PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **scalable, event-driven microservices** using **Java Spring Boot** and **REST APIs** supporting real-time trading and risk decision systems; achieved **99.95% uptime SLA** through robust error handling, circuit breakers, and graceful degradation patterns across interconnected backend services.
- Enhanced system reliability and performance by architecting **high-performance data pipelines** with **Python** and **SQL (PostgreSQL, Oracle)** to aggregate live market signals and settlement data; reduced end-to-end latency by **40%** through optimized query execution and ETL automation using **scheduled jobs** and **orchestration frameworks**.
- Deployed and monitored production trading applications on **AWS (EC2, S3, Lambda, CloudWatch)** with **Docker containerisation** and **Jenkins CI/CD pipelines**; established automated alerting thresholds and **real-time dashboards** using **CloudWatch** and **Dynatrace** to detect anomalies and reduce incident response time by **50%**.
- Contributed to secure, compliant platform architecture by implementing audit logging, data validation, and regulatory-aligned change-control workflows; applied **GDPR** data protection principles and **ISO 20022** message-validation patterns to ensure trading event integrity and auditability across multi-region deployment.
- Wrote efficient, modular, and testable code adhering to clean architecture principles; performed **code reviews** on **Git** branches, elevated code quality through knowledge sharing, and collaborated with **Product, Quant, and Engineering teams** via **Jira** and **Confluence** to align delivery of stable trading applications with product vision.
- Supported the product lifecycle from concept through development, deployment, and post-launch reliability; conducted **UAT coordination** with cross-functional stakeholders, triaged production incidents with **P1/P2 SLA management**, and analyzed complex multifaceted trading-system problems using **Linux** diagnostics and **log analysis** to improve overall performance and scalability.

SKILLS

Languages & Runtime – Java, Python, SQL, Bash/Shell, R.

Backend & Frameworks – Spring Boot, REST APIs, Microservices, Event-Driven Architecture, FastAPI, Flask.

Cloud & DevOps – AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, Jenkins, Git, CI/CD Pipelines, Linux.

Databases & Data Engineering – PostgreSQL, Oracle, MySQL, Data Pipelines, ETL, Data Modelling, SQL Optimization.

Monitoring & Observability – CloudWatch, Dynatrace, Splunk, Real-Time Dashboards, Alerting, Log Analysis.

Data Analytics & BI – Power BI, Tableau, DAX, Power Query, Data Warehousing, Business Intelligence.

Domain & Compliance – ISO 20022 Message Flows, GDPR Data Protection, Financial Regulatory Frameworks, Change-Control Management, Agile/Scrum.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Real-Time Trading Risk & Event Aggregation Platform (HCL Technologies)

- Architected and deployed a **scalable, event-driven platform** ingesting **real-time market signals, settlement events, and trading decisions** via **Spring Boot microservices** and **Kafka-style message streaming**; processed **500K+ trading events per minute** with **sub-100ms latency** to support live risk-decision workflows.
- Built resilient **Python-based data aggregation pipelines** using **pandas, NumPy, and SQL (PostgreSQL)** to normalize, validate, and enrich trading data; implemented **ISO 20022 message-format compliance checks** and audit-trail logging to meet regulatory requirements, reducing data-integrity issues by **95%**.
- Deployed microservices on **AWS (ECS, Lambda, CloudWatch)** with **Docker containerisation** and **Jenkins multi-branch CI/CD pipelines**; configured **real-time CloudWatch dashboards** tracking transaction throughput, error rates, and trading P&L; achieved **99.95% availability** through automated scaling and circuit-breaker failover.
- Implemented secure, compliant architecture with **GDPR-aligned data encryption**, role-based access control, and **change-control workflows**; performed **code reviews** and led knowledge-sharing sessions on **event-sourcing patterns** and **distributed-system tracing** across engineering and Quant teams.
- Delivered stable, production-ready system through comprehensive **UAT coordination** with Product and Risk stakeholders; monitored **P1/P2 incidents** in live trading environments, diagnosed complex system failures using **Linux log analysis** and **Dynatrace APM**, and reduced mean-time-to-resolution by **45%**.

Payments Operations & SWIFT Messaging Monitoring Dashboard (HCL Technologies)

- Built and maintained a **real-time operational dashboard** for a major banking client's payment-messaging infrastructure, delivering visibility into **SWIFT MT/MX message flows, transaction settlement, and cross-border payment orchestration** across multiple payment rails.
- Implemented **ISO 20022 message validation** and **SEPA payment-flow monitoring** using **Python ETL scripts and SQL queries**; created **Power BI dashboards with DAX measures** for SLA tracking, transaction reconciliation, and regulatory audit reporting, reducing payment-ops investigation time by **35%**.
- Supported **GDPR compliance** and **PSD2 regulatory requirements** through audit-trail logging, data-masking policies, and change-control governance; collaborated with banking-domain BAs and compliance teams to ensure all payment-messaging workflows met financial-services production standards.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
