PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed, developed, and maintained **Python** microservices using **REST APIs** and **object-oriented design principles** for enterprise applications supporting 50+ concurrent users; implemented **clean code** practices across 15+ feature releases with 99.2% uptime SLA.
- Built and deployed **serverless applications** leveraging **AWS Lambda**, **API Gateway**, and **DynamoDB** for real-time transaction processing; optimized query performance across NoSQL databases reducing latency by **40%** and infrastructure costs by **\$180K annually**.
- Designed and implemented **Infrastructure-as-Code** automation using **CloudFormation** and **Terraform** to provision and manage cloud resources; standardized deployment pipelines across 12 microservices, reducing provisioning time from 4 hours to **15 minutes**.
- Collaborated with product managers, architects, and engineers to contribute to **system design and technical decision-making** in cloud-based, serverless environments; led code reviews and pair programming sessions that improved code quality metrics by **35%**.
- Investigated, troubleshooted, and resolved **software defects and performance issues** in production using **CloudWatch**, **Dynatrace**, and **Splunk**; implemented automated alerting and dashboards for continuous monitoring of application reliability and incident response (**P1/P2 SLA compliance 98%**).
- Assisted in continuous improvement of **development processes and delivery pipelines** by automating testing workflows with **Python** scripting, implementing **Git** branching strategies, and optimizing **Jenkins** CI/CD pipelines; reduced deployment cycle time by **50%** across the engineering team.

SKILLS

Languages & Core Development – Python, JavaScript, TypeScript, Java, SQL (PostgreSQL, MySQL, Oracle).

AWS Services & Cloud Infrastructure – Lambda, API Gateway, DynamoDB, S3, CloudWatch, EC2, Infrastructure-as-Code (Terraform, CloudFormation).

Application Development & Architecture – Spring Boot, REST APIs, object-oriented design, clean code principles, microservices, serverless architecture, NoSQL databases.

DevOps, CI/CD & Monitoring – Jenkins, Git, Docker, CloudWatch, Dynatrace, Splunk, code reviews, pair programming.

Data Engineering & Analytics – pandas, NumPy, scikit-learn, Power BI, Tableau, Power Query, ETL, data modelling, data warehousing.

Frontend Frameworks – React, Angular.

Methodologies & Processes – Agile, Scrum, change-control management, UAT coordination, software testing, performance optimization.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Serverless Transaction Processing & DynamoDB Analytics Platform (HCL Technologies)

- Architected and deployed a **serverless transaction processing engine** using **AWS Lambda**, **API Gateway**, and **DynamoDB** to handle real-time payment-operations workloads; platform processed **2.5M+ transactions daily** with **99.95% availability** and sub-100ms latency.
- Designed **Infrastructure-as-Code templates** using **Terraform** and **CloudFormation** to automate multi-region deployment, auto-scaling, and disaster-recovery configuration; reduced infrastructure provisioning time from 6 hours to **20 minutes** and enabled zero-downtime updates across 8 environments.
- Developed **Python data pipelines** with **pandas** and **NumPy** to extract, transform, and load transaction data from **DynamoDB** into **Power BI** for real-time operational dashboards; automated daily reconciliation reports reducing manual data validation effort by **75%**.
- Implemented **system monitoring and alerting** using **CloudWatch** and **Dynatrace** with custom Python Lambda functions; achieved **99.2% SLA compliance** on P1/P2 incident response through automated anomaly detection and 24/7 operational visibility.
- Conducted code reviews and pair programming sessions to establish **clean code principles** and **object-oriented design** standards across the platform team; improved code coverage from 58% to **89%** and reduced production defect escape rate by **42%**.

Swift Payments Dashboard & ISO 20022 Message Processing System (HCL Technologies)

- Developed and maintained production-grade **Python REST APIs** and **Spring Boot microservices** supporting SWIFT MT/MX message processing and ISO 20022 transaction flows for a tier-1 banking client; sustained **99.8% uptime SLA** across 40+ concurrent payment operations users.
- Designed **Infrastructure-as-Code** configurations using **CloudFormation** to provision secure AWS environments (EC2, S3, Lambda) compliant with banking regulatory requirements (GDPR, PSD2); automated deployment of payment-processing services across development, UAT, and production environments.
- Built automated monitoring dashboards using **Splunk** and **CloudWatch** to provide real-time visibility into SEPA/cross-border payment message flows; reduced mean-time-to-resolution for payment blockages from 45 minutes to **8 minutes** through intelligent alerting and incident escalation workflows.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California**, Davis (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
