PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – HCL Technologies | Chennai, India

09/2021 – 01/2025 (3.5 Years)

- Owned end-to-end customer and partner issue triage and resolution for enterprise Java/Spring Boot and Python applications, investigating **data mismatches, integration failures, and edge cases** by reading **application logs**, writing **SQL queries** across PostgreSQL/MySQL/Oracle, and reproducing issues in lower environments; resolved **95% of P1/P2 incidents within SLA** targets through root-cause analysis and scoped configuration or code fixes.
- Implemented safe, well-scoped technical fixes including **configuration updates, data corrections, and small code changes** to resolve integration issues; escalated larger engineering work via ticketing systems with clear context, reproduction steps, and diagnostic data, reducing mean time to resolution by **40%** and serving as the primary triage layer between customer-facing channels and engineering teams.
- Served as the first technical point of contact for embedded integration partners, communicating clearly with urgency in plain language; coordinated with onboarding teams to ensure smooth transitions from integration setup through go-live, managed support escalations throughout the customer lifecycle, and maintained SLA adherence through proactive status updates and expectation management.
- Maintained structured voice-of-customer tracking by logging recurring issues monthly, identifying patterns across **50+ customer accounts**, and presenting findings to product and engineering leadership to drive long-term systemic fixes; distinguished between immediate tactical resolutions and product-level improvements, contributing to **25% reduction in duplicate issue reports**.
- Developed and maintained comprehensive internal documentation, runbooks, and post-incident review processes using **Confluence and Jira**; defined escalation frameworks and thresholds for integration failures, enabling junior support staff to resolve **60% of common issues** independently and establishing standardized triage workflows.
- Monitored application health and operational metrics using **CloudWatch, Splunk, and Dynatrace**; queried customer databases and API logs to isolate integration failures, validate data flows, and confirm resolution; coordinated with cross-functional **FDE teams and engineering** on complex multi-system issues involving **REST API integrations and database-level data synchronization** across interconnected platforms.

SKILLS

Technical Support & Incident Management – end-to-end issue ownership, SLA management, root-cause analysis, triage and escalation frameworks, post-incident reviews, runbook development.

Database & Log Analysis – SQL query writing (PostgreSQL, MySQL, Oracle), application log inspection, data validation, data mismatch investigation, edge-case reproduction.

Application Monitoring & Observability – CloudWatch, Splunk, Dynatrace, operational dashboarding, integration failure diagnosis, performance metric tracking.

Development & Integration Troubleshooting – Java Spring Boot, Python, REST API integration debugging, configuration updates, safe scoped code changes, multi-system data flow validation.

Partner & Customer Communication – technical escalation communication, expectation management, status reporting, cross-functional coordination with onboarding and engineering teams.

Documentation & Process Improvement – Confluence, Jira, voice-of-customer tracking, issue pattern analysis, process automation, knowledge base development, SLA definition.

Infrastructure & Deployment – AWS (EC2, S3, Lambda, CloudWatch), Docker, Git, Jenkins CI/CD, Linux command-line, shell scripting.

EDUCATION AND TRAINING

MASTER OF SCIENCE in Data Analytics – National College of Ireland, Dublin	02/2026
BACHELOR OF ENGINEERING in Computer Science – SNS College of Technology, Coimbatore, India	01/2021

PROJECTS

Embedded Integration Health & Triage Platform (HCL Technologies)

- Designed and built a comprehensive **SQL-based diagnostic query library** to automatically detect and categorize the **top 15 recurring integration failure patterns** across **40+ embedded partner accounts**; queries integrated with **Splunk dashboards** to surface data mismatches, API timeouts, and configuration drift in real time, reducing manual investigation time by **65%**.
- Developed a **Python ETL automation script** to aggregate customer logs from multiple sources (CloudWatch, application traces, database audit trails), correlate events across system boundaries, and generate structured incident reports with root-cause context; script executed nightly via **Jenkins CI/CD pipelines**, enabling triage teams to identify issues **24 hours before customer escalation** in **35% of cases**.
- Created an interactive **Power BI dashboard** tracking customer support metrics including issue volume by category, mean time to resolution, SLA adherence rate, and partner satisfaction; implemented **DAX measures** to flag recurring issues and forecast engineering capacity; dashboard surfaced **5 critical systemic product gaps** that engineering prioritized, reducing new-customer integration failures by **42%**.
- Built and maintained a **Confluence-based runbook library** documenting resolution steps for **80+ known integration scenarios** (data sync failures, webhook timeouts, schema validation errors, payment processing edge cases), complete with diagnostic queries and safe configuration fixes; runbooks reduced support escalations to engineering by **55%** and enabled junior team members to own **60% of incoming tickets** independently.
- Established a structured **post-incident review process** and escalation decision framework, distinguishing between immediate tactical fixes (configuration updates, data corrections) and long-term product solutions; framework reduced duplicate incidents by **38%** over six months and improved communication accuracy between support and engineering teams by **50%**.

SWIFT Payments Dashboard – Production Support & Integration Health Monitoring (HCL Technologies)

- Owned production support for a **SWIFT messaging and payments-operations dashboard** serving a Tier-1 banking client; monitored transaction flows using **Dynatrace and CloudWatch**, managed **P1/P2 incident response** with **99.5% SLA adherence**, and coordinated resolution with banking operations teams and BAs to ensure payment message visibility and regulatory audit-trail compliance.
- Investigated payment reconciliation discrepancies and **ISO 20022 message format violations** by writing **SQL queries** against Oracle backend schemas to validate SEPA and cross-border payment flows; identified and triaged **edge cases in PSD2 Open Banking integrations**, ensuring GDPR and data-protection compliance for customer financial data.
- Coordinated cross-functional **change-control management** for system configuration updates and UAT testing; worked with banking-domain BAs and operations teams on requirements gathering and post-implementation triage, reducing go-live defects by **30%** and improving UAT sign-off velocity.

ACHIEVEMENTS & CERTIFICATIONS

- IELTS Academic: Overall Band Score **7 out of 9**, issued by IELTS Official, Test Date: 28/AUG/2023
- **Full Stack: Java Spring Boot** and Angular (Great Learning)
- Certificate of Completion in Web Development from **University of California, Davis** (Coursera)
- Certificate of Completion in Python programming from **University of Michigan** (Coursera)
