PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Owned **rapid incident response and escalation management** for mission-critical production environments at HCL, triaging P1/P2 technical issues across enterprise Java/.NET applications using **Splunk, CloudWatch, and Dynatrace** monitoring tools; resolved critical incidents affecting SLA compliance with **15+ hour mean time to resolution** through distributed root-cause analysis and cross-team coordination.
- Debugged and resolved network-level issues in distributed systems by applying **packet capture analysis tools (tcpdump), traffic path tracing (mtr)**, and latency troubleshooting methodologies on **AWS infrastructure (EC2, Lambda, CloudWatch)** to identify and mitigate packet loss and latency violations in production workloads.
- Demonstrated financial exchange operations expertise through **SWIFT messaging (MT/MX) and ISO 20022 message flows** implementation on a banking client's payments-operations dashboard; advocated for customer needs across regulatory requirements including **GDPR compliance, audit trails, and financial services SLA management** in ultra-low-latency transaction processing environments.
- Authored and maintained **developer documentation, runbooks, and technical playbooks** for Java Spring Boot REST APIs, SQL schema changes, and infrastructure troubleshooting procedures; created training materials and operational guides for distributed systems integrations, improving customer onboarding velocity by **40%**.
- Developed **Python and Java scripts** for automated incident detection, change-control validation, and proactive system monitoring; implemented **CI/CD pipeline improvements in Jenkins** and **Git branching strategies** to reduce deployment risk and enable faster incident remediation across interconnected cloud-native systems.
- Engineered cross-system integrations using **REST APIs and database-level data flows** across **PostgreSQL, MySQL, and Oracle** to support ERP and business system change management; demonstrated expertise in system administration, configuration troubleshooting, and UAT coordination during critical post-implementation support phases affecting enterprise financial operations.

SKILLS

Programming & Debugging – Java, Python, C, SQL, Spring Boot, REST APIs, code debugging, scripting, software development.

Network Troubleshooting & Analysis – tcpdump, mtr, traceroute, Wireshark, packet capture, packet analysis, traffic path analysis, latency troubleshooting, packet loss diagnosis, ultra-low-latency systems (ULLS), networking fundamentals, networking protocols.

Cloud Infrastructure & DevOps – Google Cloud Platform (GCP), AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, CI/CD (Jenkins), Git, distributed systems, design patterns, best practices.

Monitoring, Observability & Incident Management – Splunk, Dynatrace, CloudWatch, crisis response, escalation management, SLA management, proactive incident response, issue triage, reliability engineering.

Financial Services & Exchange Operations – SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA payments, cross-border payments, PSD2, Open Banking, payments processing, financial exchange industry terminology, regulatory compliance (GDPR), audit trails.

Systems & Change Management – ERP integration, enterprise business systems, change-control management, UAT coordination, post-implementation support, system administration, documentation, Linux, shell scripting.

Content & Technical Communication – developer documentation, technical playbooks, IT administration guides, training materials, user guides, business stakeholder reporting, Power BI, Tableau, data visualization.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin

02/2026

BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India

01/2021

PROJECTS

Ultra-Low-Latency Financial Exchange Monitoring & Incident Response Platform (HCL Technologies)

- Architected and deployed a **real-time packet capture and latency analysis system** for mission-critical financial exchange workloads on **Google Cloud Platform**, integrating **tcpdump**, **mtr**, and **Wireshark-based traffic path analysis** to detect and isolate network-induced SLO violations caused by packet loss and latency spikes.
- Developed **Python-based anomaly detection scripts** that ingested raw packet capture data and network traces to identify critical latency patterns; reduced mean time to detect (MTTD) for latency violations from **45 minutes to 8 minutes**, enabling proactive escalation to financial exchange customers before SLA breach.
- Created comprehensive **technical runbooks and crisis response playbooks** documenting packet-level troubleshooting workflows, distributed systems debugging patterns, and escalation procedures; trained **12+ customer operations teams** and internal stakeholders on ultra-low-latency diagnostics, reducing customer escalation response time by **35%**.
- Implemented automated **change-control and pre-flight validation** using **Java Spring Boot microservices and SQL-based infrastructure auditing** to prevent latency-inducing configuration drift; integrated with **Jenkins CI/CD pipelines** to block risky deployments, maintaining **99.99% SLA uptime** across critical exchange operators.
- Established **knowledge base documentation and industry white papers** on networking protocols supporting ultra-low-latency systems, SWIFT/ISO 20022 payment message flows, and financial exchange operations best practices; published **8 technical articles** that became standard onboarding curriculum for **50+ Google Cloud solutions engineers**.

SWIFT MT/MX Payments Dashboard & Regulatory Compliance Automation (HCL Technologies)

- Engineered and maintained a **mission-critical SWIFT messaging dashboard** for a Tier-1 banking client, providing real-time transaction-flow visibility, operational alerting, and SLA monitoring for **ISO 20022 message formats** and **SEPA/cross-border payment processing** with **sub-second latency**.
- Embedded **GDPR compliance, audit trail logging, and regulatory reporting** into the dashboard infrastructure using **SQL (PostgreSQL/Oracle) data models and Power BI visualization**; automated monthly reconciliation workflows, reducing manual audit effort by **60 hours per month**.
- Collaborated with banking-domain business analysts and regulatory teams to translate **financial exchange operations requirements** into distributed system design; executed **change-control procedures and UAT coordination** for PSD2 and Open Banking compliance initiatives affecting **€2B+ daily payment volume**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)

- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
