PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Developed and maintained **native Android applications using Kotlin and Java**, delivering production-grade mobile experiences across enterprise payment platforms; optimized application architecture to reduce memory footprint by **18%** and improved runtime performance through modular component design.
- Designed and implemented **modular, reusable Android SDK and framework components** for internal teams; architected **Android APIs and platform features** following MVVM and dependency-injection patterns, enabling **12+ consumer teams** to accelerate feature development by **30%**.
- Built comprehensive **unit and instrumentation tests** across Android applications using JUnit, Espresso, and Robolectric; achieved **85% code coverage** and reduced post-release defects by **35%** through automated testing pipelines integrated with **Jenkins CI/CD**.
- Collaborated with **product managers and cross-functional mobile engineering teams** to define Android architecture roadmaps and technical specifications; participated in **architectural decisions** for modular Android components, documenting designs in **Confluence** and driving team alignment through design reviews.
- Leveraged **AI-assisted development tools** including **GitHub Copilot** to accelerate Android development velocity and code quality; adopted AI-driven code suggestions for boilerplate reduction and pattern recognition, improving sprint throughput by **22%** while maintaining security and architectural standards.
- Implemented secure, scalable Android solutions for fintech payment operations; integrated mobile applications with backend **REST APIs** and **AWS infrastructure (Lambda, CloudWatch)**; ensured compliance with financial-services security requirements and regulatory standards across all mobile deployments.

SKILLS

Mobile Development (Android) – Kotlin, Java, Android SDK, Android APIs, Android framework development, native Android applications.

Android Architecture & Design – modular Android components, reusable SDK frameworks, MVVM, dependency injection, architectural decision-making.

Testing (Android) – unit testing (JUnit), instrumentation testing (Espresso), Robolectric, test automation, code coverage.

Development Tools & Platforms – GitHub Copilot, AI-assisted development, Git, Jenkins CI/CD pipelines, Jira, Confluence.

Backend & Cloud Integration – REST APIs, AWS (Lambda, CloudWatch), Docker, Linux, system integration, secure API design.

Fintech & Compliance – SWIFT messaging (MT/MX), ISO 20022, SEPA, payments processing, regulatory compliance, financial-services security standards.

Cross-Functional Collaboration – product management alignment, mobile engineering teams, architectural design reviews, UAT coordination, change management.

EDUCATION AND TRAINING

PROJECTS

Modular Android SDK & Payment Framework (HCL Technologies)

- Architected and shipped a **modular Android SDK framework** enabling rapid development of payment and financial-services mobile applications; designed **reusable Android SDK components** and **Android APIs** following MVVM and clean-architecture principles, reducing onboarding time for downstream teams by **40%**.
- Implemented comprehensive **unit and instrumentation tests** using **JUnit, Espresso, and Robolectric**; established automated testing pipelines in **Jenkins** achieving **88% code coverage** across SDK modules and reducing production defects by **42%** across **15+ consumer applications**.
- Designed **modular, reusable Android components** for payments operations, tokenization, and secure credential management; collaborated with **product managers and mobile engineering teams** to define SDK API contracts and participated in **architectural decisions** for scalability and regulatory compliance.
- Integrated **GitHub Copilot** and **AI-assisted development tools** into the SDK development workflow, accelerating boilerplate code generation and improving team velocity by **25%** while maintaining security and code-quality standards aligned with fintech compliance requirements.
- Built secure integration layers between mobile SDK and backend **REST APIs** running on **AWS (Lambda, CloudWatch)**; implemented end-to-end encryption, certificate pinning, and audit logging to ensure **ISO 20022 and SEPA compliance** across all payment message flows.

SWIFT Payments Operations Mobile Dashboard (HCL Technologies)

- Designed and developed a **native Android application** for real-time monitoring of **SWIFT messaging (MT/MX)** and payment operations; integrated **Android APIs** with backend systems to display transaction-flow visibility and operational alerting for **10,000+ daily payment messages**.
- Implemented **modular Android components** for payment reconciliation workflows, cross-border payment tracking, and **SEPA / ISO 20022** message parsing; utilized **Kotlin** to reduce code complexity by **30%** and improved application responsiveness for high-volume transaction environments.
- Collaborated with **banking-domain product managers and operations teams** to translate payment-operations requirements into mobile features; participated in **architectural decisions** for secure credential storage, tokenization support, and regulatory compliance logging aligned with GDPR and Open Banking (PSD2) standards.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
