PROFESSIONAL EXPERIENCE — 3.5 YEARS

Software Engineer — HCL Technologies, Chennai, India Sep 2021 – Jan 2025

- Developed and deployed a Python-based ETL pipeline to ingest and transform environmental sensor data from multiple sources into a centralized data lake, reducing manual data processing time by **40%**.
- Designed and implemented RESTful APIs using **Java Spring Boot** for seamless integration between legacy systems and new sustainability tracking modules, facilitating data exchange for over **15** different enterprise applications.
- Managed incident response and production support for critical enterprise applications on **AWS**, resolving P1/P2 incidents and ensuring adherence to strict Service Level Agreements (SLAs).
- Collaborated with environmental consultants and business analysts to gather and document requirements for a new sustainability reporting platform, translating complex needs into actionable technical specifications.
- Contributed to the design and implementation of a data quality framework for incoming environmental data streams, improving data accuracy by an estimated **18%**.
- Containerized microservices using **Docker** and deployed them to an **AWS EKS** cluster, improving deployment consistency and enabling automated scaling for fluctuating data ingestion loads.
- Authored detailed technical documentation and knowledge base articles for a new environmental data processing service, enabling faster onboarding for new team members and reducing support escalations by **30%**.

SKILLS

Programming Languages – Python, Java, SQL, R

Frameworks & Libraries – Spring Boot, pandas, NumPy, scikit-learn, Flask, FastAPI

Cloud Platforms – AWS (EC2, S3, Lambda, CloudWatch, EKS)

Databases – PostgreSQL, MySQL, Oracle

Tools & Technologies – Docker, Kubernetes, Jenkins, Git, Jira, Confluence, Splunk, Dynatrace, Power BI, Tableau, Linux

Concepts – ETL, Data Pipelines, REST APIs, CI/CD, Agile, Scrum, Data Analysis, Machine Learning Fundamentals, Business Intelligence, Sustainability Reporting

PROJECTS

Environmental Data Ingestion and Analysis Platform

- Developed a Python-based application to ingest real-time environmental sensor data from various IoT devices, processing over **5,000 data points per hour**.
- Engineered data transformation scripts using **pandas** and SQL to clean, validate, and structure raw sensor readings for downstream analysis and reporting.
- Built interactive **Power BI** dashboards to visualize key environmental metrics, enabling stakeholders to monitor air quality trends and identify areas for improvement.

Sustainability Metrics Tracking Service

- Designed and implemented a **Java Spring Boot** microservice to track and report on key sustainability indicators for enterprise clients.
- Integrated the service with existing client ERP systems via REST APIs to automatically pull relevant operational data, reducing manual data entry by an estimated **35%**.
- Developed a user-friendly interface for clients to input and review their sustainability performance data, facilitating compliance and strategic planning.

EDUCATION

M.Sc. Data Analytics — National College of Ireland, Dublin Feb 2026

B.E. Computer Science — SNS College of Technology, Coimbatore, India 2021

CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
