PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Owned end-to-end feature delivery across **Java Spring Boot** microservices and **Python** automation tools, writing technical specs and acceptance criteria that engineering shipped without rework; prioritized backlogs using **Jira** and data-driven customer impact analysis, reducing feature delivery cycle time by **30%**.
- Built data-driven product decisions using **SQL** queries on **PostgreSQL** and **MySQL** to analyze funnel conversion, churn signals, and usage patterns across enterprise applications; embedded analytics dashboards in **Power BI** and **Confluence** for cross-functional visibility, eliminating gut-feel prioritization.
- Shipped **REST API** integrations and system interconnections across **AWS** services (**EC2, S3, Lambda, CloudWatch**) and enterprise business systems, coordinating with engineering and operations teams to validate specifications and measure post-launch performance within **SLA** targets.
- Applied **machine learning** and **statistical analysis** (Python **scikit-learn, NumPy, pandas**) to identify product opportunities in transaction-flow data; modeled churn and usage patterns to inform feature prioritization, improving product-market fit signals by **40%**.
- Translated customer requirements and go-to-market strategy into detailed product specs and UAT coordination across interconnected systems; documented feature design in **Confluence** and drove cross-functional alignment with design, engineering, and operations in Agile/Scrum ceremonies.
- Demonstrated technical fluency by reading and reviewing **Docker** container configurations, **CI/CD Jenkins pipelines**, and **Git** branching strategies; assessed AI/ML opportunities in production monitoring dashboards using **Dynatrace** and **Splunk**, identifying **3 automation-first features** that reduced manual investigation time by **45%**.

SKILLS

Product & Analytics – end-to-end feature ownership, backlogs prioritization, spec writing, acceptance criteria, customer discovery, data-driven decision making, funnel analysis, churn modeling, product strategy.

Technical & Data – SQL, Python, REST APIs, Java Spring Boot, PostgreSQL, MySQL, AWS (EC2, S3, Lambda, CloudWatch), Docker, CI/CD, Git, Jenkins, Jira, Confluence.

Analytics & BI – Power BI dashboards, DAX measures, data modelling, Tableau visualizations, Power Query ETL, statistical analysis, hypothesis testing, exploratory data analysis.

Machine Learning & AI – scikit-learn, supervised learning, unsupervised learning, regression, classification, model evaluation, feature engineering, churn prediction, usage analytics.

Enterprise & Systems – ERP integrations, change management, UAT coordination, system interconnections, ISO 20022 message flows, payments processing, SEPA, cross-border workflows, GDPR compliance, production support, SLA management.

Communication & Collaboration – cross-functional stakeholder management, technical documentation, Agile/Scrum ceremonies, customer engagement, business requirement translation, presentations to non-technical audiences.

EDUCATION AND TRAINING

PROJECTS

AI-Powered Connectivity Usage Analytics & Feature Recommendation Engine (HCL Technologies)

- Designed and shipped an end-to-end product feature that used **machine learning (scikit-learn clustering and regression)** to forecast customer API usage patterns and recommend cost-optimization features; wrote technical specs defining data pipelines, model evaluation metrics, and customer-facing recommendations.
- Built underlying analytics infrastructure using **Python pandas/NumPy** to process transaction and API-call datasets from **AWS CloudWatch** and **PostgreSQL**; created **Power BI** dashboards to visualize model performance and churn-risk signals for product and go-to-market teams.
- Coordinated feature launch across engineering, design, and customer success; conducted **A/B testing** and measured impact—**adoption rate of 62%** among target cohort, **18% reduction** in customer churn within 90 days post-launch, and **\$2.4M in identified annual savings** for enterprise customers.
- Demonstrated rapid context-switching by moving from architecture design to UAT coordination to post-launch analytics; adapted **REST API** contracts based on customer feedback, iterated on **Docker** containerization for scalability, and maintained **SLA compliance** at **99.8%** during peak usage.

SWIFT Payments Operations Dashboard – Regulatory Compliance & Real-Time Monitoring (HCL Technologies)

- Owned product specifications for a mission-critical dashboard serving a Tier-1 banking client, translating requirements around **ISO 20022 message flows**, **SEPA instant payments**, and cross-border transaction visibility into technical acceptance criteria for engineering teams.
- Implemented data layer using **SQL** queries on **Oracle** to surface transaction-flow visibility, reconciliation status, and regulatory audit-trail data; embedded **Dynatrace** and **Splunk** metrics to monitor **SLA** breaches and alert operations teams to **P1/P2 incidents** in **<2 minutes**.
- Ensured **GDPR** compliance and data governance across feature specs; coordinated UAT with banking-domain BAs and regulatory stakeholders, reducing post-go-live production issues by **78%** through detailed spec clarity and cross-functional alignment in **Confluence** and Agile ceremonies.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
