PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **large-scale, real-time software systems** using **Java Spring Boot** and **REST APIs** for enterprise applications; developed feature work, bug fixes, and microservices handling millions of daily transactions across distributed infrastructure, achieving **99.9% uptime SLA** through proactive code review and testing best practices.
- Led **design reviews with peers and stakeholders** to evaluate technology trade-offs for performance optimization and system reliability; architected **network traffic monitoring and load balancing solutions** using **Splunk, CloudWatch, and Dynatrace** to analyze sources of infrastructure issues and minimize service degradation across global network operations.
- Triageed product and system issues through **debugging, root-cause analysis, and impact assessment** on hardware, network, and service operations; resolved **P1/P2 production incidents** affecting payment flows and transaction routing within SLA windows, reducing mean-time-to-resolution by **35%** through systematic log analysis and performance profiling.
- Developed **data structures and algorithms** for high-performance network packet processing and traffic classification using **C++** and **Python**; optimized query execution and data flow efficiency across interconnected systems, delivering **40% reduction in latency** for real-time network telemetry pipelines.
- Contributed to and maintained **system documentation and educational content** for network architecture design, CI/CD workflows, and operational runbooks; adapted knowledge-base articles based on infrastructure updates and post-go-live feedback, ensuring **100% code review coverage** and adherence to style guidelines across engineering teams.
- Managed **change-control processes and UAT coordination** for production deployments across **AWS (EC2, S3, Lambda), Docker containers, and Jenkins pipelines**; implemented accessibility testing and performance monitoring to ensure service reliability, compliance with SLOs, and optimal end-to-end network delivery for Google Cloud services.

SKILLS

Programming Languages & Core Systems – C++, Java, Python, SQL.

Software Architecture & Design – large-scale distributed systems, real-time system design, network architecture design, data structures and algorithms, performance optimization, REST API design.

Cloud & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux, Git, Jenkins CI/CD pipelines.

Monitoring, Observability & Reliability – Splunk, Dynatrace, CloudWatch, incident triage, SLA management, root-cause analysis, accessibility testing.

Data & Databases – PostgreSQL, MySQL, Oracle, data warehousing, ETL, query optimization.

Agile & Collaboration – Jira, Confluence, code review, design reviews, change management, UAT coordination, cross-functional stakeholder engagement.

EDUCATION AND TRAINING

**MASTER OF SCIENCE in Data Analytics – National College of
Ireland, Dublin**

02/2026

PROJECTS

Global Traffic Load Balancing & Network Optimization Engine (HCL Technologies)

- Architected a **real-time traffic engineering system** for optimized routing and load balancing across Google's simulated global network infrastructure, handling **10M+ network flows per second** with **sub-millisecond latency** using **C++** core compute and **Python** control-plane orchestration.
- Implemented **network performance optimization algorithms** and **data structures** for prefix-tree based packet classification and congestion detection; reduced network congestion incidents by **45%** through intelligent traffic steering and multi-path load balancing across interconnected data center clusters.
- Designed comprehensive **system monitoring and observability dashboards** using **Splunk and CloudWatch** to track network metrics, service level objectives, and business policies in real-time; automated anomaly detection and alerting to enable **P1 incident response within 5 minutes** of infrastructure degradation.
- Conducted **design reviews with infrastructure and platform teams** to validate trade-offs between routing latency, link utilization, and failover behavior; implemented **accessibility features for operational interfaces** ensuring all network engineers could diagnose and resolve traffic issues regardless of ability level.
- Established **change-control and deployment workflows** using **Jenkins pipelines, Git branching, and AWS infrastructure-as-code**; delivered quarterly releases maintaining **100% backward compatibility** while introducing new congestion-aware routing policies, validated through UAT with network operations teams.

Enterprise Payment Infrastructure Monitoring & Regulatory Compliance Platform (HCL Technologies)

- Built production-grade **monitoring and alerting systems** for a multi-billion-transaction SWIFT payment-operations dashboard, ensuring **99.95% service availability** and **sub-second transaction visibility** across global payment flows using **Java Spring Boot, PostgreSQL, and CloudWatch**.
- Implemented **data validation and reconciliation pipelines** using **Python ETL scripts and SQL** to enforce GDPR compliance, audit trail integrity, and regulatory reporting requirements; resolved **98% of payment discrepancies** within **24 hours** through systematic root-cause analysis.
- Designed **REST API integrations** connecting ERP systems, core banking platforms, and operational databases to provide unified transaction-flow visibility; engineered high-performance query optimization achieving **30% reduction in report generation time** for cross-border payment analytics.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
