PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and deployed **LLM-based production systems** using **Claude API** and **Anthropic SDK**, orchestrating end-to-end AI workflows from prompt engineering through inference, achieving **40% faster** resume generation at scale with structured JSON constraint guardrails and multi-stage evaluation pipelines.
- Built and productionised **AI-powered automation platforms** leveraging **function calling**, **prompt engineering**, and **agentic workflows**, integrating **Claude Haiku** for cost-optimised inference while maintaining **99.2% accuracy** on structured output tasks.
- Architected **infrastructure-as-code deployment pipelines** using **GitHub Actions** and **cloud-native tooling**, automating end-to-end provisioning across compute, storage, and serverless services; deployed **Vercel** integrations for continuous AI application delivery with **zero-downtime** updates.
- Implemented **retrieval-augmented generation (RAG)** and **memory systems** for enterprise AI use cases, integrating document processing, vector embeddings, and context-aware prompt construction to reduce hallucination rate by **35%** across financial and operational domains.
- Engineered **production observability and instrumentation** for AI systems using **CloudWatch**, **Splunk**, and **Dynatrace**, implementing custom logging for token usage, latency profiling, and inference cost tracking across multiple LLM providers; reduced operational blind spots by **60%**.
- Evaluated and recommended **emerging AI technologies** including **Model Context Protocol (MCP)** tooling, **agentic deployment frameworks**, and **guardrails systems** against real-world use cases; produced clear technical guidance and runbooks enabling peer teams to adopt capabilities with **confidence and standardisation**.

SKILLS

AI Engineering & LLMs – Claude API, Anthropic SDK, prompt engineering, function calling, retrieval-augmented generation (RAG), agentic frameworks, memory systems, guardrails, Model Context Protocol (MCP), LLM evaluation metrics, inference optimisation.

Programming Languages – Python, TypeScript, Java, SQL, R, shell scripting.

Cloud & Infrastructure-as-Code – AWS (EC2, S3, Lambda, CloudWatch), Azure, GCP, GitHub Actions, Vercel, Crossplane, Terraform, CI/CD pipelines, containerisation (Docker).

Data Engineering & Analytics – ETL pipelines, data warehousing, pandas, NumPy, scikit-learn, Power BI, Tableau, DAX, Power Query, statistical analysis, machine learning (supervised/unsupervised), A/B testing.

Software Engineering & Architecture – REST API development, microservices, Spring Boot, FastAPI, Flask, system integration, change-control management, Kubernetes concepts, infrastructure reliability.

Operations & Observability – Production monitoring, SLA management, incident response, application instrumentation, logging, cost tracking, operational dashboards, CloudWatch, Splunk, Dynatrace.

Domain Expertise – SWIFT messaging (MT/MX), ISO 20022, payments processing, SEPA, open banking, PSD2, financial services compliance, GDPR, ERP systems, cross-system integrations.

EDUCATION AND TRAINING

PROJECTS

Ireland Jobs Tracker – AI-Powered Resume Generation Platform (Personal Project)

- Architected and deployed a full-stack **AI engineering application** integrating **Claude Haiku** via **Anthropic SDK** with production infrastructure, combining web scraping, LLM inference, and document generation into a single automated workflow.
- Implemented **advanced prompt engineering** with structured JSON output, constraint guardrails, and multi-turn reasoning to generate job-description-tailored resumes at scale; engineered evaluation logic to validate output quality with **98.5% structural correctness**.
- Orchestrated **end-to-end AI workflow automation** using **Apify scrapers** → job description ingestion → **Claude API** processing → **reportlab PDF generation** → **GitHub Actions CI/CD** → **Vercel cloud deployment**, reducing manual resume-writing time by **90%**.
- Deployed infrastructure automation via **GitHub Actions** workflows with containerised API services, implemented cost optimisation strategies using model selection (Haiku vs. Opus), and achieved **99.7% uptime** across production endpoints.

Enterprise Payments Operations Dashboard & AI-Assisted Incident Response (HCL Technologies)

- Led development and **productionisation of a SWIFT messaging dashboard** supporting real-time transaction-flow visibility for a banking client; implemented **production monitoring** with **Splunk** and **Dynatrace** to track SLA compliance, achieving **99.5% availability** across payment operations.
- Built **AI-assisted incident triage and response workflows** using **Python automation** and **function-calling LLM integrations** to correlate alerts, suggest remediation steps, and accelerate P1/P2 incident resolution; reduced mean-time-to-resolution (MTTR) by **45%**.
- Engineered **real-time operational dashboards** with **CloudWatch** and custom ETL pipelines to surface **ISO 20022 message flows**, SEPA payment status, and cross-border reconciliation metrics; enabled 24/7 operations teams to detect payment anomalies **15 minutes earlier** than baseline.
- Implemented **regulatory compliance instrumentation** capturing audit trails, GDPR data flows, and PSD2 mandate requirements; collaborated cross-functionally with compliance and operations teams to ensure production configuration aligned with financial services standards.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
