PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and deployed **microservices architecture** using **Java 11 Spring Boot** and **REST APIs** across distributed AWS environments (**EC2, S3, Lambda**), reducing application latency by **35%** and improving system resiliency for enterprise banking clients; implemented **CI/CD pipelines** via **Jenkins** with automated testing and code reviews to enforce production code quality and **application stability**.
- Executed system design and application development for **event-driven microservices** integrating **Kafka messaging systems** and **Java Messaging Service (JMS)** to process **2.5M daily transaction messages** with **99.95% uptime**; led technical troubleshooting and incident response for P1/P2 production incidents using **Splunk, CloudWatch, and Dynatrace** monitoring to maintain SLA compliance.
- Architected and optimized **relational database schemas** across **Oracle, PostgreSQL, and MySQL** for high-volume payments processing; conducted performance tuning of large-scale applications handling **50K+ concurrent transactions**, reducing query execution time by **42%** through indexing strategies and query optimization; developed **data validation and reconciliation automation** in **Python**.
- Led **cloud-native application migration** to **AWS ecosystem** (EC2, Lambda, RDS) from on-premise systems, enabling **hybrid cloud** flexibility and **containerization** via **Docker** for **12 enterprise applications**; managed change-control protocols, UAT coordination, and post-implementation support across interconnected business systems with zero downtime.
- Applied **in-depth financial services industry knowledge** including **ISO 20022 message flows, SEPA payments, SWIFT MT/MX formats, PSD2 compliance, and cross-border payment processing** to design trade processing platform enhancements; collaborated with banking domain business analysts and regulatory teams to ensure **audit trails, data protection, and GDPR compliance** standards across payment-operations dashboards.
- Developed data visualization and reporting dashboards using **Power BI** and **Tableau** to synthesize large, diverse datasets; created **DAX measures and Power Query ETL pipelines** that surfaced hidden patterns and anomalies in system performance, driving automated remediation of **18 recurring operational issues** and reducing incident resolution time by **38%**.

SKILLS

Languages & Backend Development – Java 11, Spring Boot, Python, SQL, REST APIs, Flask, FastAPI.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch, RDS), Docker, containerization, hybrid cloud solutions, AWS ecosystem migrations.

Event-Driven & Messaging Systems – Kafka, Java Messaging Service (JMS), event-driven development, asynchronous system design.

Databases & Data Engineering – Oracle, PostgreSQL, MySQL, MongoDB, relational database optimization, data warehousing, ETL pipelines, schema design, performance tuning.

Microservices & System Design – microservices architecture, distributed systems, system design, application design artifacts, design constraints, CI/CD pipelines, Jenkins, Git.

Monitoring, Observability & DevOps – Splunk, Dynatrace, CloudWatch, application resiliency, incident management, production support, DevOps practices, Linux, shell scripting.

Data Analytics, BI & Financial Services – Power BI, Tableau, DAX, Power Query, data modelling, ISO 20022, SEPA, SWIFT MT/MX, PSD2, cross-border payments, GDPR compliance, audit trails, regulatory requirements, financial services systems, Jira, Agile methodologies.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Trade Processing Platform Modernization – Event-Driven Microservices Migration (HCL Technologies)

- Led design and delivery of **event-driven microservices architecture** using **Java 11 Spring Boot** replacing monolithic trade processing system; integrated **Kafka messaging** and **JMS** to decouple payment initiation, settlement, and reconciliation workflows, enabling real-time asynchronous transaction processing for **3M+ daily trade messages** with **99.97% reliability**.
- Executed **cloud-native migration to AWS** utilizing **EC2 auto-scaling groups**, **Lambda for event handlers**, and **RDS for Oracle/PostgreSQL**; implemented **Docker containerization** across **8 microservices** with **CI/CD pipelines** in **Jenkins** for zero-downtime deployments, reducing time-to-production by **60%**.
- Designed relational database architecture across **Oracle and PostgreSQL** for payment settlement and trade reconciliation, optimizing query performance by **45%** through advanced indexing and execution-plan tuning for **50K concurrent transactions**; implemented **data validation and ISO 20022 compliance** checks at the application layer.
- Developed comprehensive **Splunk and CloudWatch monitoring dashboards** with alerting rules for production incident detection; reduced mean-time-to-resolution (MTTR) by **48%** through automated anomaly detection and integrated **Power BI reporting** for C-level trade volume and settlement metrics.
- Embedded **ISO 20022, SEPA, and SWIFT MT/MX compliance validation** into platform with cross-system integrations via **REST APIs**; collaborated with regulatory and business teams to document audit trails and enforce **GDPR data protection standards**, supporting regulatory sign-off for Go-Live.

SWIFT Payments Operations Dashboard & Real-Time Transaction Monitoring (HCL Technologies)

- Architected and deployed **real-time transaction-flow visibility dashboard** for banking payments-operations center using **REST APIs, PostgreSQL, and AWS CloudWatch**; monitored **SWIFT MT/MX message formats** and **cross-border payment processing** workflows, enabling operations teams to detect settlement anomalies within **2 minutes** vs. **4 hours** previously.
- Implemented **production support and SLA management** protocols for **P1/P2 incident response** with **Dynatrace APM** and **Splunk log aggregation**, achieving **99.95% uptime** across payment-operations infrastructure; conducted root-cause analysis and automated remediation for **15 recurring issues** in message routing and settlement reconciliation.
- Developed **Python automation scripts** for data validation and reconciliation workflows across SEPA instant payments and ISO 20022 transaction flows; reduced manual reconciliation time by **70%** and identified **\$2.3M in discrepancies** through **SQL-driven data quality checks** on settlement records.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)

- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
