PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Monitored and triaged **AWS and Azure cloud events** using **Splunk** for log analysis and threat detection, dispositioning security cases and escalating critical incidents to control partners with **99.2% SLA adherence** across enterprise production environments.
- Identified and mitigated **cloud security threats** across **IaaS, PaaS, and SaaS** environments by analyzing suspicious activity patterns, AI utilization anomalies, and jailbreak attempts, reducing false-positive alert volume by **40%** through alert tuning and threshold optimization.
- Conducted **vulnerability triage and reporting** on critical cloud misconfigurations and exposures using **AWS Security Hub** and **Azure Security Center**, coordinating remediation workflows with incident response and vulnerability management teams to achieve **95% closure rate within SLA**.
- Analyzed **cloud-native security incidents** and threat intelligence using **Splunk** and **Log Analytics** to understand attack patterns, articulate threats specific to AWS, Azure, and GCP environments, and document security control gaps across **150+ cloud assets**.
- Updated and maintained security documentation across cloud infrastructure changes, tooling updates, and emerging threat vectors; created runbooks and playbooks for incident response teams covering **12+ attack scenarios** and reducing mean time to response (MTTR) by **35%**.
- Collaborated with incident response teams, Red/Purple team operators, and threat intelligence researchers to validate detection capabilities, design security hunts, and validate cloud control effectiveness across production AWS, Azure, and hybrid enterprise environments.

SKILLS

Cloud Security & Monitoring – AWS Security Hub, Azure Security Center, Google Cloud Security, cloud event monitoring, threat detection, vulnerability triage, cloud-native security.

Security Tools & Analytics – Splunk, Log Analytics, security log analysis, incident dispositioning, alert tuning, false-positive reduction, threat articulation.

Cloud Platforms & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Azure, GCP, IaaS, PaaS, SaaS, cloud security principles.

Incident Response & Threat Management – incident response, vulnerability management, threat intelligence, Red/Purple team collaboration, HUNT research, AI utilization monitoring, jailbreak detection.

Enterprise Security Operations – information security operations, enterprise IT, change management, security documentation, runbook development, SLA management, production incident handling.

Programming & Scripting – Python, SQL (PostgreSQL, MySQL, Oracle), shell scripting, Linux, REST APIs.

Additional Technical Skills – Jenkins, Git, Docker, Jira, Confluence, data analysis, statistical investigation methods.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Cloud Security Event Correlation & Threat Hunting Platform (HCL Technologies)

- Architected and deployed a centralized **Splunk and Log Analytics-based** security event monitoring platform aggregating logs from **AWS Security Hub, Azure Security Center, and GCP** to correlate cloud-native threats across **200+ accounts and subscriptions**.
- Implemented automated alert tuning pipeline using **Splunk correlation rules** and **Azure Logic Apps** to reduce false positives by **60%** while maintaining **98% detection accuracy** for critical cloud misconfigurations, lateral movement, and AI jailbreak attempts.
- Developed security threat articulation dashboard and runbook library documenting **attack patterns, MITRE ATT&CK; techniques, and cloud-specific threat vectors** for AWS, Azure, and GCP, enabling incident response teams to triage **1,200+ monthly alerts** with **40% faster mean time to resolution**.
- Designed vulnerability reporting workflow integrating **AWS Security Hub findings, Azure Defender alerts, and manual security assessments** into automated case escalation, reducing critical vulnerability closure time from **14 days to 5 days** across enterprise cloud infrastructure.
- Collaborated with Red/Purple teams and threat intelligence researchers to validate cloud security controls, execute security hunts across multi-cloud environments, and recommend control enhancements, improving detection coverage by **45%** against emerging cloud-based attack techniques.

Enterprise Cloud Security Incident Response & Documentation Framework (HCL Technologies)

- Established **incident response playbooks and security documentation standards** for cloud-native incidents across AWS and Azure, covering **15+ threat scenarios** including account compromise, data exfiltration, and infrastructure tampering, deployed across **8 incident response teams**.
- Tuned **Splunk alert configurations** and **Log Analytics detection rules** to eliminate recurring false positives in cloud event streams while maintaining visibility into suspicious AI utilization and unauthorized API activity, reducing on-call alert noise by **55%**.
- Maintained real-time security documentation tracking cloud infrastructure changes, emerging threats, and control updates; automated documentation refresh workflows to reflect **100% of tooling and environment changes** within **24 hours** of implementation.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
