PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and built **core backend systems** for enterprise Java/**Spring Boot** microservices handling millions of daily requests, implementing **deterministic, cache-aware execution pipelines** with **strong performance guarantees** across **AWS** (EC2, S3, Lambda, CloudWatch) and **Docker** containerization, reducing API response latency by **40%** through optimized schema versioning and caching strategies.
- Evolved **APIs and data models** used by cross-functional teams and external customers, defining **versioning strategies with long-term stability** in mind while maintaining backward compatibility; led **4 major API migrations** impacting **15+ downstream services** with zero production incidents through comprehensive UAT coordination and change-control workflows.
- Owned complex, long-lived production systems end-to-end, implementing **observability, debugging, and operational reliability** using **Splunk, Dynatrace, and CloudWatch** for P1/P2 incident response and SLA management; reduced mean-time-to-resolution (MTTR) by **35%** through automated monitoring, alerting, and runbook automation via **Python scripting** and **Linux shell** infrastructure.
- Solved complex engineering and data-transformation problems across multiple layers and systems by designing **data transformation pipelines** and **cache-heavy architectures** using **Python, SQL** (PostgreSQL, MySQL, Oracle), and **REST APIs**; built **ETL workflows** serving **50+ stakeholders** with **99.9% uptime** and **sub-second latency** for dynamic content resolution.
- Collaborated with product managers, business stakeholders, and engineering teams across ambiguity using **Agile/Scrum** methodologies, demonstrating **product mindset with empathy for customers**; conducted requirements-gathering sessions, UAT support, and post-implementation triage for **6 major system rollouts**, translating complex technical tradeoffs into business outcomes.
- Maintained and continuously improved production-grade systems using **CI/CD pipelines** (Jenkins, Git), **code reviews**, and **infrastructure-as-code** principles; established **performance testing frameworks** to validate latency and throughput guarantees across **billions of monthly requests**, ensuring deterministic behavior under peak load via **Kubernetes** orchestration and **Terraform** infrastructure provisioning.

SKILLS

Backend & System Design – Spring Boot, Java, REST APIs, API versioning, schema design, microservices architecture, cache-aware execution pipelines, deterministic systems design, performance optimization.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, Terraform, infrastructure-as-code, multi-region deployment, containerization.

Data & Databases – PostgreSQL, MySQL, Oracle, SQL, data transformation pipelines, ETL, data modelling, schema evolution, cross-system data flows.

Observability & Operations – Splunk, Dynatrace, CloudWatch, monitoring, alerting, incident response, SLA management, production debugging, operational reliability.

DevOps & CI/CD – Jenkins pipelines, Git, code reviews, change-control management, Jira, Confluence, Agile/Scrum.

Programming Languages – Python, Java, SQL, Linux shell scripting, Bash.

Bonus Stack – TypeScript, GraphQL, serverless applications, declarative systems, AI tooling integration, data transformation frameworks.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Dynamic Content Resolution Engine with Cache-Aware Execution Pipelines (HCL Technologies)

- Architected and implemented a **core backend system** serving **2+ billion monthly requests** for personalized, multi-tenant content delivery, combining **deterministic execution pipelines** with **cache-heavy architecture** using **Spring Boot**, **PostgreSQL**, and **AWS CloudFront + Lambda** edge caching; reduced content resolution latency from **850ms to 120ms** (86% improvement) through declarative transformation logic and intelligent cache invalidation.
- Defined and evolved **GraphQL and REST API schemas** with **long-term stability** by implementing backward-compatible versioning strategies, managing **8 major API versions** across **40+ microservices** without breaking downstream integrations; documented schema governance policies that enabled **12 partner teams** to safely consume evolving content models.
- Implemented **observability, debugging, and operational reliability** using **Splunk dashboards**, **Dynatrace APM**, and custom **CloudWatch metrics**; established deterministic performance baselines and automated alerting for **P1 SLA breaches**, reducing mean-time-to-resolution by **45%** and achieving **99.98% uptime** across production environments.
- Engineered **data transformation pipelines** using **Python** and **declarative system patterns** to handle complex content modelling scenarios (personalization rules, A/B test variations, regional content routing); pipeline processed **5M+ transformation operations daily** with **deterministic, repeatable output** verified through statistical validation.
- Collaborated across product, engineering, and customer success teams to translate ambiguous requirements into sound technical tradeoffs; owned two major system redesigns involving schema migration, API contract evolution, and backward-compatibility guarantees, resulting in **30% reduction in database query complexity** and **unified content model adoption** by **95% of customers**.

SWIFT Payments Operations Dashboard & ISO 20022 Message Flow Platform (HCL Technologies)

- Built and maintained **production-grade dashboard system** providing real-time transaction-flow visibility and operational alerting for **SWIFT MT/MX messaging** and **ISO 20022 message flows** across **SEPA instant payments**, **cross-border payments**, and **PSD2 Open Banking** integrations; supported **300+ daily payment operations** with **sub-second latency** and **100% audit trail compliance** for regulatory oversight.
- Owned **system observability and operational reliability** through **Splunk dashboards** and **Dynatrace monitoring**, implementing deterministic alerting for payment message anomalies and reconciliation failures; managed **P1/P2 incidents** with **99.95% SLA achievement** and **avg. resolution time of 8 minutes** through predictive runbooks and automated diagnostic scripts.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
