## PROFESSIONAL EXPERIENCE

**SOFTWARE ENGINEER – HCL Technologies | Chennai, India**

**09/2021 – 01/2025 (3.5 Years)**

- Designed and implemented **large-scale, real-time software systems** for production enterprise applications; architected **distributed monitoring and alerting infrastructure** using **Splunk, CloudWatch, and Dynatrace** to track network traffic flows, transaction routing, and service health across **global payment systems**, achieving **99.95% uptime SLA compliance**.
- Developed **performance-optimized code** in **Java Spring Boot** and **Python** for mission-critical payment-operations and traffic-routing services; implemented **data structures and algorithms** for efficient message queuing, payload transformation, and flow prioritization, reducing end-to-end latency by **32%** in high-throughput systems.
- Led **design reviews and architecture decisions** across **network infrastructure, system reliability, and API design**; collaborated with cross-functional stakeholders (infrastructure engineers, security, product) to evaluate technologies for large-scale distributed systems; provided **code review feedback** to ensure adherence to best practices, performance standards, and reliability patterns.
- Debugged and resolved critical production issues in **real-time systems** by analyzing network logs, service metrics, and distributed traces; triaged **hardware, network, and service operation** faults; tracked impact on global traffic load balancing and implemented root-cause fixes that restored **multi-gigabit traffic flows** and prevented **cascading service failures**.
- Engineered **CI/CD pipelines** and **infrastructure automation** using **Jenkins, Docker, AWS (EC2, S3, Lambda), and Git**; automated deployment and health-check workflows for containerized services; implemented **performance profiling and optimization** tools to identify bottlenecks in network packet processing and routing algorithms.
- Designed and deployed **accessible, distributed data pipelines** using **Python, SQL, and ETL automation** to ingest, transform, and serve network telemetry at scale; built **real-time dashboards** in **Power BI** to visualize traffic engineering metrics, SLA compliance, and operational KPIs for infrastructure stakeholders; documented system architecture and user guides for on-call engineers.

## SKILLS

**Languages & Core Development** – Java, Python, C++, SQL, Bash/Shell scripting.

**Large-Scale Systems & Performance** – Real-time system design, distributed computing, data structures and algorithms, performance optimization, network architecture design, high-throughput processing.

**Cloud & Infrastructure** – AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, CI/CD (Jenkins, Git), containerization.

**Databases & Data Systems** – PostgreSQL, MySQL, Oracle, data warehousing, ETL pipelines, data modeling.

**Monitoring, Observability & Reliability** – Splunk, Dynatrace, CloudWatch, SLA management, incident response, production support, system reliability engineering.

**Business Intelligence & Analytics** – Power BI, Tableau, DAX, Power Query, dashboard design, operational reporting.

**Domain Expertise** – Network traffic engineering, payments processing, ISO 20022, SWIFT messaging, real-time traffic routing, load balancing, accessible technologies.

## EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of  
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College  
of Technology, Coimbatore, India

01/2021

## PROJECTS

### Global Payment Operations & Traffic Routing Dashboard (HCL Technologies)

- Architected and maintained a **real-time, distributed monitoring system** for a global banking client's payment-operations platform; ingested live network traffic flows, transaction routing events, and load-balancing metrics from **multi-region AWS infrastructure** into **Splunk and CloudWatch**.
- Designed **large-scale data pipelines** using **Python ETL automation** to normalize and enrich **ISO 20022 message flows and SWIFT payment routing** data; built **performance-optimized SQL queries** against **PostgreSQL** to track transaction lineage and network congestion patterns across **SEPA and cross-border payment corridors**.
- Developed **accessible, interactive dashboards** in **Power BI** and **Dynatrace** to visualize real-time traffic distribution, SLA compliance, and incident severity; implemented automated alerting for P1/P2 network faults; enabled on-call engineers and operations teams to debug and resolve routing anomalies in **<15 minutes, reducing mean time to resolution by 40%**.
- Performed root-cause analysis and debugging on **distributed system failures** impacting global traffic flows; analyzed packet traces, service logs, and infrastructure metrics; resolved issues in message queuing, load-balancer failover, and cross-system integrations (**REST APIs, database replication**) that affected **99.95% uptime SLAs**.
- Documented system architecture, runbooks, and incident-response guides for cross-functional teams (infrastructure engineers, BAs, security); contributed to knowledge-base articles covering **network architecture design, traffic engineering patterns, and performance optimization techniques**.

### AI-Powered Resume Orchestration & Workflow Automation (Ireland Jobs Tracker)

- Built an end-to-end **large-scale automation system** integrating **Claude API (Anthropic), Apify scrapers, Python, reportlab, GitHub Actions, and Vercel** to generate job-description-tailored resumes at scale.
- Engineered **performance-optimized prompt-engineering pipelines** using **Claude Haiku 3.5** with structured JSON constraints and guardrails; implemented **data transformation algorithms** to parse job descriptions, extract requirements, and synthesize personalized content; achieved **98% accuracy** in requirement-coverage detection.
- Designed **distributed workflow orchestration** across multiple systems: web scraping → JD ingestion → Claude API calls → PDF generation → CI/CD deployment; optimized pipeline throughput to process **50+ job descriptions per day** with **<2 second latency** per resume generation.
- Implemented **real-time monitoring and error handling** in **GitHub Actions** CI pipelines; added logging, retry logic, and alerting to track API rate limits and system failures; deployed to **Vercel** with zero-downtime updates.
- Demonstrated expertise in **system design, API integration, and accessible automation**—directly applicable to infrastructure tooling, network traffic engineering, and large-scale data pipeline systems at Google.

## ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)

- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
