PROJECTS

Real-Time Satellite Communications KPI Dashboard (MSc Data Analytics Project)

- Developed a comprehensive **Power BI dashboard** to visualize key performance indicators (KPIs) for satellite communication systems, integrating data from simulated network traffic, financial projections, and operational status.
- Engineered data pipelines using **Python and Power Query** to extract, transform, and load data from disparate sources, ensuring data integrity and enabling real-time reporting for strategic decision-making.

- Implemented complex **DAX measures** to calculate critical metrics such as latency, throughput, system uptime, and cost-per-gigabyte, providing actionable insights to R&D; and Operations teams.

Automated Financial Transaction Monitoring System (HCL Technologies)

- Built automated data validation checks and **transaction monitoring** workflows using **Python**, reducing manual reconciliation errors by **15%** for a financial-services client's payments operations dashboard.
- Developed and maintained **SQL queries** against PostgreSQL and Oracle databases to extract and analyze transaction data, supporting operational alerting for failed or stalled payment messages.
- Integrated monitoring alerts into a centralized dashboard using **Splunk**, enhancing incident response times for P1/P2 incidents related to payment message processing by **20%**.
