PROFESSIONAL EXPERIENCE

Software Engineer — HCL Technologies, Chennai, India

Sep 2021 – Jan 2025

- Engineered a **Java Spring Boot** microservice to manage user authentication tokens, integrating with an external identity provider and handling approximately 5,000 requests per minute.
- Developed and maintained a **Java Persistence API (JPA)** repository layer for an enterprise application, abstracting database interactions for core business entities across PostgreSQL and Oracle databases.
- Designed and implemented **JUnit** and **Mockito** tests for critical business logic modules, increasing code coverage by **28%** and reducing post-deployment defects by **15%**.
- Participated in the full software development lifecycle for hyper-scale distributed services, including design, implementation, testing, and deployment within the Azure cloud environment.
- Investigated and resolved complex, global-scale service issues, analyzing logs from **Splunk** and **Azure Monitor** to improve resiliency and reduce latency for core authentication flows.
- Championed engineering best practices by conducting thorough code reviews for peer engineers, focusing on code quality, performance, and adherence to security standards for critical identity services.
- Containerized backend services using **Docker** and deployed them to an Azure Kubernetes Service (AKS) cluster, managing configurations and resource allocation for improved stability.

SKILLS

Languages – Java, Python, C#, C++, JavaScript

Cloud Platforms – Azure (AKS, Azure Monitor, Azure AD), AWS (EC2, S3, Lambda, CloudWatch)

Databases – PostgreSQL, Oracle, MySQL, SQL

Frameworks & Libraries – Spring Boot, Java Persistence API (JPA), JUnit, Mockito, pandas, NumPy, scikit-learn

Tools & Technologies – Docker, Kubernetes, Git, Jenkins, Jira, Confluence, Splunk

Methodologies – Agile, Scrum, CI/CD

PROJECTS

Distributed Identity Service with Java Spring Boot

- Developed a **Java Spring Boot** application to manage user identity and access control for an internal enterprise platform, serving over 10,000 API requests daily.
- Implemented a **RESTful API** for identity management operations, including user registration, authentication, and authorization, ensuring secure data handling with TLS encryption.
- Containerized the service using **Docker** and configured deployment pipelines in **Jenkins** for automated builds and testing on AWS EC2 instances.

Python-based Data Pipeline for System Monitoring

- Engineered a **Python** data pipeline to ingest logs from various enterprise applications into a centralized monitoring system, processing approximately 1.5 GB of data per hour.
- Automated log aggregation and basic anomaly detection using **pandas** and **NumPy**, reducing manual analysis time for the operations team by **20%**.
- Developed scheduled reporting scripts that generated daily summaries of system health metrics, delivered via email to operations stakeholders.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin

Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India

2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
