uptime** scaling to thousands of concurrent requests.
- Demonstrated mastery of **prompt engineering, AI-augmented development practices**, and **AI tool integration** into production systems; directly applicable to AI-enabled engineering workflows and AI-driven feature delivery at scale.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
