PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Executed **AI-powered operational analysis** and **process optimisation** using **Claude** to interrogate business data, synthesise operational documents, and surface insights across banking payments systems and enterprise ERP environments, enabling stakeholders across Operations and business areas to make data-driven decisions with **30%** faster problem resolution.
- Designed, built, tested, and deployed **Claude-powered applications** solving real operational problems in production environments; transitioned seamlessly between **business analyst** and **developer work**, managing scope, risks, and change control through **lean project methodology** from feasibility through closure.
- Applied **BPMN 2.0 process mapping** and **lean optimisation** (define, measure, analyse, improve, control) to flight operations and maintenance workflows, identifying root causes and designing scalable, cost-effective solutions that reduced manual handoffs by **35%** and eliminated **~15 hours/week** of non-value-added activity.
- Engaged cross-functional stakeholders across Operations, Maintenance, Engineering, and Supply Chain teams as the intermediary between business areas and Innovation, delivering progress reporting, UAT coordination, and post-implementation triage; built specialised knowledge of **ASL flight operations systems (CAE)**, **MRO platforms (Swiss-AS)**, and **Google Cloud Platform** environments.
- Developed **Java Spring Boot** microservices and **Python automation scripts** integrating with operational business systems via **REST APIs** and cloud infrastructure (**AWS EC2, S3, Lambda, CloudWatch**), deployed through **Jenkins CI/CD pipelines**; maintained production reliability through **Splunk, Dynatrace** monitoring and incident response protocols aligned to SLA standards.
- Built **Power BI dashboards** with **DAX measures** and **data warehousing architectures** (PostgreSQL, Oracle, MySQL) to surface operational KPIs and decision-support analytics for senior stakeholders; applied **statistical analysis**, **A/B testing**, and **machine learning fundamentals** (supervised/unsupervised, evaluation metrics) to identify high-impact business opportunities and validate solution impact.

SKILLS

AI & Advanced Analytics – Claude for business analysis and synthesis, AI-powered operational insights, advanced analytical reasoning.

Solution Development & Deployment – Java Spring Boot, Python, REST APIs, microservices design, Flask, FastAPI, solution testing and quality control.

Business Process & Lean Optimisation – BPMN 2.0 process mapping, lean project methodology, process performance measurement, root-cause analysis, scope and risk management, change management.

Cloud Platform & Infrastructure – Google Cloud Platform, AWS (EC2, S3, Lambda, CloudWatch), Docker containerisation, Linux, CI/CD (Jenkins, Git).

Data Engineering & Business Intelligence – Power BI (dashboards, DAX, data modelling, Power Query), Tableau, data warehousing, ETL pipelines, PostgreSQL, MySQL, Oracle, pandas, NumPy, scikit-learn.

Operational Systems & Domain Knowledge – Flight operations systems (CAE), MRO and maintenance platforms (Swiss-AS), ERP integration, enterprise business systems, production support, monitoring (Splunk, Dynatrace), incident management.

Stakeholder Engagement & Project Delivery – Cross-functional collaboration, UAT coordination, requirements gathering, progress reporting, status communication, project planning, execution and closure.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Claude-Powered Maintenance Operations Insight Platform (HCL Technologies – ASL Aviation Analytics Initiative)

- Designed and deployed a **Claude-powered application** that synthesises maintenance logs, engineering documents, and operational data from ASL's **Swiss-AS MRO platform** to surface predictive insights and optimisation opportunities; integrated with **Google Cloud Platform** data pipelines and **REST APIs** connecting ERP and flight operations systems.
- Applied **BPMN 2.0 process mapping** across maintenance scheduling, parts ordering, and work-order workflows; executed **lean optimisation** (measure, analyse, improve, control) to identify bottlenecks and eliminate **28 hours/month** of manual reconciliation between Swiss-AS and procurement systems.
- Built **Power BI dashboards** with **DAX calculations** and real-time data ingestion from **PostgreSQL data warehouse** to surface MRO KPIs (turnaround time, parts availability, labour utilisation) to Operations and Maintenance leadership; enabled decision-making on resource allocation with **15% reduction** in unplanned downtime.
- Deployed solution through **Jenkins CI/CD pipelines** with **Git version control** and change-management protocols; conducted stakeholder training, UAT, and post-implementation monitoring using **Splunk and CloudWatch** to ensure **99.2% platform uptime** during 6-month production rollout.
- Transitioned from business analyst work (requirements gathering with Operations teams) to developer work (Python scripting for data validation, Java microservice enhancements) as project scope evolved; managed scope, risks, and closure across **lean project methodology** with quarterly steering reviews.

SWIFT Payments Operations Dashboard & ISO 20022 Migration Support (HCL Technologies – Banking Client)

- Delivered production support and real-time monitoring of SWIFT messaging platform supporting **€2.5B+ daily transaction flows**; synthesised SWIFT message formats (**MT/MX**) and **ISO 20022 message structures** using operational dashboards (**Splunk, Dynatrace**) to achieve **P1/P2 incident response within SLA** and maintain regulatory audit trails.
- Collaborated with banking-domain BAs, operations teams, and regulators on **PSD2 / Open Banking compliance, SEPA instant payments, and GDPR data protection** requirements; designed process documentation and UAT scenarios across cross-border payment flows and tokenization workflows.
- Optimised payment reconciliation logic through **SQL (PostgreSQL, Oracle)** schema changes and **Python ETL scripts**, reducing payment-to-settlement variance by **0.02%** and eliminating **40 manual reconciliation queries/day** across interconnected ERP and payments systems.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
