PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Diagnosed and troubleshoot **data center operational blockers** and enterprise system issues across interconnected backend platforms at scale, resolving **P1/P2 incidents** within SLA using **Splunk, CloudWatch, and Dynatrace** monitoring to achieve **99.5% system uptime** and drive swift stakeholder resolution for production environments.
- Designed and iterated on **automated frameworks and internal tools** using **Python, Shell scripting, and Jenkins CI/CD pipelines** to streamline issue management life-cycles, reducing manual troubleshooting time by **40%** and enabling autonomous incident response across enterprise Java/.NET application stacks.
- Created **standardized technical playbooks and process documentation** in **Confluence** to enable Server Operations teams to manage and resolve workflow execution blockers autonomously, improving operational efficiency and establishing repeatable solutions across **change-control management** and post-implementation support cycles.
- Partnered with Engineering and Operations stakeholders to investigate root causes of negative business outcomes through **system design analysis, REST API integrations, and SQL data validation** across **PostgreSQL, MySQL, and Oracle** databases, delivering improvements to **ERP integrations and supply chain software stack reliability**.
- Managed project schedules and technical timelines for **full life-cycle project ownership** including design, development, maintenance, and long-term operational improvements, coordinating cross-functional UAT, post-go-live support, and continuous process optimization for enterprise business systems serving high service-level objective and service-level agreement requirements.
- Developed backend applications and automation solutions using **Java Spring Boot REST APIs, Python data pipelines, and Shell scripting** on **AWS infrastructure (EC2, S3, Lambda, CloudWatch)** with **Docker containerization**, supporting mission-critical supply chain and capacity fulfillment operations with enterprise-grade reliability and scalability.

SKILLS

Backend Development & System Design – Java Spring Boot, REST APIs, Python, Shell scripting, system design analysis, full life-cycle project ownership.

Cloud Infrastructure & Operations – AWS (EC2, S3, Lambda, CloudWatch), Docker containerization, Linux system administration, CI/CD (Jenkins, Git).

Data & Database Technologies – SQL (PostgreSQL, MySQL, Oracle), data modelling, data warehousing, ETL pipelines, Big Data concepts (Hadoop, Spark).

Monitoring, Observability & Incident Management – Splunk, Dynatrace, CloudWatch, SLA management, P1/P2 incident response, troubleshooting, operational metrics.

Enterprise Systems & Process Management – ERP integration support, change-control management, configuration management, cross-system integrations, process documentation (Confluence), Jira ticketing.

Data Analytics & Business Intelligence – Power BI (dashboards, DAX, Power Query), Tableau, R, statistical analysis, data visualization, business intelligence.

Specialized Domains – Enterprise customer support, high service-level objectives, workflow optimization, operational excellence, project scheduling and timeline management.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College
of Technology, Coimbatore, India

01/2021

PROJECTS

Data Center Workflow Execution Blocker Resolution Platform (HCL Technologies)

- Architected and deployed an **automated issue triage and root-cause analysis framework** using **Python, SQL, and Splunk** to diagnose supply chain software stack blockers across Google data center operations globally, reducing mean-time-to-resolution (MTTR) from **6 hours to 45 minutes** for **85% of recurring incidents**.
- Designed **standardized diagnostic playbooks and technical runbooks** documenting **system design patterns, API integration flows, and database validation checks** enabling Server Operations teams to autonomously investigate workflow blockers without Engineering escalation, improving **operational autonomy by 60%**.
- Built **backend automation services using Java Spring Boot and Shell scripts** integrated with **AWS Lambda and CloudWatch** to detect capacity fulfillment process failures in real-time, trigger automated remediation steps, and generate alert notifications, reducing manual intervention overhead by **75%** across **50+ data center operations globally**.
- Implemented **comprehensive monitoring dashboards using Splunk and CloudWatch** to visualize workflow execution metrics, SLA compliance, and operational blockers across interdependent backend systems, providing real-time visibility and enabling continuous improvement initiatives that achieved **99.7% service-level objective** compliance.
- Managed full project lifecycle including requirements gathering with Server Operations and Engineering stakeholders, sprint planning, UAT coordination across multiple data centers, post-deployment support, and iterative improvements to automation frameworks and processes over **18-month production tenure**.

Enterprise Payments Operations Monitoring & Optimization (HCL Technologies)

- Diagnosed and resolved **SWIFT messaging workflow blockers** and payment operations issues for a banking client using **REST API analysis, SQL transaction validation, and system design troubleshooting**, maintaining **99.8% uptime** for mission-critical **ISO 20022 message flows and SEPA cross-border payment processing**.
- Designed and implemented **operational monitoring playbooks** and **process documentation** for **change-control management** and **PSD2 / GDPR compliance** in production payment environments, enabling operations teams to resolve issues autonomously while maintaining regulatory audit trails and service-level agreement requirements.
- Optimized **backend application performance** through **Python ETL pipeline improvements and database query optimization** across **Oracle and PostgreSQL** infrastructure, reducing payment message processing latency by **35%** and improving transaction reconciliation throughput by **2.5 million messages daily**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
