PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and built **REST API backend services** using **Python Django** and **Spring Boot**, implementing core business logic for payment operations dashboards and enterprise workflow systems; achieved **99.8% API uptime** through comprehensive error handling and request validation across 50+ endpoint integrations.
- Developed **PostgreSQL and MySQL relational database schemas** with optimized queries for transaction-flow visibility and data validation; reduced query latency by **35%** through indexing and query refactoring while maintaining ACID compliance for financial-services regulatory requirements.
- Implemented **CI/CD pipelines using Jenkins, Git, and Docker containerization** to automate code review, testing, and deployment workflows; reduced deployment cycle time by **40%** and enabled daily releases across staging and production environments for high-velocity feature delivery.
- Collaborated with senior engineers and cross-functional teams to troubleshoot bugs, optimize application performance, and implement product architecture improvements; delivered **28 production features and reliability enhancements** in Agile sprint cycles while maintaining clean, well-tested code standards.
- Built and maintained operational dashboards and monitoring solutions using **Splunk and CloudWatch** for SLA management and P1/P2 incident response; implemented alerts and data pipelines that reduced mean-time-to-resolution (MTTR) by **45%** for critical payment-processing workflows.
- Supported document management and workflow systems for regulated banking and legal-content environments; wrote **Python automation scripts and ETL processes** for data transformation and scheduled reporting, ensuring compliance with GDPR and financial-services audit trail requirements across interconnected enterprise systems.

SKILLS

Backend Development – Python, Django, Spring Boot, REST APIs, asynchronous programming, type hinting.

Database & Data Engineering – PostgreSQL, MySQL, SQL query optimization, relational schema design, data validation.

Frontend & Full Stack – React, Angular, JavaScript, responsive web design.

DevOps & Infrastructure – Docker, containerization, Jenkins, Git, CI/CD pipelines, AWS (EC2, S3, Lambda, CloudWatch).

Monitoring & Observability – Splunk, Dynatrace, CloudWatch, application performance monitoring, SLA management.

Domain & Workflow Systems – Document management, XML processing, workflow automation, SWIFT messaging (MT/MX), ISO 20022, SEPA, regulatory compliance (GDPR).

Development Practices – Agile/Scrum, code reviews, change management, troubleshooting, performance optimization.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Legal Content Workflow & Document Management Platform (HCL Technologies)

- Architected and developed a full-stack **Django + PostgreSQL + React** platform for managing and transforming legislative and regulatory content workflows across government and standards-body clients; supported **3 major client deployments** with zero post-go-live critical incidents.
- Implemented **XML processing and transformation pipelines** using Python to parse, validate, and normalize regulatory documents; automated content ingestion reduced manual data-entry overhead by **60%** and improved compliance audit-trail completeness to **100%**.
- Built RESTful backend APIs and interactive **React frontend components** for document status tracking, workflow state management, and stakeholder notifications; end-users completed document-review cycles **3.2x faster** compared to legacy systems.
- Deployed multi-tier application on **AWS (EC2, RDS) with Docker containerization** and automated **Jenkins CI/CD pipelines** for blue-green deployments; enabled daily releases and reduced deployment risk through comprehensive automated testing and change-control governance.
- Integrated with upstream legal-content management systems via **REST APIs and PostgreSQL data flows**; coordinated UAT with cross-functional BAs and compliance teams to ensure regulatory data accuracy and GDPR-compliant audit logging for all client interactions.

SWIFT Payments Operations Dashboard & Monitoring System (HCL Technologies)

- Enhanced production monitoring and incident-response capabilities for a banking-client **SWIFT messaging platform** using **Splunk and CloudWatch**; real-time dashboards tracked transaction-flow visibility, payment-message status, and SLA compliance across **\$2B+ daily transaction volume**.
- Designed automated alerting rules and custom **Python ETL data pipelines** for ISO 20022 message parsing and SEPA/cross-border payment validation; detected and escalated **P1 incidents within 90 seconds**, reducing failed-payment recovery time by **50%**.
- Collaborated with banking-domain BAs and operations teams on requirements gathering and UAT coordination; documented payment-processing workflows, reconciliation logic, and regulatory compliance controls (GDPR, PSD2, ISO 20022 standards) in Confluence knowledge base for operational support teams.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
