PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Developed and maintained **Java Spring Boot** REST APIs for inter-service communication, processing approximately 500 requests per minute during peak hours.
- Automated data extraction and transformation tasks using **Python scripts**, reducing manual reporting effort by an estimated 15 hours per week for the operations team.
- Managed production incidents for enterprise applications, performing root cause analysis and implementing fixes within strict SLAs, contributing to a 97% incident resolution rate.
- Designed and implemented **Power BI dashboards** to visualize key performance indicators for financial reporting oversight, enabling stakeholders to track 25 critical metrics.
- Supported cross-system integrations between ERP modules and operational platforms using **SQL** (PostgreSQL, Oracle) for data validation and schema updates, ensuring data consistency across 4 interconnected systems.
- Collaborated with business analysts and operations teams on a **payments operations dashboard**, focusing on transaction monitoring and alerting for over 3,000 failed payment messages monthly.

PROJECTS

Financial Reporting Dashboard Enhancement (HCL Technologies)

- Developed a suite of 12 interactive **Power BI dashboards** aggregating financial data from disparate sources, improving reporting efficiency for the client's finance team.
- Engineered **Power Query** data transformations to clean and standardize transactional data, ensuring accuracy for key financial metrics and reducing data preparation time by 40%.
- Applied **DAX measures** to create complex calculations for financial ratios and trend analysis, directly supporting quarterly financial reporting oversight.

Automated Transaction Reconciliation System (MSc Project)

- Built a **Python**-based system to automate the reconciliation of transaction logs against financial statements, processing datasets of approximately 150,000 records.
- Implemented robust **SQL** queries against a PostgreSQL database to identify discrepancies and generate exception reports, improving reconciliation accuracy by 22%.
- Designed data models and utilized **pandas** for efficient data manipulation and analysis, ensuring the integrity of the reconciliation process.
