PROJECTS

Real-Time Payments Transaction Monitoring System

- Engineered a Java Spring Boot backend service to process and monitor high-volume financial transaction messages, ensuring **99.95%** uptime and identifying processing anomalies.
- Developed automated alerting mechanisms using Python and **SQL** queries against a **PostgreSQL** database to flag failed or delayed transactions, reducing manual oversight by **50%**.

- Integrated with existing enterprise systems via **REST APIs**, providing a unified view of transaction flows and supporting reconciliation workflows within a strictly audited production environment.

Operational KPI Dashboard for Sports Betting Platform

- Built an interactive dashboard using **Power BI** and **DAX** to visualize key performance indicators for trading operations, enabling stakeholders to track real-time betting volumes and risk exposure.
- Developed data models and ETL processes using **Power Query** to aggregate data from multiple sources, ensuring data integrity and providing a single source of truth for reporting.
- Collaborated with product and quant teams to define data requirements and deliver timely insights, directly supporting strategic decision-making for the betting and gaming business unit.
