PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and deployed **identity and access management** microservices using **Java Spring Boot** and **REST APIs**, reducing authentication latency by **35%** and improving system reliability to **99.95% uptime** across production environments serving millions of financial-services transactions.
- Built end-to-end **full-stack** features spanning **backend (Java/Spring Boot)**, **frontend (React/Angular)**, and **cloud infrastructure (AWS EC2, Lambda, CloudWatch)**, managing the complete development lifecycle from design through deployment and post-go-live support.
- Implemented **identity verification workflows** and **OAuth 2.0 / OIDC authentication flows** integrated with enterprise directories and third-party identity providers, ensuring compliance with **GDPR, data protection regulations**, and financial-services audit requirements across interconnected systems.
- Automated identity provisioning and role-based access control (RBAC) pipelines using **Python** and **SQL** against **PostgreSQL, MySQL, Oracle** databases, processing **50,000+ identity records daily** with **99.8% accuracy** and reducing manual provisioning overhead by **60%**.
- Established **CI/CD pipelines** using **Jenkins, Git, GitHub Actions** for continuous identity service deployment, integrated **Docker containerization** for identity microservices, and applied **Infrastructure as Code** practices to standardize identity platform deployments across **AWS environments**.
- Collaborated across engineering, security, and compliance teams to translate identity and access management requirements into scalable technical solutions, producing **architectural documentation, API specifications**, and **runbooks** for identity service operations and incident response.

SKILLS

Languages & Frameworks – Java, Spring Boot, Python, SQL, REST APIs, React, Angular.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions), Git.

Databases & Data Engineering – PostgreSQL, MySQL, Oracle, data modelling, ETL pipelines, Python (pandas, NumPy).

Identity & Security – OAuth 2.0, OIDC, SAML, role-based access control (RBAC), identity provisioning, directory services, GDPR compliance, audit trails.

Monitoring & Observability – Splunk, Dynatrace, CloudWatch, application performance monitoring, incident response, SLA management.

Data & Analytics – Power BI, Tableau, DAX, Power Query, data warehousing, statistical analysis, machine learning (scikit-learn).

Tools & Methodologies – Jira, Confluence, Agile/Scrum, change management, cross-functional collaboration, API integration.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Identity & Access Management Platform (HCL Technologies)

- Architected and developed a **full-stack identity service** supporting **OAuth 2.0, OIDC, and SAML** authentication flows for enterprise banking customers, enabling secure single sign-on (SSO) and federated identity management across **Java Spring Boot microservices** and **React frontends**.
- Engineered **identity provisioning automation** using **Python ETL pipelines** and **SQL** to synchronize user identities and role-based access control (RBAC) policies from **PostgreSQL** and **Oracle** directories to downstream systems, achieving **99.8% provisioning accuracy** and eliminating **40+ hours/month** of manual identity management.
- Deployed identity microservices using **Docker containers** on **AWS (EC2, Lambda)** with **Jenkins/GitHub Actions CI/CD pipelines**, established **CloudWatch monitoring and alerting** for identity service health, and authored runbooks for incident response, maintaining **99.95% availability SLA**.
- Ensured **GDPR compliance and audit trail logging** throughout identity lifecycle (creation, modification, deletion), implemented encryption and secure credential storage, and collaborated with security and compliance teams to meet financial-services regulatory standards for identity governance.

AI-Powered Resume Automation Engine – Ireland Jobs Tracker (Personal Project)

- Built an end-to-end **AI-powered SaaS automation platform** leveraging **Claude API (Anthropic)**, **prompt engineering**, and **structured JSON** to dynamically generate tailored resumes at scale, processing **200+ job descriptions monthly** with **98% content relevance accuracy**.
- Orchestrated a full **full-stack architecture** combining **Apify web scrapers** → **Python backend (FastAPI)** → **Claude LLM integration** → **reportlab PDF generation** → **GitHub Actions CI/CD** → **Vercel cloud deployment**, reducing resume creation time from **45 minutes to 2 minutes per job**.
- Implemented **prompt engineering best practices** with guardrails, constraint validation, and output structuring to ensure high-fidelity, contextually tailored resume content; integrated **error handling and retry logic** to achieve **99.7% end-to-end pipeline reliability**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
