PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Partnered with business stakeholders and product managers to gather, analyse, and document business and functional requirements using **business requirement documents, process flows, and use cases**; translated complex financial services needs into **user stories** with clear acceptance criteria, achieving **92% first-pass story acceptance** rate across quarterly planning cycles.
- Managed product backlogs and sprint planning using **JIRA and Confluence**; led **refinement sessions** applying **Acceptance Test-Driven Development (ATDD)** principles to ensure stories were sprint-ready; coordinated sign-offs with development teams and QA to validate delivery against requirements, reducing rework by **35%**.
- Identified and managed risks and dependencies across interconnected enterprise systems; documented change-control requirements for **ERP integrations, SWIFT messaging platforms, and multi-system architectures**; coordinated UAT activities and post-go-live support across **global, distributed teams**, ensuring **100% SLA compliance** for critical financial workflows.
- Demonstrated expertise in **SQL analysis and data interpretation** using **SQL Developer** to query production databases (**PostgreSQL, Oracle, MySQL**), validate data models, and extract insights for story refinement and acceptance testing; supported technical teams in debugging application behaviour and data flows.
- Proactively identified opportunities for process and system improvements in payments operations, reconciliation workflows, and regulatory compliance frameworks; documented findings in **Confluence** and championed automation initiatives that reduced manual intervention by **40%** and accelerated settlement cycles by **2 business days**.
- Applied **Agile Scrum** ceremonies, artefacts, and practices across multi-disciplinary teams; demonstrated Fidelity's leadership principles through transparent communication, cross-functional collaboration with technology partners and business advisors, and a commitment to innovation in financial services systems analysis.

SKILLS

Business Analysis & Requirements – business requirement documents, process flows, use cases, user story development, acceptance criteria, functional requirements analysis.

Product & Backlog Management – JIRA, Confluence, sprint planning, backlog prioritization, quarterly planning, refinement sessions, Acceptance Test-Driven Development (ATDD).

Financial Services Domain – payments operations, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA, cross-border payments, PSD2, reconciliation workflows, regulatory compliance, GDPR, investment management fundamentals.

Analysis & Testing Tools – SQL Developer, Insomnia, SQL querying (PostgreSQL, Oracle, MySQL), data model interpretation, Datadog monitoring, application architecture analysis.

Agile & Development Practices – Scrum ceremonies, Agile workflows, risk and dependency management, UAT coordination, end-to-end testing validation, change-control management.

Enterprise Systems & Integration – ERP integration support, REST API analysis, multi-system data flows, application architecture understanding, production support coordination.

Communication & Stakeholder Management – written and verbal communication, cross-functional collaboration, global distributed teams, business stakeholder partnership, technical and non-technical audience

engagement.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Investment Operations Requirements Platform – Systems Analysis & ATDD Roadmap (HCL Technologies)

- Led end-to-end business requirements analysis for a multi-phase investment operations modernization initiative spanning trade settlement, fund reconciliation, and compliance reporting; partnered with wealth management business stakeholders and Fidelity-aligned product managers to define **process flows, business requirement documents, and 120+ user stories** across 4 quarterly planning cycles.
- Designed and executed **Acceptance Test-Driven Development (ATDD)** framework by collaborating with QA and development teams to define story acceptance tests before sprint execution; documented test cases in **Confluence** and refined **user stories** using **JIRA**, reducing **post-sprint defect escapes by 48%** and achieving **95% test coverage** for regulatory scenarios.
- Managed critical risks and dependencies across interconnected **ERP integration points, SWIFT messaging platforms, and data warehouse systems**; identified **3 architectural misalignments** during refinement that could have delayed go-live by 6 weeks, escalated proactively, and coordinated remediation with technology partners, ensuring **on-time delivery** and zero compliance violations.
- Applied **SQL analysis and data model interpretation** using **SQL Developer** to validate fund position data, reconciliation logic, and settlement instruction formats across **PostgreSQL and Oracle** production tables; identified **2 data-mapping anomalies** that would have caused settlement failures, embedded findings into acceptance criteria, and supported UAT teams in validation.
- Proactively identified **process improvement opportunities** including automated exception handling for failed reconciliations and real-time regulatory reporting; documented proposals in **Confluence** and pitched to product leadership; 2 initiatives were prioritized and delivered in subsequent releases, reducing operational overhead by **1,200 manual hours annually**.

SWIFT Payments Operations Dashboard – Business Requirements & Stakeholder Alignment (HCL Technologies)

- Partnered with banking operations and compliance teams to gather and translate **SWIFT messaging, ISO 20022, and SEPA payment processing** requirements into clear user stories; documented **business requirement documents and use cases** for transaction-flow visibility, SLA alerting, and regulatory audit-trail features, supporting **€2.5B monthly payment volume**.
- Refined stories using **ATDD principles** with QA and development; defined acceptance tests for payment message format validation, cross-border settlement workflows, and GDPR data-protection compliance; coordinated **sign-offs** with banking stakeholders, achieving **99.8% production stability** for critical payment rails.
- Identified and managed dependencies across **REST API integrations, multi-system data flows, and ERP payment modules**; documented **change-control requirements** and coordinated UAT with global banking operations teams across **3 geographies**, reducing post-go-live incidents by **65%** and accelerating incident response to **15 minutes average SLA**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
