PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Triaged and investigated **P1/P2 production incidents** across enterprise **Java Spring Boot** and **Angular** applications by correlating events in **Splunk**, **CloudWatch**, and **Dynatrace**; traced issues end-to-end from UI behaviour through service logic to data layer, reducing mean time to resolution (MTTR) by **35%** through systematic root-cause analysis and preventive playbook documentation.
- Implemented targeted code fixes for confirmed bugs in **Java Spring Boot** REST APIs and **Angular** front-end components, ensuring all changes were covered by automated tests, submitted via **Git** pull requests, and reviewed before production deployment; escalated architectural changes and high-risk codebase modifications to senior engineers per change-control policy.
- Built and maintained internal tooling and diagnostic dashboards using **Python** scripting, **SQL** query utilities, and **AWS CloudWatch** metrics to automate recurring production investigations; created **8+ debugging playbooks** covering common incident patterns, reducing manual investigation time by **40%** and enabling team-wide incident response consistency.
- Evaluated and assessed observability and incident-management technologies for operational efficiency improvements; produced formal capability assessments covering integration effort, cost-benefit analysis, and tooling recommendations, shared with engineering leadership to inform platform modernization decisions.
- Navigated **AWS** infrastructure—including **EC2**, **S3**, and **CloudWatch** logs and metrics—to support production investigations and identify environment-level contributors to incidents; collaborated with DevOps to implement infrastructure changes as part of incident resolution workflows.
- Produced clear post-incident summaries documenting incident timeline, root cause analysis, resolution steps, and preventive measures; updated playbook library after every significant incident to incorporate new learnings and close gaps in team diagnostic knowledge.

SKILLS

Backend & Full-Stack Engineering – Java Spring Boot, REST APIs, bug fixing, code review, pull-request workflows, Git branching strategies.

Frontend Engineering – Angular, UI troubleshooting, end-to-end tracing from client to backend.

Production Monitoring & Observability – Splunk, Dynatrace, CloudWatch, log querying, metrics correlation, SLA management, incident response.

AWS Infrastructure & Operations – EC2, S3, CloudWatch, Lambda, infrastructure navigation for production investigations, DevOps collaboration.

Internal Tooling & Automation – Python scripting, SQL query utilities, diagnostic dashboards, automation scripts, scheduling, cron jobs.

Databases & Data Operations – PostgreSQL, MySQL, Oracle, ad-hoc queries, data validation, schema review.

Incident Management & Documentation – Post-incident summaries, root-cause analysis, debugging playbooks, knowledge base maintenance, change-control procedures.

EDUCATION AND TRAINING

PROJECTS

Production SaaS Stability & Incident Investigation Platform (HCL Technologies)

- Led production support and incident triage for enterprise **Java Spring Boot** and **Angular** SaaS applications serving financial-services clients; managed **P1/P2 incident workflows**, coordinating root-cause analysis across front-end, backend, and infrastructure layers using **Splunk**, **CloudWatch**, and **Dynatrace**.
- Designed and deployed **internal diagnostic dashboards** using **SQL** and **Python** automation to surface recurring production issues; built **automated log-query utilities** and incident-investigation scripts that reduced diagnostic time by **40%** and standardized troubleshooting procedures across the support team.
- Developed comprehensive library of **debugging playbooks** and **operational runbooks** covering authentication failures, data reconciliation errors, API latency, and database contention scenarios; updated playbooks iteratively after each significant incident to reflect new patterns and preventive measures.

SWIFT Payments Operations Dashboard & SaaS Reliability (HCL Technologies)

- Maintained production **SWIFT messaging** and payments-operations dashboard supporting tier-1 banking client; performed **end-to-end incident investigation** across **Java Spring Boot** backend services, **Angular** dashboard UI, and **AWS** infrastructure to resolve transaction-flow visibility gaps and operational alerting failures.
- Implemented targeted **code fixes** for payment-processing bugs in **Java** SWIFT message handlers and API endpoints; ensured all changes were tested, reviewed, and deployed under strict change-control procedures required by financial-services regulatory compliance (GDPR, PSD2, ISO 20022 message-flow requirements).
- Built **operational reporting and monitoring tools** using **Python**, **SQL**, and **AWS CloudWatch** to provide real-time visibility into SEPA payment flows, cross-border transaction latency, and message reconciliation status; created **SLA-focused dashboards** that enabled proactive incident prevention and reduced mean time to detection (MTTD) by **25%**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
