PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed, developed, and maintained **CI/CD pipelines** using **Jenkins** and **GitHub** across enterprise Java/Spring Boot and Python microservices; automated build, test, and deployment workflows reducing deployment time by **40%** and enabling **15+ daily releases** in production environments.
- Built and maintained **Infrastructure as Code** configurations using **Terraform** for **Microsoft Azure** cloud environments, provisioning compute, storage, networking, and containerized workloads; integrated **Azure DevOps** pipelines with artifact repositories for secure, repeatable infrastructure deployments.
- Supported **Kubernetes-based deployment workflows** including **Helm charts** for containerized application orchestration; managed Docker image builds, registry integrations via **JFrog Artifactory**, and Kubernetes manifest versioning to ensure reliable, scalable production rollouts.
- Implemented **secure delivery practices** across CI/CD pipelines including **SSO** integration, role-based access management, container image security scanning, and artifact signing; collaborated with security partners to enforce compliance gates and regulatory audit trails in financial-services production environments.
- Troubleshoot and resolved complex **build, pipeline, and environment issues** across multi-environment deployments (dev, staging, production); diagnosed failures in Jenkins workflows, Azure resource provisioning, and Kubernetes deployments; reduced incident resolution time by **35%** through automated diagnostic runbooks and monitoring dashboards.
- Leveraged **AI tools** including **Claude API** for infrastructure documentation generation, automated runbook creation, and DevOps workflow optimization; engineered prompt-based solutions to accelerate operational documentation and reduce manual toil across platform engineering initiatives.

SKILLS

CI/CD & Automation – Jenkins pipelines, GitHub, Azure DevOps, TeamCity, artifact repositories, JFrog Artifactory, build automation, deployment scripting.

Infrastructure as Code & Cloud – Terraform, Microsoft Azure (VMs, App Service, Container Registry, Key Vault, networking), Azure Portal, infrastructure provisioning, configuration management.

Kubernetes & Containers – Kubernetes orchestration, Helm charts, Docker containerization, image registries, container networking, stateful and stateless workload management.

Secure Delivery & Compliance – SSO integration, access management, role-based access control, container image security scanning, artifact signing, audit logging, regulatory compliance practices.

Programming & Scripting – Python automation, Bash shell scripting, REST API integration, Git version control, Linux system administration.

Monitoring, Logging & Observability – CloudWatch, Splunk, Dynatrace, operational dashboards, alerting, SLA management, incident response.

AI Tools & Workflow Automation – Claude API, prompt engineering, AI-driven documentation, LLM workflow orchestration, automation frameworks.

EDUCATION AND TRAINING

PROJECTS

Enterprise CI/CD Modernization & Kubernetes Migration (HCL Technologies)

- Architected and deployed end-to-end **CI/CD pipeline modernization** for enterprise Java Spring Boot microservices, migrating from legacy Jenkins jobs to **Azure DevOps** with templated, reusable pipeline definitions; integrated **GitHub** for source control and **JFrog Artifactory** for artifact management across 20+ production services.
- Designed **Kubernetes deployment workflows** using **Helm charts** to standardize application releases; established pod security policies, resource quotas, and **container image scanning** gates; reduced deployment errors by **50%** and enabled zero-downtime rolling updates for mission-critical banking systems.
- Implemented **Infrastructure as Code** in **Terraform** to provision and manage **Azure** resources (compute clusters, networking, storage, container registries); created reusable modules for multi-environment deployments (dev, staging, production) with automated testing and plan reviews; reduced infrastructure provisioning time from **2 weeks to 2 days**.

AI-Powered DevOps Automation & Documentation Platform (Ireland Jobs Tracker)

- Built an AI-driven platform integrating **Claude API** (Anthropic) with **GitHub Actions** CI/CD workflows to auto-generate infrastructure documentation, operational runbooks, and deployment guides at scale; engineered structured-JSON prompts with constraint guardrails for consistent, policy-compliant documentation output.
- Orchestrated end-to-end automation: web scraping → job description ingestion → **Claude API** analysis → structured artifact generation (markdown, YAML, JSON) → **GitHub Actions** validation → **Vercel** deployment; demonstrated practical application of **AI tools** in routine DevOps development activities.
- Implemented security-first automation patterns including artifact signing, version control integration, and audit logging; validated generated content against compliance templates and regulatory requirements, ensuring AI-generated documentation met financial-services audit standards.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
