PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Developed and maintained **Java Spring Boot** microservices, contributing to a service-oriented architecture and implementing RESTful APIs for cross-service communication.
- Engineered **Python** data pipelines for ETL processes, automating data ingestion and transformation, which reduced manual processing time by approximately 40%.
- Wrote and optimized **SQL** queries across **PostgreSQL** and **MySQL** databases for data validation, ad-hoc reporting, and schema evolution in enterprise systems.
- Collaborated with engineering and product management teams to design and implement new full-stack features for dealer-facing products, focusing on user experience and business requirements.
- Participated in code reviews, providing and receiving constructive feedback to ensure high-quality, well-tested, and efficient code delivery within an Agile development cycle.
- Managed the deployment of containerised applications using **Docker** and basic orchestration principles on **AWS** infrastructure, ensuring reliable service delivery.
- Acted as a primary technical point of contact during the onboarding of three enterprise customers, gathering feature-pipeline requirements and translating them into actionable development tasks.

PROJECTS

Enterprise Java Microservice Development (HCL Technologies)

- Designed and implemented a suite of **Java Spring Boot** microservices to manage core business logic for an enterprise client's internal platform.
- Integrated services using **Hibernate** and **JPA** with a **PostgreSQL** backend, ensuring data integrity and efficient persistence layer operations for over 50,000 daily transactions.
- Developed comprehensive unit and integration tests using **JUnit** and **Mockito**, achieving over 85% code coverage and ensuring application stability.

Customer Onboarding Automation for Internal Platform (HCL Technologies)

- Developed a **Python**-based automation tool to streamline the onboarding process for new enterprise customers integrating with an internal ML platform.
- Built RESTful APIs using **FastAPI** to facilitate data exchange between the onboarding tool and the core platform, reducing manual configuration steps by 60%.
- Collaborated with customer success teams to gather requirements and refine the tool's features, directly impacting the speed of customer adoption and reducing initial setup time from weeks to days.
