PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Designed and implemented idempotent ingestion patterns for core banking transaction data, processing ~4,000 events per hour with robust error handling and replay strategies.
- Built event-driven pipelines to integrate data from payments and card systems into a central data lake, supporting near-real-time operational monitoring.
- Developed batch processing patterns for end-of-day GL extracts and regulatory reports, ensuring data accuracy and completeness for downstream consumers.
- Created canonical domain models for key entities such as accounts, transactions, and ledger entries, establishing 'golden sources' for financial reporting.
- Implemented automated data quality rules and monitoring for core banking datasets, defining SLOs and SLIs to track pipeline health and timeliness.
- Participated in incident response for production data pipelines, conducting root-cause analysis and implementing improvements to enhance operational resilience.

SKILLS

Core Banking & Data Engineering – Ledger Data Modelling, Transaction Data Modelling, Idempotent Ingestion, Event-Driven Pipelines, Data Lake, Canonical Models, Data Lineage, Reconciliation Controls, Regulatory Reporting

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), GCP, Azure, Docker, Kubernetes

Data Processing & ETL – SQL (PostgreSQL, MySQL, Oracle), Python (Pandas, NumPy), Power Query, Data Warehousing, Micro-batching, CDC

Streaming & Messaging – Kafka, Pub/Sub

Observability & Operations – Logging, Metrics, Tracing, Runbooks, Incident Response, RCA, SLOs/SLIs

Languages & Development – Java, Spring Boot, Python, SQL, REST APIs, Git, Jenkins

Databases – PostgreSQL, MySQL, Oracle

PROJECTS

Core Banking Transaction Reconciliation Engine (HCL Technologies)

- Developed a Java Spring Boot service to ingest and reconcile transaction postings from multiple sub-ledger systems against a central ledger, validating ~15,000 transactions daily.
- Implemented robust data quality checks for completeness and validity on incoming transaction streams, identifying and flagging 98% of malformed records before processing.
- Designed and built REST APIs for operational teams to query reconciliation status and investigate discrepancies, reducing manual inquiry time by 40%.

Financial Operations Data Pipeline Automation (HCL Technologies)

- Engineered Python scripts to automate the generation of daily reconciliation reports and audit trails for a financial services dashboard, processing data from PostgreSQL and Oracle databases.
- Created scheduled ETL jobs using cron and shell scripts on Linux to extract, transform, and load financial data into a reporting data mart, ensuring timely data availability.
- Integrated Splunk for log aggregation and monitoring of the data pipeline, enabling proactive identification of job failures and performance bottlenecks.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
