PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Built and deployed **production systems in Python, Java, and SQL** across **AWS cloud infrastructure** (EC2, S3, Lambda, CloudWatch) to detect, investigate, and respond to cybercrime patterns, reducing mean time to detection by **40%** through automated signal enrichment and decisioning logic.
- Designed and implemented **agentic systems and AI-powered workflows** using **Python** data stack (pandas, NumPy, scikit-learn) and **REST APIs** to convert cybercrime intelligence into scalable customer protections, improving investigation throughput by **35%** and reducing manual triage effort by **50%**.
- Developed **production services, APIs, and data pipelines** in **Spring Boot** and **Python** with **PostgreSQL, MySQL, and Oracle** to translate phishing, brand abuse, and digital identity crime patterns into durable engineering solutions, achieving **99.7% SLA uptime** with **P1/P2 incident response protocols**.
- Engineered **distributed systems and cloud-native workflows** using **Docker containerisation, Jenkins CI/CD pipelines, and Git version control** to ship reliable, secure, and scalable cybercrime protection capabilities with **zero-downtime deployments** and comprehensive monitoring via **Splunk and Dynatrace**.
- Investigated cybercrime campaign behavior and threat actor tactics, applying **security research mindset** to design protection signals and abuse-prevention workflows that measurably reduced exploitation attempts by **28%** and accelerated response speed from discovery to deployed protection by **5 days**.
- Owned systems end-to-end—design, build, test, deploy, monitor, and improve—maintaining a high quality bar with rapid production issue response, strong operational discipline, and cross-functional partnerships with security, product, and engineering teams to minimize handoffs and ship customer-facing protections at scale.

SKILLS

Backend & Full Stack Engineering – Python, Java, Spring Boot, REST APIs, SQL, PostgreSQL, MySQL, Oracle, Flask, FastAPI.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, distributed systems, cloud-native architecture.

DevOps & CI/CD – Jenkins pipelines, Git, Linux, shell scripting, containerisation, deployment automation.

Data Engineering & Intelligence – Python data stack (pandas, NumPy, scikit-learn), data pipelines, ETL, Power BI, Tableau, DAX, data modelling, data warehousing.

Observability & Incident Management – Splunk, Dynatrace, CloudWatch, production monitoring, SLA management, P1/P2 incident response, operational alerting.

Security & Cybercrime Domain – Cybercrime investigation, phishing analysis, brand abuse detection, digital identity crime, threat actor tactics, abuse prevention workflows, security research mindset, threat intelligence.

Agentic & AI Systems – Agentic engineering, AI-powered workflows, autonomous tooling, machine learning fundamentals, supervised/unsupervised learning, statistical analysis.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Agentic Cybercrime Intelligence & Response Platform (HCL Technologies)

- Architected and deployed an **end-to-end agentic system in Python and Java** that autonomously discovered, investigated, and triaged cybercrime campaigns targeting eBay-scale ecommerce fraud, phishing, and brand abuse using **AI-powered enrichment workflows** and **REST API integrations** with threat intelligence sources.
- Built **distributed data pipelines in Python** with **PostgreSQL and AWS Lambda** to ingest raw cybercrime signals, apply machine learning-based abuse classifiers (scikit-learn), and route findings to automated response workflows, reducing investigation latency from **48 hours to 6 hours** and scaling to **50,000+ threat cases/week**.
- Engineered **production APIs and microservices in Spring Boot** that exposed decisioning logic, signal confidence scores, and remediation recommendations to downstream security and product teams, enabling **zero-touch automation** for **65%** of routine abuse cases and improving response consistency by **42%**.
- Deployed the platform on **AWS cloud infrastructure** (EC2, S3 for signal storage, Lambda for serverless enrichment) with **Docker containerisation and Jenkins CI/CD pipelines**, achieving **99.8% uptime**, **sub-second API latency**, and enabling **50+ daily deployments** without service interruption.
- Implemented comprehensive **observability and monitoring** via **Splunk and CloudWatch** dashboards tracking abuse-detection accuracy, campaign disruption velocity, and alert-to-action time, surfacing insights that informed threat-hunting priorities and reduced attacker dwell time by **12 days**.

SWIFT Payments Intelligence & Fraud Prevention Dashboard (HCL Technologies)

- Developed production-grade **Power BI dashboards and Tableau visualisations** for a global banking client's payments-operations team, enabling real-time visibility into **SWIFT MT/MX message flows**, transaction anomalies, and fraud signals across **SEPA, instant payments, and cross-border payment corridors** compliant with **ISO 20022 message standards**.
- Engineered **Python ETL pipelines and SQL queries** (PostgreSQL, Oracle) to ingest and reconcile **10M+ daily payment messages**, detect deviations in transaction patterns, and flag suspicious behavioral indicators with **99.2% detection accuracy**, reducing false-positive noise by **31%** through statistical anomaly thresholding.
- Collaborated with banking-domain BAs, compliance teams, and regulators to ensure dashboard KPIs and alert thresholds met **GDPR data protection, audit trail, and regulatory reporting** requirements, supporting successful **PSD2 Open Banking compliance audits** and **zero data-breach incidents**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
