PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Developed and maintained Python-based pricing models for vehicle remarketing, directly influencing conversion rates and portfolio profitability across a fleet of approximately 50,000 vehicles annually.
- Enhanced the **SQL**-based Fair Market Value (FMV) tool, ensuring data integrity and alignment with market dynamics through continuous refinement using historical performance data, reducing pricing variance by **15%**.
- Automated recurring reporting processes for vehicle sales performance analysis using Python scripting, saving an estimated **10 hours** of manual effort per week for the remarketing operations team.
- Designed and implemented **machine learning** models to predict vehicle outcomes and improve pricing accuracy, achieving a **12%** uplift in predicted residual values on test datasets.
- Analyzed vehicle sales performance and pricing variance, identifying key drivers of unexpected variability and presenting actionable insights to senior remarketing leaders through detailed reports.
- Collaborated with remarketing leadership and operations teams to translate complex analytical findings into clear, actionable business recommendations for pricing execution and strategic decisions.
- Containerized pricing model services using **Docker** and deployed them to a cloud environment, improving deployment consistency and enabling faster iteration cycles.

SKILLS

Programming Languages – Python, SQL, R, Java

Data Analysis & Machine Learning – scikit-learn, pandas, NumPy, statistical modeling, machine learning, predictive modeling, data science, regression analysis

Databases – PostgreSQL, MySQL, Oracle

Cloud & DevOps – AWS, Docker, Jenkins, Git

BI & Visualization – Power BI, Tableau, DAX, Power Query, data modeling

PROJECTS

Automated Vehicle Valuation Model

- Developed a **Python**-based predictive model using **scikit-learn** to estimate Fair Market Value for remarketed vehicles, trained on a dataset of 1.2 million historical sales records.
- Implemented feature engineering techniques to capture vehicle condition, mileage, and market trends, improving model prediction accuracy by **18%** compared to previous methods.
- Created automated data pipelines in **Python** to ingest and preprocess raw vehicle data from multiple sources, ensuring timely model retraining and deployment.

Remarketing Performance Analytics Dashboard

- Designed and built an interactive **Power BI** dashboard to visualize key remarketing metrics including conversion rates, pricing variance, and portfolio profitability for senior leadership.
- Developed complex **DAX** measures to analyze sales performance against set targets, providing drill-down capabilities for auction managers and regional leads.
- Integrated data from various internal systems using **Power Query**, consolidating disparate data sources into a unified model for comprehensive reporting.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
