PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Developed and maintained **microservices** and **REST APIs** using **Java Spring Boot** and **Python**, implementing high-concurrency service patterns and distributed system design principles across enterprise banking applications serving 50+ daily transaction workflows with **99.8% uptime SLA**.
- Architected and deployed **cloud-native applications** leveraging **Docker containerization** and **AWS** infrastructure (**EC2, S3, Lambda, CloudWatch**), establishing **Kubernetes**-ready deployment pipelines that reduced application startup time by **40%** and improved resource utilization efficiency.
- Designed and optimized **microservice architecture** with comprehensive **API design patterns**, building **REST APIs** for cross-system integrations across **PostgreSQL, MySQL, and Oracle** databases, enabling real-time data synchronization across interconnected enterprise platforms with **sub-100ms latency**.
- Executed end-to-end **application development lifecycle** including feature development, testing, debugging, and system upgrades using **Git, Jenkins CI/CD pipelines**, and code review workflows to ship robust, responsive microservices that reduced production defects by **35%** and improved deployment frequency to **daily releases**.
- Troubleshoot, debugged, and upgraded production systems using **Splunk, Dynatrace, CloudWatch** for operational observability, reducing mean-time-to-recovery (MTTR) by **45%** through proactive monitoring, incident response automation, and cross-functional collaboration with platform engineering and business stakeholders.
- Partnered with cross-functional teams including product managers, BAs, and operations to understand requirements, design scalable solutions, and deliver **high-quality features** across hybrid cloud environments, documented technical architecture and onboarding materials in **Confluence**, ensuring knowledge portability across global engineering teams.

SKILLS

Cloud Platforms & Containerization – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, cloud-native application development, IaaS, PaaS.

Backend Development & Microservices – Java Spring Boot, Python, REST API design, microservice architecture, distributed systems, high-concurrency service patterns, API integration.

Databases & Data Management – PostgreSQL, MySQL, Oracle, database design, database management, schema design, data modeling, data warehousing.

DevOps & CI/CD – Jenkins, Git, code review workflows, change-control management, deployment automation, GitOps practices.

Monitoring & Reliability – Splunk, Dynatrace, CloudWatch, operational observability, incident management, SLA tracking, system reliability engineering.

Languages & Scripting – Python, Javascript, Golang, shell scripting, automation, data pipeline development.

Collaboration & Communication – Agile/Scrum ceremonies, cross-functional stakeholder engagement, technical documentation, Confluence, Jira, verbal and written communication at scale.

EDUCATION AND TRAINING

PROJECTS

Cloud-Native Microservices Payment Processing Platform (HCL Technologies)

- Designed and implemented a **containerized, Kubernetes-orchestrated microservices architecture** for a high-concurrency payments platform, decomposing monolithic Java Spring Boot application into **12 independently deployable services** communicating via **REST APIs** and event-driven patterns, achieving **3x throughput improvement** (500K → 1.5M transactions/day).
- Engineered robust **database abstraction layer** supporting dynamic failover across **PostgreSQL, MySQL, and Oracle** instances with real-time replication, implementing **connection pooling and query optimization** that reduced database MTTR by **60%** and improved query latency from **850ms to 120ms** for reconciliation queries.
- Built comprehensive **cloud observability stack** integrating **Dynatrace APM, CloudWatch metrics, and Splunk centralized logging**, implementing automated alerting rules and dashboards that reduced incident discovery time by **70%** and enabled on-call engineers to resolve P1 issues within **15 minutes**.
- Automated CI/CD pipeline using **Jenkins, Git, and Kubernetes manifests**, implementing **blue-green deployment strategies** with automated rollback capabilities, enabling **daily zero-downtime releases** and reducing deployment-related incidents by **90%** while maintaining **99.95% availability SLA**.
- Collaborated cross-functionally with product, operations, and compliance teams to translate business requirements into **scalable, secure microservice designs**, producing **technical architecture documentation, API specifications, and runbook guides** that enabled global engineering teams to onboard and maintain services independently across hybrid AWS and on-premises environments.

Real-Time Distributed Systems Monitoring & Performance Analytics Dashboard (HCL Technologies)

- Developed **Python-based data pipeline** aggregating telemetry from **CloudWatch, Dynatrace, and Splunk** across 50+ microservices, performing statistical analysis and anomaly detection to feed **real-time performance dashboards** that reduced operational visibility blind spots by **80%** and enabled predictive capacity planning.
- Optimized **distributed database queries** across **PostgreSQL and Oracle** using materialized views and indexed aggregations, reducing dashboard refresh latency from **45 seconds to 3 seconds** and supporting concurrent access by **200+ daily stakeholders** without infrastructure scaling.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
