+353 89 970 6156 • hariramakrrish@gmail.com • Dublin, Ireland • **Stamp 1G — Full-Time Work Eligible**

PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Designed and implemented a **web application** for monitoring quantum job execution, including searchable job views and operational control features, directly addressing the need for a unified system for engineering and support teams.
- Developed a **Python-based ETL pipeline** to ingest and process operational data from multiple sources, enabling the creation of comprehensive dashboards for platform health and usage visibility.
- Authored **Java Spring Boot code** to build REST APIs for integrating the new operations platform with existing engineering ticket systems, ensuring seamless data flow and cross-service communication.
- Collaborated with senior engineers to define system architecture, including data flows, API specifications, and security models, presenting and defending the design before production code implementation.
- Wrote unit and integration tests for the web application's backend services, covering failure paths and ensuring code quality through rigorous testing strategies and **Git-based code reviews**.
- Containerized the application's services using **Docker** and configured deployment pipelines, aligning with the company's practices for separated environments and secure credential handling.
- Documented the system architecture, local setup procedures, and deployment configurations, creating a handover package for future teams and enabling effective troubleshooting for live issues.

SKILLS

Core Languages – Python, Java, JavaScript, TypeScript

Web Technologies – React, FastAPI, Node.js, NestJS, HTML, CSS

Databases – PostgreSQL, Relational Databases

Cloud & DevOps – AWS, Docker, Kubernetes, CI/CD, Git

Tools & Platforms – Jira, Confluence, Splunk, Dynatrace

PROJECTS

Quantum Platform Operations Dashboard

- Designed and built a **full-stack web application** to provide a single pane of glass for monitoring quantum job lifecycles, enabling engineers to investigate failures and manage live jobs.
- Implemented a **searchable and filterable job view** using React frontend and a PostgreSQL backend, allowing for quick identification of specific job runs and their associated statuses.
- Developed backend services in **Python/FastAPI** to ingest and aggregate data from disparate platform components, creating a unified view of system health and operational metrics.

Automated Job Failure Analysis Tool

- Engineered a **Python service** that automatically correlates job failures with engineering tickets, reducing manual investigation time by approximately 40% for the support team.
- Integrated with **PostgreSQL** to store historical job data and failure patterns, facilitating trend analysis and proactive identification of recurring issues within the quantum platform.
- Developed **REST APIs** to expose job status and analysis results to other internal tools, enhancing system-wide observability and diagnostic capabilities.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
