PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Designed and implemented **enterprise-level security solutions** across **AWS cloud environments** (EC2, S3, Lambda, CloudWatch) using **Infrastructure as Code (IaC)** principles with **Terraform and CloudFormation** to enforce tamper-proof, audit-defensible deployment pipelines; reduced security misconfiguration incidents by **40%** through automated compliance validation.
- Developed secure, production-grade code in **Python and Java Spring Boot** implementing **IAM, authentication protocols (OIDC, SAML)**, and cryptographic controls across distributed microservices; conducted **code reviews and vulnerability assessments** on **20+ applications**, identifying and remediating **15+ critical security flaws** before production deployment.
- Executed **vulnerability assessments, penetration testing, and threat modelling** on multiple organizational assets and external-facing applications using **Splunk and Dynatrace** for real-time security monitoring; documented threat scenarios and recommended **business-critical modifications** during vulnerability windows, achieving **99.8% SLA compliance** in banking-regulated environments.
- Architected and deployed **cloud-native applications** leveraging **AWS data analytics services (Redshift, Lake Formation)** and **SaaS data platforms (Snowflake, Databricks)** to ingest, transform, and secure financial transaction data; implemented **encryption at rest and in transit** across data pipelines processing **10M+ daily records** while maintaining regulatory compliance.
- Designed enterprise security controls for **GDPR and regulatory compliance** across interconnected banking systems; collaborated with stakeholders and business leaders to translate security requirements into technical implementations across **ERP integrations, REST APIs, and database-layer data flows** (PostgreSQL, Oracle, MySQL), supporting **PSD2/Open Banking** compliance for cross-border payment operations.
- Minimized security vulnerabilities through continuous evolution of **security protocols and controls** by monitoring industry insights and governmental regulations; developed Python-based automation scripts for **threat detection, anomaly identification, and audit log analysis** across infrastructure, reducing mean-time-to-remediation (MTTR) from **6 hours to 45 minutes**.

SKILLS

Cloud & Infrastructure Security – AWS (EC2, S3, Lambda, CloudWatch, Redshift, Lake Formation), Terraform, CloudFormation, Infrastructure as Code (IaC), cloud-native application architecture.

Cybersecurity & Authentication – IAM, Authentication Protocols, OIDC, SAML, encryption at rest and in transit, vulnerability assessments, penetration testing, threat modelling, cryptographic controls.

Secure Software Development – Python, Java Spring Boot, secure code design, code review, vulnerability remediation, REST API security, tamper-proof audit-defensible methods.

Data Security & Compliance – Snowflake, Databricks, GDPR, PSD2/Open Banking, regulatory compliance, secure data pipelines, Lake Formation, audit trail design, ISO 20022 message flows.

Security Monitoring & Analysis – Splunk, Dynatrace, threat detection, anomaly identification, real-time security monitoring, SLA management, P1/P2 incident response.

Enterprise Systems & Databases – PostgreSQL, MySQL, Oracle, ERP integrations, business system interconnections, change-control management, data modelling, SQL optimization.

Languages & Tools – Python, Java, SQL, Git, Jenkins, Jira, Linux, shell scripting, Power BI, Tableau, R, pandas, NumPy, scikit-learn.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Cloud-Native Security Data Platform with Real-Time Threat Intelligence & Compliance Audit Trail (HCL Technologies)

- Architected and deployed a **cloud-native security analytics platform** on **AWS (Redshift, Lake Formation, EC2, Lambda)** integrated with **Snowflake** to centralize and correlate security events from **50+ enterprise applications** across multiple business functions; implemented **Infrastructure as Code (Terraform/CloudFormation)** for reproducible, audit-defensible infrastructure provisioning.
- Engineered **Python-based data pipelines** using **pandas, NumPy, and scikit-learn** to perform real-time anomaly detection and threat scoring on **500M+ daily security events**; reduced false-positive alert rate by **65%** through machine-learning-driven behavioral baseline modelling.
- Implemented **IAM, OIDC/SAML authentication, and encryption controls** across the platform; designed **GDPR-compliant audit trails** and regulatory reporting dashboards in **Power BI and Tableau** for stakeholder visibility into security posture and control effectiveness.
- Developed **automated threat modelling workflows** and **vulnerability assessment scripts** that discovered **18 critical misconfigurations** in cloud-deployed services; recommended and implemented **business-critical security modifications** that reduced risk exposure by **72%** while maintaining **99.9% system uptime**.
- Collaborated with security, engineering, and business leaders to translate **compliance requirements (PSD2, regulatory standards)** into technical controls; delivered comprehensive **security design documentation** and conducted knowledge-transfer sessions with **12-person cross-functional team**.

SWIFT Payments Security & Compliance Monitoring Dashboard (HCL Technologies)

- Built and operationalized a real-time **SWIFT messaging security dashboard** for a global banking client, monitoring **ISO 20022 message flows, MT/MX formats, and SEPA/cross-border payment operations**; implemented **Splunk-based threat detection** and **audit-defensible logging** for regulatory compliance and incident response.
- Designed **tamper-proof control mechanisms** and **encryption protocols** for payment message authenticity; reduced unauthorized transaction attempts by **58%** through real-time anomaly detection and **P1/P2 incident response automation**.
- Coordinated **UAT, change-control processes, and post-go-live support** across interconnected ERP and payment systems; ensured **100% compliance** with **GDPR data protection** and banking regulatory frameworks during **3 major production releases**.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
