PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Resolved infrastructure incidents with a sense of urgency across Apple's multi-vendor enterprise network, coordinating with global internal teams and external service providers to maintain **24x7x365** operational continuity and SLA compliance; delivered clear and concise incident updates while managing P1/P2 escalations across interconnected systems.
- Operated and maintained large-scale **LAN/WAN network infrastructure** using **Cisco, Arista, Palo Alto, and Fortinet** product portfolios; performed troubleshooting, upgrades, and configuration changes to bring network components to current standards across Apple's multi-site global backbone.
- Designed and deployed **network automation** workflows using Python scripting and shell automation to reduce manual operational overhead; orchestrated data pipelines and scheduled monitoring tasks across distributed network nodes, driving operational excellence and repeatable processes.
- Collaborated cross-functionally with network operations teams, security groups, and external partner organizations to coordinate troubleshooting, resolve complex routing and layer 2 protocol issues, and align on change-control procedures for large-scale **IPv4, IPv6, and BGP** deployments.
- Developed and maintained comprehensive technical and procedural documentation for network operations, including incident playbooks, configuration guides, and known-issue databases; created clear runbooks for on-call engineers to support follow-the-sun global support model.
- Leveraged **AI technologies and network automation frameworks** to enhance network monitoring and alerting; integrated Claude API-driven intelligent systems for anomaly detection, configuration validation, and predictive incident response across enterprise network infrastructure.

SKILLS

Network Infrastructure & Protocols – IPv4, IPv6, BGP, layer 2 technologies, LAN/WAN networking, large-scale global backbone networks.

Network Vendor Platforms – Cisco, Arista, Palo Alto, Fortinet, network device configuration and troubleshooting.

Network Automation & AI – Python scripting, shell automation, network orchestration, AI workflow automation, Claude API integration, intelligent monitoring systems.

Operational Support & Incident Management – 24x7x365 operations, SLA management, multi-functional team coordination, global partner collaboration, incident prioritization and resolution.

Enterprise IT Systems – change-control management, cross-system integrations, production monitoring, documentation and procedure development.

Data & Analytics – Power BI dashboards, operational reporting, ETL pipelines, data modeling, statistical analysis.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker containerization, Linux, Git, Jenkins CI/CD.

EDUCATION AND TRAINING

PROJECTS

Enterprise Network Operations Dashboard (HCL Technologies)

- Designed and deployed a real-time **network monitoring and incident dashboard** for Apple's global enterprise network infrastructure, integrating multi-vendor data sources from **Cisco, Arista, Palo Alto, and Fortinet** devices across large-scale LAN/WAN topology.
- Built automated data ingestion pipelines using **Python scripting and ETL workflows** to aggregate **IPv4, IPv6, BGP, and layer 2 protocol metrics** from distributed network nodes; normalized and validated data quality across heterogeneous vendor platforms.
- Created operational dashboards in **Power BI** with DAX measures and Power Query transformations to visualize network health, incident trends, and SLA compliance metrics for global operations teams; enabled 24x7 on-call engineers to prioritize infrastructure incidents with a clear sense of urgency.

Network Automation & AI Orchestration Platform (Personal Project)

- Built an end-to-end **network automation and AI workflow orchestration system** leveraging **Claude API (Anthropic)** to generate network configuration recommendations, anomaly detection rules, and intelligent incident-response playbooks for enterprise infrastructure at scale.
- Engineered **structured-JSON prompt engineering** and constraint guardrails to tailor network configuration outputs for multi-vendor environments; integrated Apify data scrapers for real-time network state ingestion and Claude-driven intelligent analysis for predictive incident detection.
- Orchestrated full-stack deployment pipeline using **GitHub Actions CI** and **Vercel** to publish configuration recommendations and operational runbooks; demonstrated hands-on **AI technologies, network automation, and prompt engineering** expertise directly applicable to modern enterprise network operations.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
