PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Diagnosed and resolved critical production incidents across **mission-critical database-backed enterprise applications** using **Linux systems administration, performance profiling** (Splunk, Dynatrace), and **holistic analysis from application tier through database to storage and infrastructure**; achieved **99.5% SLA compliance** for banking payments operations dashboard supporting **SWIFT MT/MX messaging** and ISO 20022 transaction flows.
- Troubleshoot complex **cloud infrastructure environments** on AWS (EC2, S3, Lambda, CloudWatch) across production systems; analyzed **networking concepts including DNS, TCP/IP, and SSL/TLS** configurations; managed **disaster recovery and operational workflows** for payment processing systems handling **cross-border payments, SEPA, and instant payments** at scale.
- Executed **change-control management** and **infrastructure configuration updates** across interconnected **enterprise business systems** and ERP platforms; coordinated **UAT and post-go-live support** with business stakeholders; validated system **performance, availability, and scalability** requirements across mission-critical financial services workloads.
- Developed **Python automation scripts and diagnostic tooling** for production support, including **performance benchmarking, log analysis, and system troubleshooting**; built **backup and restore automation workflows** using **Linux shell scripting, cron jobs, and CI/CD Jenkins pipelines** to reduce incident response time by **40%**.
- Operated and supported **containerized applications using Docker** in **cloud production environments**; implemented **monitoring and alerting strategies** across database and infrastructure layers to ensure **broad awareness of workload patterns and customer requirements** for performance and reliability; collaborated cross-functionally with operations and development teams on system architecture.
- Mentored junior engineers on **production system troubleshooting methodologies, regulatory compliance (GDPR, Data Protection)**, and best practices for **operating mission-critical systems**; contributed to internal knowledge documentation and training materials; demonstrated **patience, empathy, and customer-focused problem-solving** across complex financial services technical escalations.

SKILLS

Linux & Systems Administration – Linux performance tuning, memory and I/O management, configuration, security, networking, clustering, storage management, log analysis, shell scripting, cron jobs, system troubleshooting.

Database & Infrastructure – PostgreSQL, MySQL, Oracle, production database support, disaster recovery, backup and restore workflows, schema management, data validation, database administration across RDBMS systems.

Cloud & Orchestration – AWS (EC2, S3, Lambda, CloudWatch), cloud infrastructure platforms, Docker containerization, production cloud environments, infrastructure configuration management.

Networking & Security – DNS, TCP/IP, SSL/TLS, networking concepts and protocols, security configurations, regulatory compliance (GDPR, Data Protection), audit trails.

Monitoring & Diagnostics – Splunk, Dynatrace, CloudWatch, performance profiling, benchmark analysis, incident response, SLA management, P1/P2 production support, holistic system diagnostics.

Development & Automation – Python scripting, Java Spring Boot, REST APIs, Jenkins CI/CD pipelines, Git version control, code review, basic coding and automation in production systems.

Enterprise & Payments Domain – Mission-critical enterprise applications, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA payments, cross-border payments, PSD2, change-control management, ERP systems, Jira, Confluence.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India

01/2021

PROJECTS

MongoDB Atlas Production Support & Diagnostic Tooling Platform (HCL Technologies)

- Architected and deployed a **comprehensive diagnostic and performance benchmarking toolkit** for troubleshooting **MongoDB clusters across AWS, Azure, and GCP production environments**; integrated **Linux systems analysis, networking protocol inspection (DNS, TCP/IP, SSL/TLS), and storage I/O profiling** into unified dashboard reducing mean time to resolution (MTTR) by **55%**.
- Built **automated backup, restore, and disaster recovery workflows** using **Python scripting, shell automation, and Jenkins CI/CD pipelines**; enabled customers to validate **recovery point objective (RPO) and recovery time objective (RTO)** across mission-critical MongoDB deployments supporting **petabyte-scale data workloads**.
- Developed **production monitoring and alerting automation** leveraging **CloudWatch, Splunk integration, and custom Python diagnostic agents** to analyze MongoDB performance across application tier through database to storage layer; tracked **workload patterns, resource utilization, and scalability metrics** across **100+ customer environments** globally.
- Established **change-control and configuration management best practices documentation** for MongoDB operations; mentored customer technical teams on **Kubernetes orchestration, clustering configurations, and high-availability architectures**; reduced configuration-related incidents by **38%** through proactive knowledge transfer.

Enterprise SWIFT Payments Operations & Regulatory Compliance Monitoring (HCL Technologies)

- Engineered **production monitoring and alerting system** for **SWIFT MT/MX messaging dashboard** supporting mission-critical payments operations; implemented **holistic diagnostics spanning application performance, database transaction processing, and infrastructure health** across **ISO 20022 message flows** with **99.8% availability SLA**.
- Coordinated **disaster recovery testing and backup validation workflows** for financial services systems handling **SEPA instant payments and cross-border payment clearing**; ensured **regulatory compliance (GDPR, audit trails, data protection)** across **10+ interconnected ERP and business system integrations**.
- Developed **Python-based transaction reconciliation and anomaly detection scripts** for payments operations; reduced incident investigation time by **45%** through automated **log analysis and pattern matching** across production infrastructure; documented **change-control procedures** for post-go-live support and UAT coordination.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023

- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
