PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Drove **Site Reliability Engineering (SRE)** practices across payment gateway production environments at HCL Technologies, ensuring **99.9% uptime** and sustainable incident response through blameless postmortems, MTTR optimization, and cross-functional collaboration with development teams on reliability improvements.
- Designed and implemented **operational readiness frameworks** for SWIFT messaging and payment-operations dashboards, embedding system availability, capacity planning, performance monitoring, and self-healing capabilities throughout the service lifecycle—from design through deployment and continuous improvement cycles.
- Automated certificate lifecycle management, traffic routing, and compliance reporting using **Ansible, shell scripting, and Jenkins CI/CD pipelines**, reducing manual certificate renewal toil by **80%** and ensuring **PCI-DSS & GDPR compliance** across secure payment processing environments.
- Configured and maintained **Splunk and Dynatrace monitoring** with custom alerting rules, dashboards, and observability standards for production payment services; analyzed stack traces, TCP dumps, and application logs to detect anomalies and drive proactive issue resolution.
- Partnered with global development and operations teams across multiple time zones to drive **Safety & Soundness initiatives**, threat reduction, ITSM defect resolution, and operational gating for payment gateway software promotions—mentoring junior engineers on SRE fundamentals and reliability best practices.
- Architected **gRPC event-driven microservice integrations** for payment processing workflows, supporting mutual TLS authentication, SSL/TLS handshake optimization, and secure access practices; validated configuration across **NGINX, load balancers, and application firewalls** for gateway resilience and compliance.

SKILLS

Site Reliability Engineering & DevOps – SRE fundamentals, lifecycle ownership, operational readiness, incident management, blameless postmortems, MTTR optimization, reliability engineering, automation pipelines, continuous improvement.

DevOps Tools & Orchestration – Jenkins, Ansible, Chef, Groovy, shell scripting, Git, Bitbucket, GitHub Actions, XLR template automation, certificate renewal orchestration, Venafi certificate lifecycle management.

Monitoring, Logging & Observability – Splunk, Dynatrace, CloudWatch, custom alerting, logging standards, performance dashboards, stack trace analysis, TCP dumps, heap/thread dumps, OS-level troubleshooting.

Payment Domains & Compliance – Payment gateway architecture, SWIFT messaging (MT/MX), ISO 20022 message flows, gRPC event-driven architectures, PCI-DSS compliance, GDPR data protection, SEPA/cross-border payments, ITSM processes, Safety & Soundness.

Infrastructure, Security & Networking – AWS (EC2, S3, Lambda), cloud-native deployments, NGINX configuration, BIG-IP F5 load balancers, application firewalls, mutual TLS, SSL/TLS handshake, certificate lifecycle management, SSH key management, encryption standards, client-server architectures, network layers (L1–L7).

Authentication, Authorization & Systems Integration – Active Directory, SAML, LTPA, SSO, OAuth, secure access practices, REST API integrations, enterprise system interconnections, change-control management, UAT coordination.

Languages & Data Technologies – Python, Java, SQL, Docker, Linux, PostgreSQL, MySQL, Oracle, Power BI, Tableau, pandas, NumPy, data modelling, data warehousing.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Payment Operations & SWIFT Gateway Dashboard (HCL Technologies | Sep 2021 – Jan 2025)

- Stewarded production readiness and operational resilience for a **SWIFT messaging and payment-operations dashboard** supporting a tier-1 banking client, ensuring **100% SLA compliance** for transaction-flow visibility and operational alerting across payment message processing.
- Implemented **Splunk and Dynatrace monitoring with custom alerting** for real-time detection of payment processing anomalies, achieving **15-minute MTTR** for P1/P2 incidents; designed dashboards for payment reconciliation workflows, SEPA/cross-border transaction tracking, and ISO 20022 message validation.
- Automated **certificate lifecycle management and secure token rotation** for mutual TLS authentication in payment gateway flows using **Ansible and Jenkins pipelines**, eliminating **40 manual renewal tasks/quarter** and ensuring **PCI-DSS & GDPR compliance** across interconnected banking systems.
- Collaborated with payments operations teams, compliance officers, and development teams to drive **Safety & Soundness initiatives**, threat reduction, and compliance reporting; led blameless postmortems on production incidents and mentored junior SRE engineers on observability best practices.

Enterprise Integration & Change-Control Automation (HCL Technologies | Sep 2021 – Jan 2025)

- Designed and maintained **CI/CD pipeline automation** for software promotion and operational gating across interconnected ERP and business-system platforms using **Jenkins, Groovy scripting, and Bitbucket**, reducing change-control cycle time by **35%** and eliminating manual gate-keeping errors.
- Orchestrated **NGINX and BIG-IP F5 configuration management** for load balancing and traffic routing across payment gateway services and application firewalls; validated **gRPC event-driven microservice integrations** and secure client-server relationships across L1–L7 network layers.
- Developed **Python automation scripts and shell-based monitoring** for data validation, schema change audits, and cross-system integration health checks across PostgreSQL, MySQL, and Oracle databases—enabling proactive identification of compliance gaps and operational vulnerabilities.
- Championed **ITSM defect resolution and compliance reporting** initiatives, working across global teams in multiple time zones to drive reliability improvements, reduce operational toil, and embed observability standards throughout the service lifecycle.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
