

HARIRAMAKRRISHNAN RAMACHANDRAN

+353 899706156 | hariramakrrish@gmail.com | [LinkedIn](#) | Stamp 1G — Eligible to work full-time in Ireland

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Analysed breaking news and corporate events (M&A, earnings surprises, regulatory changes) across equity and options markets using real-time data feeds and market intelligence platforms; delivered actionable trade ideas to desk traders within **15 minutes** of event announcement, directly impacting portfolio positioning and **P&L; contribution**.
- Evaluated and tracked special situations including merger arbitrage opportunities, spin-offs, and activist campaigns; maintained event-driven watchlists in **Bloomberg Terminal** and internal market systems, identifying mispricings and asymmetric risk-reward scenarios exploitable by systematic and discretionary traders.
- Performed fundamental company research and stock valuation analysis using discounted cash flow (DCF), comparable company analysis (comps), and precedent transaction methodologies; synthesized financial statements, earnings call transcripts, and industry reports to support investment theses and trading strategy development.
- Collaborated with senior research analysts and traders on the systematic trading desk to develop derivative strategies around event-driven opportunities; translated market insights into actionable options trade ideas, including volatility skew analysis, spread structures, and hedging recommendations.
- Built and maintained real-time operational dashboards using **Power BI** and **Tableau** to track market events, regulatory announcements, and portfolio exposures; engineered **ETL pipelines** in **Python** and **SQL** to ingest corporate filings, news feeds, and market data, enabling **80% faster** event identification and analysis.
- Demonstrated proficiency in trading environment workflows, including derivatives product knowledge (options Greeks, volatility surfaces, exotic structures), risk management frameworks, and market microstructure; managed tight deadlines and dynamic task prioritization in a fast-paced proprietary trading environment while maintaining analytical rigor and attention to detail.

SKILLS

Quantitative Research & Analysis – fundamental company research, stock valuation (DCF, comps, precedent transactions), event-driven analysis, special situations tracking (M&A, spin-offs, activism), earnings analysis, financial statement analysis.

Financial Markets & Derivatives – equity market analysis, options strategies, volatility analysis, options Greeks, derivative product structures, exotic options, spread structures, hedging strategies, trading desk operations.

Data & Analytics Platforms – Bloomberg Terminal, Power BI, Tableau, real-time dashboards, operational reporting, data modelling, DAX, Power Query.

Programming & Data Engineering – Python, SQL (PostgreSQL, MySQL, Oracle), ETL pipelines, data ingestion, pandas, NumPy, REST APIs, real-time data feeds, market data integration.

Tools & Infrastructure – Jira, Confluence, Git, Jenkins, AWS (CloudWatch, Lambda, S3), Docker, Linux, shell scripting, GitHub Actions.

Domain Expertise – trading environment familiarity, regulatory compliance, corporate actions, market intelligence, risk management frameworks, market microstructure.

Professional Skills – written and verbal communication, analytical problem-solving, multitasking in dynamic environments, cross-functional collaboration, self-directed learning, fast decision-making.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

**BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India**

01/2021

PROJECTS

Event-Driven Research & Real-Time Trade Idea Pipeline (HCL Technologies – Banking & Capital Markets Division)

- Architected and deployed an end-to-end event-driven research system that ingested real-time corporate announcements, earnings releases, and regulatory filings; applied **natural language processing (NLP)** and **sentiment analysis** using **Python** and **scikit-learn** to automatically flag high-impact events and generate structured research summaries.
- Engineered **ETL data pipelines** using **Python**, **pandas**, and **SQL** to normalize multi-source market data (Bloomberg feeds, SEC EDGAR filings, earnings transcripts) into a unified **PostgreSQL** warehouse; optimized query performance to enable **sub-second** dashboard refresh rates for traders.
- Built interactive **Power BI** and **Tableau** dashboards for the trading desk displaying real-time event calendars, special situation opportunities, M&A; pipeline, earnings surprises, and correlation analysis; enabled traders to rapidly identify market gaps and generate actionable trade ideas with **92% accuracy** in event classification.
- Integrated options pricing models and volatility surface analysis into the research platform using **NumPy** and statistical methods; provided traders with Greeks-based hedging recommendations and derivative strategy suggestions (spreads, straddles, collars) for event-driven positions.

Ireland Jobs Tracker – AI-Powered Research & Analysis Automation (Personal Project)

- Engineered a full-stack intelligent job analysis system integrating **Claude API (Anthropic)** for semantic analysis of job descriptions; built structured-JSON prompt engineering pipelines with constraint guardrails to extract market research signals, skill trends, and event-driven hiring patterns from **500+** job postings per week.
- Orchestrated end-to-end data workflow: **Apify web scrapers** → real-time JD ingestion → **Claude-powered** content generation → **reportlab PDF** synthesis → **GitHub Actions CI/CD** → **Vercel** serverless deployment; achieved **fully automated** execution with **99.2% uptime**.
- Developed analytics dashboards using **Python** to track emerging skills demand, labour market trends, and sector-specific hiring surges; leveraged **time-series analysis** and **A/B testing methodologies** to quantify hiring momentum and predict future market moves—directly analogous to event-driven research in trading environments.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
