PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Diagnosed and troubleshooted production blockers across enterprise **Java Spring Boot** and **.NET** applications using **Splunk, CloudWatch, and Dynatrace** monitoring frameworks, achieving **99.5% SLA compliance** through swift incident triage and root-cause analysis of P1/P2 issues affecting banking operations.
- Designed and iterated on automated internal tools and **Python** scripting frameworks to streamline issue management life-cycles, including **ETL data pipelines** and scheduled reporting dashboards that reduced mean-time-to-resolution by **40%** across global data center operations.
- Created standardized technical playbooks and process documentation using **Confluence** and **Jira** ticketing systems that enabled cross-functional **Server Operations** teams to manage and resolve workflow execution blockers autonomously, supporting **ISO 20022** message flows and **SEPA / cross-border payments** processing at scale.
- Partnered with Engineering and Operations stakeholders to investigate and fix root causes of negative business outcomes by analyzing **PostgreSQL, MySQL, and Oracle** database schema dependencies and **REST API** integrations across interconnected ERP and payments systems, delivering **15+ critical fixes** in production environments.
- Managed project schedules and timelines while participating in on-call duties and shift rotations, fostering engagement with **change-control management** processes and **UAT coordination** across multiple cross-functional partners in banking-domain production environments subject to regulatory compliance (**GDPR, PSD2, audit trails**).
- Developed backend automation solutions using **Shell scripting, Linux** log analysis, and **Jenkins CI/CD pipelines** integrated with **Git** version control, enabling **Docker** containerization of application deployments and reducing operational toil by **30%** across data center capacity fulfillment workflows.

SKILLS

Backend Development & System Design – Java Spring Boot, Python, Shell scripting, REST APIs, system integrations, backend application architecture, full life-cycle project ownership.

Cloud Computing & Infrastructure – AWS (EC2, S3, Lambda, CloudWatch), Docker, Linux systems administration, CI/CD (Jenkins, Git), change-control management.

Troubleshooting & Incident Management – Production support, SLA management, performance monitoring (Splunk, Dynatrace, CloudWatch), root-cause analysis, P1/P2 incident response, workflow execution blocker resolution.

Data & Big Data Technologies – SQL (PostgreSQL, MySQL, Oracle), ETL pipelines, data warehousing, Python data stack (pandas, NumPy), data modelling, Power BI dashboards, Tableau.

Enterprise Systems & Domain Expertise – ERP integration support, SWIFT messaging (MT/MX), ISO 20022 message flows, SEPA and cross-border payments, PSD2 Open Banking, regulatory compliance (GDPR), payments operations, supply chain software stack.

Process & Technical Consulting – Technical playbooks, process automation, Jira ticketing, Confluence documentation, Agile/Scrum ceremonies, UAT coordination, cross-functional stakeholder engagement, operational excellence metrics.

Additional Certifications & Credentials – IELTS Band 7/9, MSc Data Analytics (NCI, Dublin), Bachelor of Engineering Computer Science (SNS College, India), Full Stack Java Spring Boot & Angular.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Data Center Workflow Optimization & Supply Chain Software Stack Issue Resolution Platform (HCL Technologies)

- Architected and deployed a unified issue management automation framework integrating **Python ETL pipelines**, **PostgreSQL** backend data model, and **Jenkins CI/CD** orchestration to diagnose and resolve supply chain software blockers across global Google data center operations, reducing mean-time-to-recovery by **45%** and processing **10,000+ monthly workflow incidents**.
- Built standardized **Shell scripting** and **Linux** automation tools that enabled Server Operations teams to autonomously execute root-cause investigations on **ERP system** integrations and **REST API** dependencies, eliminating **60+ manual escalations per month** and achieving **98% first-contact resolution rate**.
- Designed operational dashboards in **Power BI** with **DAX measures** and **SQL** data models tracking SLA compliance, incident trends, and capacity fulfillment metrics, providing real-time visibility to **15+ cross-functional engineering and operations stakeholders** and driving **\$2.1M annualized operational cost savings**.
- Implemented change-control management workflows via **Jira** and **Confluence** that standardized software deployment and configuration update procedures across interconnected data center systems, reducing deployment-related incidents by **35%** and ensuring regulatory audit-trail compliance for all workflow modifications.
- Conducted technical consulting sessions with Google Server Operations leadership to translate system blockers into scalable process innovations, designing **15+ technical playbooks** covering capacity fulfillment workflows, enabling **12 operational teams** to manage and resolve issues autonomously without engineering escalation.

Enterprise Payments Operations Monitoring & SWIFT Message Flow Dashboard (HCL Technologies)

- Engineered production support infrastructure for banking-domain **SWIFT messaging** dashboard processing **ISO 20022** payment operations for cross-border and **SEPA** transactions, leveraging **Java Spring Boot** microservices, **Dynatrace** monitoring, and **PostgreSQL** transaction logging to achieve **99.8% uptime SLA** in regulated financial services environment.
- Collaborated with banking domain BAs and regulatory stakeholders to implement **GDPR, PSD2 Open Banking, and audit trail** compliance controls into payments operations workflows, ensuring data protection and transaction reconciliation integrity for **50+ daily cross-border payment corridors**.
- Developed **Python** data automation scripts and **ETL pipelines** to validate **ISO 20022 message flows**, reconcile **SEPA** transaction records, and generate compliance-ready operational reports, reducing manual validation effort by **70%** and eliminating **\$1.2M in annual settlement exceptions**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023

- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
