PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Designed and implemented **statistical models** for insurance pricing and fraud risk, incorporating **linear regression** and **logistic regression** techniques to analyze historical data.
- Developed and maintained **Python scripts** for data extraction, transformation, and loading (ETL) to prepare large datasets for analytical processing, handling the merging of multiple data sources.
- Constructed **Power BI dashboards** to visualize complex analytical results, translating technical findings into clear, actionable insights for non-technical business stakeholders.
- Collaborated with internal partners in Product, Sales, and Technology teams to provide technical support and analytical consultation, ensuring data-driven decision-making across product lifecycles.
- Performed **statistical analysis** on insurance claims data using **R**, identifying key risk factors and contributing to the refinement of underwriting processes.
- Researched and evaluated new analytical technologies and methodologies, presenting findings to the data science group to inform and enhance current modelling **best practices**.
- Containerized analytical applications using **Docker**, deploying them to **AWS EC2** instances for scalable and reproducible model execution and analysis.

SKILLS

Programming Languages – Python, R, SQL

Data Science & ML – Statistical Analysis, Predictive Modelling, Data Mining, Regression (Linear, Logistic), Model Evaluation, Machine Learning

Data Visualization & BI – Power BI, Tableau, DAX, Power Query

Cloud & DevOps – AWS (EC2, S3, Lambda, CloudWatch), Docker

Databases – PostgreSQL, MySQL, Oracle

Tools & Methodologies – Jira, Confluence, Git, Jenkins, Agile/Scrum

PROJECTS

Insurance Risk Modelling with Python and R

- Developed Python-based feature engineering pipelines to extract relevant variables from large insurance datasets, preparing data for predictive model training.
- Trained and evaluated a **logistic regression model** using **scikit-learn** to predict customer default risk, achieving an AUC of **0.82** on a validation set of 150,000 records.
- Created a **Power BI report** that visualizes model performance and key risk drivers, facilitating stakeholder understanding of underwriting recommendations.

Customer Underwriting Analytics Dashboard

- Built an interactive **Power BI dashboard** to present key underwriting metrics and customer risk profiles, supporting an enterprise analytics team.
- Integrated data from multiple sources using **Power Query** and performed data modelling to ensure consistent reporting across different insurance lines.
- Provided ad-hoc analytical support to the business team, answering questions on data integrity and contributing to UAT for new dashboard features.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
