PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and maintained **data pipelines** using **Python** (pandas, NumPy) and **SQL** (PostgreSQL, MySQL, Oracle) for enterprise systems, enabling real-time monitoring and **SLA-driven incident response** across production environments.
- Built **automation frameworks** and **ETL workflows** to transform operational data into actionable insights, reducing manual reporting overhead by automating scheduled data validation and schema management tasks.
- Developed **REST APIs** and microservices using **Java Spring Boot**, integrated with **AWS** infrastructure (EC2, S3, Lambda, CloudWatch), supporting scalable backend systems for enterprise applications.
- Leveraged observability platforms (**Splunk, Dynatrace, CloudWatch**) to monitor system performance and identify optimization opportunities, translating operational metrics into data-driven recommendations for efficiency improvements.
- Implemented **CI/CD pipelines** using **Jenkins** and **Git**, establishing code quality gates and deployment automation that improved release reliability and team velocity in Agile/Scrum environments.
- Demonstrated proficiency in **Linux** system administration, shell scripting, and containerization (**Docker**) to deploy and manage applications, with hands-on experience in infrastructure automation and log analysis.

PROJECTS

Enterprise Application Monitoring & Optimization (HCL Technologies)

- Architected **production support workflows** using **Splunk** and **Dynatrace** to monitor mission-critical Java/.NET applications, reducing mean-time-to-resolution (MTTR) for P1/P2 incidents by implementing automated alerting and intelligent baselining.
- Designed **SQL-based data validation** and **ETL pipelines** to extract operational metrics from multiple sources, creating a structured data foundation for performance analysis and trend forecasting.

- Collaborated with operations teams to translate system bottlenecks into **optimization problems**, implementing targeted improvements that enhanced resource utilization and operational efficiency across distributed cloud infrastructure.

Automation & Infrastructure Engineering (HCL Technologies)

- Developed **Python automation scripts** and scheduled **cron jobs** to eliminate manual operational toil, automating data ingestion, validation, and reporting tasks that improved team productivity by **30%**.
- Built and maintained **Jenkins CI/CD pipelines** with **Git** version control and code review processes, enabling reliable deployments of **Spring Boot microservices** to **AWS** environments (EC2, S3, Lambda).
- Containerized legacy applications using **Docker** and managed infrastructure-as-code practices, reducing deployment time and standardizing application delivery across development and production environments.
