PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Operated and monitored enterprise data center network infrastructure including routing, switching, and Layer 1–3 devices; diagnosed and isolated **fault conditions across network device types** using **SolarWinds and Dynatrace monitoring tools**, reducing mean time to resolution (MTTR) by **35%** through documented **Methods of Procedure (MOPs) and Standard Operating Procedures (SOPs)**.
- Managed **DC network infrastructure ticket queues** and incident acknowledgment workflows within **Jira ticketing system**; categorized incidents by severity and impact, escalated critical events to smart hands teams and network equipment manufacturers, and maintained **SLA compliance at 98%** through accurate incident tracking and detailed troubleshooting documentation.
- Performed **fault isolation and resolution** on physical network components including cables, patch panels, optics, and transceivers; coordinated cross-functionally with regional network operational support teams and partner escalation workflows to minimize operational impact, reducing unplanned downtime by **40%** across interconnected data center systems.
- Documented and optimized **network changes including VLAN configurations, subnet updates, and DNS modifications**; created **monitoring dashboards, alerts, and operational metrics** using **Power BI and Tableau** to drive efficiency improvements and support deployment, move, add, and change (MAC) teams with accurate infrastructure inventory and audit-ready records.
- Developed **Python and shell scripts** to automate incident detection, alert routing, and ticket status updates; identified and implemented automation solutions that reduced manual ticket processing by **45%** and enhanced troubleshooting velocity across the network operations center.
- Applied **CLI command-line interface skills** for router and switch diagnostics; followed **Return Merchandise Authorization (RMA) processes** for vendor equipment; maintained detailed **incident logs and resolution records** in ticketing systems with high accuracy, enabling root-cause analysis and continuous operational improvement recommendations to stakeholders.

SKILLS

Network Operations & Monitoring – Data Center network troubleshooting, routing and switching device operation, Layer 1–3 fault isolation, SolarWinds, Dynatrace, PRTG, physical network component diagnostics (cables, patch panels, optics, transceivers), CLI for routers and switches.

Incident Management & SLA Compliance – Ticket queue management, incident acknowledgment and escalation, Jira ticketing system, ServiceNow workflows, SLA tracking and compliance monitoring, incident categorization by severity and impact, cross-regional escalation coordination.

Network Infrastructure Documentation – VLAN configuration documentation, subnet management, DNS updates, RMA processes, network change logs, inventory tracking and audit support, Methods of Procedure (MOPs), Standard Operating Procedures (SOPs).

Automation & Scripting – Python scripting, shell scripting, alert automation, ticket status automation, monitoring dashboard creation, metrics and KPI tracking, continuous improvement recommendations.

Business Intelligence & Reporting – Power BI dashboards, Tableau visualizations, operational metrics and KPI dashboards, data modelling, real-time alert thresholds and monitoring logic.

Data Center Operations & Change Management – Deployment and MAC (move, add, change) support, smart hands team coordination, vendor communication and RMA workflows, cross-functional team collaboration, operational process optimization.

Core Technical Foundation – IP addressing and subnetting, VLAN configuration, routing protocols, switching fundamentals, Linux command-line operations, Git version control, Agile and ticketing methodologies.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India

01/2021

PROJECTS

Multi-Tier Data Center Network Monitoring & Incident Automation Platform (HCL Technologies)

- Architected an end-to-end **network operations monitoring and automated incident response platform** integrating **SolarWinds, Dynatrace, and Jira** to detect and isolate **Layer 1–3 faults across 500+ routing, switching, and physical network devices** in a multi-region data center environment.
- Developed **Python automation scripts** to ingest raw monitoring alerts from **SolarWinds SNMP traps and Dynatrace synthetic monitors**, apply intelligent fault correlation logic, and auto-populate **Jira incidents with categorized severity, impact, and escalation rules** — reducing manual ticket creation overhead by **60%** and accelerating MTTR from **45 minutes to 12 minutes**.
- Built **Power BI dashboards** and **Tableau visualizations** to track real-time **SLA compliance, incident volume by severity, MTTR trends, and network device health metrics**; automated daily operational reports with drill-down capability into individual incident troubleshooting steps and resolution timelines for stakeholder visibility.
- Documented comprehensive **Methods of Procedure (MOPs) and Standard Operating Procedures (SOPs)** for fault isolation on physical network components (cables, patch panels, optics, transceivers), CLI-based diagnostics for routers and switches, and escalation workflows to smart hands teams and equipment manufacturers — reducing onboarding time for new NOC engineers by **50%**.
- Implemented **automated RMA tracking and vendor coordination workflows** integrated with **Jira ServiceNow integrations**, maintaining audit-ready inventory of all network infrastructure changes (VLAN configs, subnet updates, DNS modifications) and enabling zero-touch compliance verification for regulatory audits.

SWIFT Payments Dashboard & Network Operations Center SLA Monitoring (HCL Technologies)

- Operated production **network monitoring and alerting infrastructure** for a banking client's **SWIFT messaging payments operations dashboard**, handling **P1/P2 incident response** for **cross-border payment processing flows** with strict **SLA compliance requirements** in a heavily regulated financial services environment.
- Documented and maintained **audit trails, change logs, and DNS/VLAN configuration updates** to support **GDPR and Data Protection regulatory compliance**; coordinated incident escalation with banking operations teams and cross-functional network support groups to restore payment message visibility and transaction-flow stability within critical time windows.
- Created **operational dashboards and alert thresholds** for **ISO 20022 message flows, SEPA instant payment processing, and tokenization status** — enabling real-time visibility into payment infrastructure health and reducing unplanned downtime impact on banking SLAs by **38%**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
