PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Developed **Spring Boot microservices** orchestrating **LLM-powered agents** using **OpenAI specs** and **MCP tool schemas** for agentic workflow automation, reducing manual task execution time by **40%** across 12+ production services at HCL.
- Implemented **tool execution layers**, **function calling**, retry logic, guardrails, and **safety checks** for robust agent behavior within **REST APIs** and **event-driven pipelines**, achieving **99.2% uptime SLA** on critical agent request flows.
- Built **GitHub integration APIs** with **webhooks**, **GitHub Actions**, and **PR review automation** connected to **Claude model endpoints** and **Cline workflows**, enabling developer-focused CI/CD automations that reduced code review cycle time by **35%**.
- Designed **configuration management**, **secrets management**, and **least-privilege access control** for AI services; implemented **prompt injection defenses** and **input validation** to meet internal security standards across all agent deployments.
- Added comprehensive **observability** using **logs**, **metrics**, **traces**, and **run metadata**; created operational dashboards tracking agent reliability and performance with **Datadog** and **OpenTelemetry**, enabling **real-time incident detection** for **SLA management**.
- Implemented **RAG pipelines** with **embeddings** and **lightweight vector stores** for context assembly; engineered **caching and rate-limiting** strategies for cost and performance optimization, reducing API costs by **28%** while maintaining **sub-500ms latency** on agent requests.

SKILLS

Back-End & Agentic Frameworks – Java Spring Boot, LLM orchestration, OpenAI specs, MCP (Model Context Protocol), tool schemas, function calling, agentic workflows.

Agent & AI Integration – Claude model endpoints, LLM integration, tool execution, guardrails, safety checks, prompt injection defenses, input validation, RAG (Retrieval-Augmented Generation), embeddings, vector stores.

APIs & Event Systems – REST APIs, GraphQL, event-driven pipelines, GitHub APIs, GitHub Actions, webhooks, Cline workflows, message systems, SQS, Kafka.

Observability & Performance – Datadog, OpenTelemetry, logs, metrics, traces, run metadata, dashboards, performance tuning, latency optimization, cost optimization, SLA management.

Cloud & DevOps – AWS (EC2, S3, Lambda, CloudWatch), Docker, CI/CD (Jenkins, Git), testing (unit/integration), automated builds/deployments.

Data & Backend Infrastructure – SQL (PostgreSQL, MySQL, Oracle), data modeling, caching, rate-limiting, security (configuration, secrets, access control, least-privilege).

Languages & Tools – Python, Java, SQL, Git, Jira, Confluence, Linux, shell scripting.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

LLM-Powered Developer Agent Platform (HCL Technologies)

- Architected and delivered a **Spring Boot microservices platform** enabling **Claude-driven agentic workflows** for automated code review, GitHub PR analysis, and CI/CD task orchestration; served **50+ developers** across 8 engineering teams.
- Implemented **MCP client/server infrastructure** with **tool schema definitions** for GitHub Actions integration, PR webhook handling, and **function calling** pipelines; enabled agents to autonomously fetch repository context, analyze diffs, and post intelligent review comments with **92% accuracy**.
- Built **RAG-powered context assembly** using embeddings and lightweight vector stores to retrieve relevant code snippets and documentation; integrated **caching and rate-limiting** strategies reducing OpenAI API costs by **31%** while maintaining **<450ms response latency**.
- Deployed comprehensive **observability** with **OpenTelemetry traces**, **Datadog dashboards**, and structured logging to track agent execution, tool invocation success rates, and error patterns; reduced mean-time-to-resolution (MTTR) for agent failures from **90 minutes to 12 minutes**.
- Implemented **security guardrails** including **prompt injection defenses**, **input validation**, **secrets management**, and **least-privilege access control** for agent-to-GitHub token handling; achieved **zero security incidents** across **1M+ agent executions**.

SWIFT Payments Messaging Dashboard & ISO 20022 Migration Engine (HCL Technologies)

- Deployed a **production-grade monitoring dashboard** for **SWIFT MT/MX message flows** and **ISO 20022 message structure validation**, providing real-time transaction-flow visibility and operational alerting across **SEPA instant payments** and **cross-border payment pipelines** for a **Tier-1 banking client**.
- Engineered **REST API integrations** connecting the dashboard to ERP and payments-operations platforms; orchestrated **data flows** across **PostgreSQL, Oracle, and MySQL** to reconcile payment records, detect anomalies, and flag **regulatory compliance** violations with **99.7% detection accuracy**.
- Automated **change-control workflows** and **UAT coordination** for system configuration updates and payment-scheme migrations; reduced post-deployment triage time by **45%** through integrated Jira ticketing, CI/CD validation, and cross-functional handoff automation.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
