PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and maintained **infrastructure monitoring and observability** across virtual and physical environments at HCL Technologies using **Splunk, CloudWatch, and Dynatrace**; reduced mean-time-to-resolution (MTTR) for P1/P2 incidents by **35%** through automated alerting and SLA-driven incident response protocols.
- Automated infrastructure provisioning and operational workflows using **Python scripting, shell scripting, and cron jobs** on **Linux** systems; deployed **20+** production automation scripts for log analysis, data validation, and scheduled reporting across enterprise environments.
- Provisioned and managed **AWS infrastructure** including **EC2, S3, Lambda, and CloudWatch**; containerized applications using **Docker** and orchestrated deployments via **Jenkins CI/CD pipelines**, improving deployment frequency by **40%**.
- Applied DevOps practices to support production systems handling business-critical payments and financial transactions; collaborated with trading systems teams to troubleshoot infrastructure issues, validate system configurations, and execute change-control procedures in **high-availability, SLA-critical environments**.
- Developed and executed infrastructure testing and validation protocols for enterprise business systems and ERP integrations; coordinated UAT support and post-implementation infrastructure triage, ensuring **zero unplanned downtime** across interconnected systems.
- Demonstrated problem-solving and data-driven reasoning by analyzing system performance metrics, logs, and operational dashboards to identify root causes and implement infrastructure improvements; communicated technical findings clearly to non-technical stakeholders and cross-functional teams.

SKILLS

Infrastructure & DevOps – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, infrastructure provisioning, virtual environments, physical infrastructure, change-control management, monitoring and observability.

Scripting & Operating Systems – Python, shell scripting, Linux, cron jobs, log analysis, automation, operating systems fundamentals.

CI/CD & Version Control – Jenkins, Git, GitHub Actions, CI/CD pipelines, code reviews, Jira, Confluence.

Databases & Data Systems – PostgreSQL, MySQL, Oracle, SQL, data validation, schema changes.

System Support & Troubleshooting – production support, incident management, SLA management, problem-solving, root-cause analysis, infrastructure troubleshooting, networking fundamentals.

Trading & Financial Systems – payments operations, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA, cross-border payments, PSD2, business-critical environments, regulatory compliance (GDPR), tokenization.

Collaboration & Communication – cross-functional team collaboration, requirements gathering, technical documentation, Agile/Scrum, stakeholder communication.

EDUCATION AND TRAINING

PROJECTS

Production Infrastructure & Incident Management – SWIFT Payments Dashboard (HCL Technologies)

- Designed and operated monitoring infrastructure for a **mission-critical SWIFT payments-operations dashboard** supporting a major banking client; configured **Splunk, CloudWatch, and Dynatrace** to track message flows, transaction status, and operational health with real-time alerting.
- Managed P1/P2 incident response and infrastructure escalations in a **business-critical, SLA-driven environment** handling cross-border payments, SEPA transactions, and instant payments; implemented automated recovery procedures and root-cause analysis workflows to meet **99.95% uptime SLA**.
- Collaborated with banking-domain operations teams, business analysts, and infrastructure stakeholders to troubleshoot infrastructure issues, validate system configurations, and execute change-control procedures across interconnected payment systems and ERP integrations.

Infrastructure Automation & DevOps Pipeline – Enterprise Java/Spring Boot Application Support (HCL Technologies)

- Developed and deployed **Python automation scripts and Jenkins CI/CD pipelines** to provision **AWS infrastructure (EC2, S3, Lambda)** and orchestrate application deployments; containerized enterprise Java/Spring Boot services using **Docker** and managed infrastructure-as-code practices across development, staging, and production environments.
- Implemented automated log analysis, data validation, and scheduled reporting workflows using **shell scripting and Python** on **Linux** systems; reduced manual operational overhead by **45%** and improved incident detection latency through proactive monitoring dashboards.
- Conducted infrastructure testing, UAT support, and post-go-live infrastructure triage for enterprise business systems and ERP integrations; applied problem-solving and data-driven analysis to identify performance bottlenecks, optimize resource allocation, and ensure zero unplanned downtime across interconnected systems.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
