PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and shipped end-to-end product features across **Java Spring Boot** backend services and **Flutter** mobile/web frontends, delivering **12+ customer-facing features** from concept through production deployment on **AWS** (EC2, S3, Lambda) with **99.8% uptime** in banking payments environments.
- Built and maintained **clean, maintainable Java services and REST APIs** running in cloud-native AWS environments, implementing **distributed backend concerns** including idempotency, retry logic, partial failure handling, and latency optimization across **PostgreSQL** and **Oracle** data models, supporting **10K+ daily transactions**.
- Developed high-quality **Flutter applications for mobile (iOS & Android) and web** using established **design systems and reusable component libraries**, managing application state across platform boundaries and accounting for **mobile release cycles, performance constraints, and offline-first resilience**.
- Integrated **platform services and AI capabilities** into user-facing workflows, designing and consuming APIs that operated reliably within established **compliance constraints** (GDPR, data protection, regulatory audit trails) and building features with a **security-first mindset** across interconnected fintech systems.
- Owned features through their full lifecycle—from product conception through production hardening and iteration—using **AI-assisted development tools** to accelerate coding, testing, and refactoring while maintaining **high bars for correctness, performance, and clarity** in a **startup / 0→1 environment**.
- Collaborated closely with product, design, AI engineering, and specialist teams, contributing to **CI/CD pipelines across backend and mobile/web deployment**, debugging production incidents with **Splunk / CloudWatch / Dynatrace**, and balancing rapid shipping velocity against over-engineering through clear communication of trade-offs and constraints.

SKILLS

Backend & Full-Stack – Java, Spring Boot, REST APIs, distributed systems, idempotency, retry logic, failure handling, AWS (EC2, S3, Lambda, CloudWatch).

Mobile & Frontend – Flutter, iOS, Android, web applications, design systems, component libraries, application state management, mobile release cycles.

Data & Integration – PostgreSQL, Oracle, MySQL, SQL, data modelling, API design, system integrations, cloud-native architectures.

DevOps & Infrastructure – AWS, Docker, CI/CD pipelines (Jenkins), Git, Linux, deployment automation, mobile and backend release management.

Fintech Domain – Payments processing, financial-services compliance, GDPR, data protection, security-first development, audit trails, regulatory constraints.

Development Practices – AI-assisted coding tools, clean code, testing, debugging, production monitoring, end-to-end feature ownership, startup velocity, Agile/Scrum.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Mobile-First B2B Credit & Payments Platform (HCL Technologies)

- Architected and shipped a **Flutter-based mobile and web application** for business credit assessment and payment workflows, integrating **Java Spring Boot microservices** running on **AWS** with distributed **idempotent transaction processing**, achieving **sub-200ms API latency** and supporting **50K+ concurrent mobile users**.
- Designed **RESTful APIs and PostgreSQL data models** to power risk-scoring and payment-flow features, implementing **security-first access controls**, **compliance audit logging**, and **GDPR-aligned data retention policies** across interconnected backend services, reducing data breach surface by **85%**.
- Built **reusable Flutter component libraries and design system integrations** for credit decisioning and payment UX, managing offline-first state and mobile release cycles across iOS and Android, enabling **5-day product iteration cycles** with **zero production regressions**.
- Integrated **AI-assisted development tools** into feature development pipeline, automating test generation and refactoring workflows to accelerate shipping by **35%** while maintaining code quality standards and enabling **ship-first mindset** over ceremony.
- Owned end-to-end feature delivery from product conception through production hardening, collaborating with founders, designers, and AI engineering teams in a startup environment; debugged production incidents using **CloudWatch** and **Dynatrace**, reducing MTTR to **15 minutes**.

Real-Time Payments Operations Dashboard & SWIFT Integration (HCL Technologies)

- Built and shipped a **production-grade SWIFT messaging and payments-operations dashboard** processing **500K+ daily payment messages** (MT/MX formats), providing **real-time transaction-flow visibility** and **operational alerting** with **99.95% uptime SLA** across distributed backend services.
- Designed **ISO 20022 message parsing and routing APIs** in **Java Spring Boot**, implementing **idempotent payment processing**, **retry logic with exponential backoff**, and **cross-border payment orchestration** (SEPA, instant payments) compliant with **PSD2 and GDPR audit trail requirements**.
- Collaborated with banking-domain business analysts and operations teams to gather requirements, deliver UAT support, and triage post-go-live issues, translating **regulatory compliance** and **financial-services SLA constraints** into engineering trade-offs and architectural decisions.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
