PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Developed and maintained **Node.js** microservices for a global digital asset platform, handling approximately **4,000 real-time transactions** per hour during peak loads.
- Engineered **high-availability backend systems** in **JavaScript**, ensuring resilient infrastructure for mission-critical wallet operations with an average incident resolution time of **35 minutes**.
- Implemented robust **backend security principles**, including secure coding practices and API authorization, to protect sensitive user data and digital assets.
- Designed and optimized **MySQL and MongoDB** schemas and queries for efficient data storage and retrieval, supporting complex wallet synchronization workflows.
- Collaborated with cross-functional international teams in a **remote Agile environment** to gather requirements and deliver backend solutions aligned with evolving product needs.
- Investigated and resolved backend performance issues across distributed systems, proactively identifying opportunities for optimization and improving system reliability by **15%**.

SKILLS

Backend Development – Node.js, JavaScript, Microservices Architecture, Distributed Systems, REST APIs, Peer-to-Peer Technologies, Decentralized Systems, Blockchain

Databases – MySQL, MongoDB

Security – Backend Security Principles, Secure Coding Practices, API Authorization

Cloud & Infrastructure – AWS, Docker, Linux

Development Practices – Agile Methodologies, CI/CD, Git, Jenkins, Code Reviews

Monitoring & Observability – Splunk, Dynatrace, CloudWatch

PROJECTS

Decentralized Wallet Infrastructure (HCL Technologies)

- Designed and built scalable backend services using **Node.js** and **NestJS** to support secure user wallet operations and digital asset management.
- Integrated with **PostgreSQL** for robust transaction logging and state synchronization across a distributed microservices architecture.
- Implemented authentication and authorization mechanisms to ensure the security of user assets and sensitive data, reducing unauthorized access attempts by **90%**.

Real-Time Transaction Processing Pipeline (HCL Technologies)

- Developed Python scripts to automate the ingestion and processing of high-volume transaction data, handling up to **3,500 events** per second.
- Built monitoring dashboards using **Splunk** to track system health and identify bottlenecks in the payment processing workflow, reducing critical alert response times by **20%**.
- Collaborated with operations teams to define alert thresholds and triage issues, ensuring timely resolution for failed or stalled transactions.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
