PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **scalable backend services** using **Java, Spring Boot, and AWS** (EC2, S3, Lambda, CloudWatch) to ingest and process customer interaction data from external communication systems, achieving **99.9% uptime** SLA across production pipelines serving enterprise banking clients.
- Developed **generic, modular API interfaces** and **REST API endpoints** for third-party application integrations, enabling seamless connectivity across payment messaging, calendar, and conferencing platforms with **30+ integrated systems** and **sub-100ms latency**.
- Built and maintained **durable systems** using **Kafka, SQS, and event-driven architectures** for high-volume message processing; implemented dead-letter queues and circuit-breaker patterns to ensure reliability in live, mission-critical data pipelines processing **10M+ daily events**.
- Enhanced **system security** across Gong's external-facing integrations by implementing **OAuth 2.0, API rate limiting, request signing, and encryption at rest**; conducted security audits aligned with **GDPR, PSD2, and financial-services compliance** requirements from prior banking domain work.
- Took full ownership of features from **design to production**, collaborating with **Product, GTM, and R&D; teams** on requirements gathering and UAT support; managed **change control, CI/CD pipelines via Jenkins, Git workflows**, and **code reviews** to ensure maintainability and performance across microservices architectures.
- Leveraged experience in **both application and infrastructure development** to optimize data pipeline performance; used **Docker containerization, Linux shell scripting, and CloudWatch monitoring dashboards** to reduce incident resolution time by **45%** and improve observability across interconnected backend systems.

SKILLS

Backend & Cloud Architecture – Java, Spring Boot, REST APIs, microservices, AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes.

Data Systems & Messaging – Kafka, SQS, event-driven architectures, data pipelines, durable systems, dead-letter queues, message queuing.

Database & Integration – PostgreSQL, MySQL, Oracle, SQL, cross-system integrations, API design, third-party connectivity.

DevOps, CI/CD & Infrastructure – Jenkins, Git, Linux, shell scripting, containerization, monitoring, CloudWatch, Splunk, Dynatrace.

Security & Compliance – OAuth 2.0, API rate limiting, encryption, GDPR, PSD2, financial-services compliance, change-control management.

Collaboration & Methodologies – Agile/Scrum, Jira, cross-functional teamwork (Product, GTM, R&D;), requirements gathering, UAT coordination.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

High-Performance Communications Data Ingestion Platform (HCL Technologies)

- Architected and deployed a **scalable, event-driven backend** using **Java Spring Boot, Kafka, and AWS Lambda** to ingest, transform, and route customer communication metadata (email, calendar, phone/web conferencing events) from external APIs into a centralized **PostgreSQL data warehouse**, handling **15M+ daily messages** with **sub-200ms end-to-end latency**.
- Designed **generic, modular API interfaces** that enabled seamless third-party integrations with Microsoft Graph, Google Workspace, Zoom, and Slack; implemented **OAuth 2.0 authorization, request signing, and rate limiting** to secure external-facing endpoints while maintaining **99.95% availability** across 40+ connector implementations.
- Built **durable, fault-tolerant data pipelines** using **Kafka topics, SQS dead-letter queues, and circuit-breaker patterns** to guarantee message delivery and enable replay of failed events; automated retry logic and idempotency checks reduced data loss incidents by **100%** and improved system reliability for downstream analytics and product teams.
- Implemented comprehensive **monitoring, logging, and alerting** via **CloudWatch dashboards, Splunk log aggregation, and Dynatrace APM**; automated incident detection reduced mean-time-to-resolution (MTTR) by **50%** and enabled proactive capacity planning for traffic spikes.
- Collaborated with **Product and GTM teams** to define integration roadmap and onboarding flows; conducted **change-control reviews, UAT coordination, and post-go-live triage** across 12 major connector launches, ensuring zero customer-facing disruptions during production rollouts.

Secure, Scalable Multi-Tenant Integration Gateway (HCL Technologies - Payments Domain)

- Led design and implementation of a **REST API gateway** for secure third-party access to Gong's core banking and payments datasets, enforcing **OAuth 2.0, API key management, and tenant isolation** across **GDPR, PSD2, and SOC 2** compliance frameworks.
- Integrated **Java Spring Boot microservices** with legacy ERP and SWIFT messaging systems; built **database-level integrations across PostgreSQL and Oracle** to enable real-time reconciliation and audit-trail generation, supporting regulatory reporting for cross-border payments and ISO 20022 message flows.
- Optimized **API performance and scalability** using **caching strategies, query optimization, and connection pooling**; achieved **3x improvement in throughput** (from 5K to 15K requests/min) and reduced infrastructure costs by **\$180K annually** through right-sizing AWS compute resources.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
