PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **distributed REST APIs** in **Python** using **Flask and FastAPI** running in **Docker** containerized environments to provide Finance and Middle Office teams access to centralized datasets; reduced data retrieval latency by **40%** and increased API throughput to **10K requests/minute** across portfolio accounting systems.
- Built **integration components** communicating with **Kafka streaming platforms** and **event-based distributed systems** to coordinate complex business processes across portfolio accounting, corporate accounting, and back office systems; processed **500K daily messages** with **99.95% delivery guarantee** using event-sourced architecture.
- Developed **data architecture components** for centralizing data definitions with **data governance frameworks** and stakeholder alignment; implemented **SQL database optimization** across **PostgreSQL and Oracle** schemas to support fund account technology and partnership accounting workflows, reducing query execution time by **35%**.
- Collaborated with Finance, Middle Office, and Operations teams to gather business requirements, translate technical requests into system design, and deliver REST API integrations supporting **distributed workflows** for accounting of different financial products; conducted UAT coordination and post-go-live support with **zero critical incidents** in first 90 days.
- Implemented **DevOps practices** across the Finance Technology platform: automated **testing at all levels** (unit, integration, end-to-end) within **CI/CD pipelines** using **Jenkins and Git**; containerized Python microservices with **Docker**, deployed to **AWS infrastructure (EC2, Lambda, CloudWatch)**, and owned application monitoring and support with **SLA compliance of 99.8%**.
- Engineered **cloud-native distributed systems** on **AWS** leveraging **Docker containerization** and **serverless Lambda** functions for data pipeline orchestration; integrated **multi-system data flows** via **REST APIs** and event-driven architectures to consolidate portfolio and fund accounting data, enabling real-time visibility for **15+ downstream stakeholders**.

SKILLS

Languages & Core Development – Python, Java, SQL, Object-Oriented Programming.

Integration & Distributed Systems – REST APIs, Kafka, event-based systems, Flask, FastAPI, distributed workflows, messaging architectures.

Database Development – PostgreSQL, MySQL, Oracle, data modelling, schema design, database optimization.

DevOps & Cloud Native – Docker, containerized environments, AWS (EC2, S3, Lambda, CloudWatch), CI/CD pipelines, Jenkins, Git, cloud-native development.

Data & Analytics – Data architecture, data governance, data warehousing, Power BI, Tableau, pandas, NumPy, scikit-learn.

Frontend Development – Angular, React, JavaScript frameworks, UI development.

Finance & Back Office Domain – Portfolio accounting technology, fund account technology, partnership accounting, corporate accounting, back office systems, financial product knowledge.

EDUCATION AND TRAINING

PROJECTS

Finance Data Integration Platform – Kafka, REST APIs & Distributed Workflow Orchestration (HCL Technologies)

- Architected and deployed a **cloud-native distributed system** integrating **Kafka event streams** with **REST API microservices** in **Docker containers** running on **AWS** to centralize portfolio accounting, corporate accounting, and partnership accounting data across **12+ upstream business systems**.
- Designed **data architecture components** with **data governance frameworks** to standardize data definitions across finance teams; implemented **distributed workflows** orchestrating complex multi-system processes including fund account reconciliation, tax reporting triggers, and real-time partnership accounting updates with **zero message loss**.
- Built **REST APIs** in **Python (FastAPI)** providing secure, role-based dataset access to Finance, Middle Office, and Operations teams; integrated **event-based communication** via **Kafka topics** for asynchronous processing of **500K daily accounting transactions**, reducing data staleness from **4 hours to <12 minutes**.
- Implemented comprehensive **DevOps practices** including automated **testing at all levels**, **CI/CD pipeline** automation in **Jenkins**, **Docker containerization**, and **AWS Lambda** functions for scheduled data pipelines; achieved **99.95% uptime SLA** and enabled **self-service deployments** for platform engineers.
- Collaborated with business stakeholders to translate accounting requirements into technical specifications; conducted UAT and post-implementation support, documenting **data governance policies** and **API integration guides** for **20+ downstream stakeholders**.

Real-Time Payments Operations Dashboard with ISO 20022 Message Flow Tracking (HCL Technologies)

- Engineered a **REST API-driven monitoring dashboard** for SWIFT messaging and payments operations supporting **cross-border payment flows**, **SEPA instant payments**, and **ISO 20022 message format processing**; delivered transaction-flow visibility and operational alerting to banking client's Middle Office, reducing **payment exception resolution time by 55%**.
- Integrated **production support monitoring** using **CloudWatch** and **Dynatrace** to track **ISO 20022 message flows** end-to-end with audit-trail compliance; implemented **real-time alerting** for **P1/P2 incidents** and SLA management across **10M daily payment messages** in regulated banking environment with **GDPR and data protection** requirements.
- Collaborated with banking-domain Business Analysts and operations teams for requirements gathering and UAT coordination; documented reconciliation workflows, tokenization concepts, and **PSD2 / Open Banking** compliance controls, enabling seamless post-implementation support across interconnected ERP and payments systems.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
