PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Gathered and documented requirements across 40+ stakeholder interviews and workshops with banking operations teams, translating complex business processes into clear, actionable user stories and functional specifications for SWIFT messaging dashboard enhancements; aligned deliverables with regulatory compliance (GDPR, ISO 20022 message flows) through structured requirement elicitation, reducing UAT defect count by **35%**.
- Conducted gap analysis and process mapping on payments-operations workflows to identify **12 optimization opportunities** for AI-driven automation, including transaction-flow visibility enhancements and intelligent alerting; documented findings in Confluence and prioritized backlog items within Agile/Scrum ceremonies, enabling cross-functional teams to evaluate ML use cases for operational efficiency.
- Facilitated User Acceptance Testing (UAT) by designing **50+ test scripts** and coordinating with business stakeholders to validate software alignment with original business intent; tracked defects in **Jira**, managed change-control workflows, and ensured post-go-live support achieved **99.9% SLA compliance** on production systems.
- Applied data analytics and statistical methods to interpret complex transaction data, generating insights on payment-processing bottlenecks and reconciliation workflows; presented findings to non-technical stakeholders using **Power BI dashboards** and **Tableau visualizations**, supporting data-driven decision-making on system optimization priorities.
- Supported the development lifecycle of interconnected enterprise systems by bridging technical teams (Java/Spring Boot, Python, SQL, AWS) and business stakeholders; documented system integrations via **REST APIs** and **database-level data flows**, ensuring requirements translated accurately into working software across PostgreSQL, Oracle, and MySQL environments.
- Evaluated AI and machine learning applications for business problem-solving, including supervised learning models for transaction classification and unsupervised clustering for anomaly detection in payments data; understood data requirements, success metrics, and use-case validation through practical coursework in **scikit-learn**, **R statistical analysis**, and **feature engineering**.

SKILLS

Business Analysis & Requirements – requirement elicitation, stakeholder workshops, user story writing, functional specifications, gap analysis, process mapping, UAT design and facilitation.

Agile & Project Management – Agile/Scrum frameworks, Jira ticketing and backlog management, change-control management, Confluence documentation, UAT coordination, post-implementation support.

AI & Data Science – AI use-case definition, machine learning fundamentals (supervised/unsupervised), data requirements analysis, success metrics, scikit-learn, R statistical analysis, hypothesis testing, model evaluation.

Data Analytics & BI – Power BI dashboards and DAX measures, Tableau interactive visualizations, data modelling, Power Query ETL, SQL (PostgreSQL, MySQL, Oracle), exploratory data analysis, A/B testing.

Software Development & Integration – Java Spring Boot, Python scripting, REST API integration, SQL data validation, AWS (EC2, S3, Lambda, CloudWatch), Docker containerization, CI/CD with Jenkins, Git, Linux.

Domain Expertise – banking and financial services, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA and cross-border payments, PSD2, payments processing, reconciliation workflows, regulatory compliance

(GDPR), ERP systems.

Communication & Stakeholder Management – cross-functional collaboration, presenting insights to non-technical audiences, documentation, training materials, domain-expert liaison.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

AI-Driven Payment Operations Intelligence Platform (HCL Technologies)

- Designed and validated AI use cases for real-time transaction anomaly detection and process optimization within a banking payments-operations environment; conducted gap analysis on **15 end-to-end payment workflows** and identified **8 high-impact automation opportunities** using process-mapping workshops with stakeholders.
- Built data requirements specification and success metrics for a **supervised classification model** (scikit-learn) to categorize payment exceptions and route to appropriate queues; collaborated with data engineers to engineer **45 features** from transaction and reconciliation data, achieving **94% precision** on hold-out test set.
- Facilitated UAT across 3 cross-border payment processing teams by creating **65+ test scripts** covering SEPA, ISO 20022, and PSD2 compliance workflows; validated AI-generated insights against business intent, reduced manual exception handling by **40%**, and documented change-control procedures in Jira for post-implementation support.
- Presented AI performance dashboards and operational KPIs to non-technical business stakeholders using **Power BI** and **Tableau**, including model accuracy, transaction throughput gains, and reconciliation time reduction; recommendations informed a **€200K+ investment decision** in platform automation.
- Maintained Agile backlog and sprint documentation across 6-month implementation cycle; coordinated UAT, change requests, and post-go-live incident triage, achieving **99.5% system availability** and **12-hour mean time to resolution** on production P1/P2 alerts.

SWIFT Payments Dashboard & Regulatory Compliance Reporting (HCL Technologies)

- Documented functional specifications and regulatory requirements for SWIFT MT/MX message-flow monitoring dashboard supporting real-time payment-operations visibility; conducted **20+ requirement workshops** with banking compliance and operations teams to translate GDPR, ISO 20022, and SEPA regulatory mandates into actionable user stories.
- Designed UAT test scripts and coordinated acceptance testing across 4 regulatory and operations stakeholders; validated dashboard accuracy against SWIFT message formats, reconciliation logic, and audit-trail completeness; reduced production defects by **32%** through rigorous test coverage and stakeholder sign-off.
- Created operational reporting dashboards in **Power BI** and **Splunk** to track payment-transaction SLAs, message-processing latency, and compliance exceptions; presented insights to non-technical banking managers to support real-time incident response and process improvement decisions.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)

- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
